**TOWN BOARD**

Wayne Mentink, Chairman

Alan Anderson, Clerk

Virgil Cole, Treasurer

Greg Foster, Supervisor

Neal Strehlow, Supervisor

This report describes existing conditions for the Town of Mt. Morris, Waushara County.

**TABLE OF CONTENTS**

**Executive Summary**..... ES-1
*A brief description of the location of the community, planning purpose, background of the planning effort, and enabling legislation.*

**Chapter 1: Issues and Opportunities** ..... 1-1
*Background information including population, household and employment forecasts, demographic trends, age distribution, education and income levels and employment characteristics.*

**Chapter 2: Housing** ..... 2-1
*An assessment of the age, structural, value and occupancy characteristics of existing housing stock; identification of polices and programs that promote the development of housing and provides a range of housing choices that meets the needs of persons of all income levels, age groups and special needs; promotes the availability of land for development or redevelopment of low and moderate income housing; and maintains or rehabilitates the existing housing stock.*

**Chapter 3: Transportation** ..... 3-1
*A compilation the various modes of transportation, including highways, transit, transportation systems for persons with disabilities, bicycles, walking, railroads, air transportation, trucking and water transportation.*

**Chapter 4: Utilities and Community Facilities** ..... 4-1
*Background information for utilities and community facilities such as sanitary sewer, storm water management, water supply, solid waste disposal, on-site wastewater treatment technologies, recycling facilities, parks, telecommunication facilities, power-generating plants and transmission lines, cemeteries, health and child care facilities, police, fire and rescue facilities, libraries, schools and other governmental facilities.*

**Chapter 5: Agricultural, Natural, Cultural Resources** ..... 5-1
*A compilation of the maps, programs and background information for the conservation, and effective management of natural resources such as groundwater, forests, productive agricultural areas, environmentally sensitive areas, threatened and endangered species, stream corridors, surface water, floodplains, wetlands, wildlife habitat, metallic and nonmetallic mineral resources, parks, open spaces, historical and cultural resources, community design, recreational resources and other natural resources.*

**Chapter 6: Economic Development**..... 6-1
*An analysis of the labor force, economic base, and an assessment of categories or particular types of new businesses and industries that are desired, along with the strengths and weaknesses with respect to attracting and retaining these businesses and industries.*

**Chapter 7: Intergovernmental Cooperation**..... 7-1

*A compilation of programs and background information for joint planning and decision making with other jurisdictions, including the school and sanitary districts, counties and adjacent local governmental units, for siting and building public facilities and sharing public services.*

**Chapter 8: Land Use**..... 8-1

*A compilation of background information, maps and programs including the amount, type, intensity and net density of existing land uses such as agricultural, residential, industrial and other public and private uses; an analyzes of the trends in supply, demand and the price of land, opportunities for redevelopment and existing and potential land-use conflicts.*

Appendices

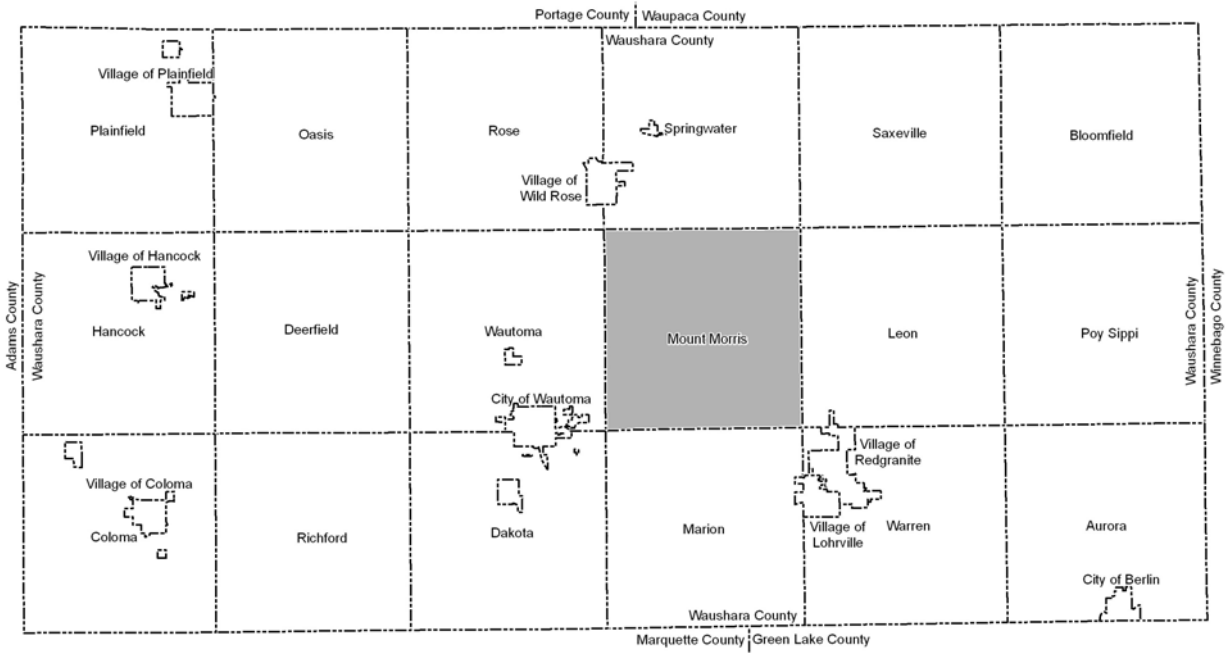
A Issues and Opportunities
B Housing
C Transportation
D Agricultural, Natural, and Cultural Resources
E Economic Development

