

**EXHIBIT 1-6  
TOWN OF DEERFIELD  
SOIL LIMITATIONS FOR  
SEPTAGE SPREADING**

-  NONE TO SLIGHT - Soils relatively free of limitations that affect the intended use or the limitations are easy to overcome.
-  MODERATE - Soils with moderate limitations resulting from the effects of slope, wetness, soil texture, soil depth, groundwater, etc. Normally the limitations can be overcome with correct planning, careful design, and good management.
-  SEVERE - Soils with severe limitations resulting from the effects of slope, wetness, soil texture, highwater table, etc. Soils rated as having a severe limitation are severe enough to make the use of the soil doubtful for the proposed use. Careful planning and above-average design and management are required. This often includes major soil reclamation work.