# EXECUTIVE SUMMARY

## Location

Waushara County is located in central Wisconsin and is surrounded by the counties of Portage and Waupaca to the north, Winnebago to the east, Green Lake and Marquette to the south and Adams County to the west. The county is essentially six towns in width and three towns in height. The Town of Mount Morris is situated in the center of the eastern half of Waushara County and is approximately 36 square miles in size. It shares a common border with the towns of Springwater, Saxeville, Leon, Warren, Marion, Dakota, Wautoma and Rose. CTH G provides access to the Village of Wild Rose and STH 22, while STH 152 allows for movement to the City of Wautoma and the STH 21 corridor.

**Figure ES-1. Town of Mount Morris, Waushara County Wisconsin**



The Town of Mount Morris offers residents a small town atmosphere while providing nearby access to many services and amenities (schools, libraries, post offices, etc.) offered in urban areas. The Mount Morris County Park is situated in the center of the Town near the unincorporated community of Mount Morris. Nordic Mountain ski hill is located in the park and draws visitors' from nearby counties. The Town consists of a mix of woodlands (63%), farms (13%) and residential development that is both scattered and clustered around numerous lakes.

## Planning Purpose

A comprehensive plan is created for the general purpose of guiding a coordinated development pattern. This will result in land use decisions that are harmonious with both the overall vision of the community's future and will ensure the future sustainability of the local natural resource base. Developing a comprehensive plan is a proactive attempt to delineate the ground rules and guidelines for future development within a community. Comprehensive planning decisions evaluate existing facilities and future needs; promote public health, safety, community

aesthetics, orderly development, and preferred land use patterns; and foster economic prosperity and general welfare in the process of development.

The comprehensive plan is a guideline for future development. The plan evaluates what development will best benefit the community's interests in the area while still providing flexibility for land owners and protecting private property rights.

## Planning History

Planning in Waushara County started in 1994, with the creation of the Waushara County Land Use Committee. The committee, comprised of elected officials and local citizens, includes representation from each community in Waushara County. Similar to the Land Management Plan that was adopted by the Town of Mount Morris in 2002, many of the earlier plans that were developed in Waushara County were started before or immediately after the state implemented its current comprehensive planning law and consequently do not conform to the "smart growth" legislation. The Town of Mount Morris is one of these communities and has therefore prepared this plan as an update to its previously completed community management plan.[1] In total eleven communities (towns of Coloma, Deerfield, Hancock, Leon, Mount Morris, Oasis, Plainfield, Richford, Saxeville, Springwater and the Village of Hancock) participated in a countywide process to update their community/land management plans. Another three communities (villages of Coloma, Lohrville and Plainfield) completed their first comprehensive land use plan. Finally, a countywide plan was created that combines the plans of the various municipalities. The current plans were prepared in compliance with *Wisconsin State Statutes* 66.1001 and utilized a comprehensive planning grant obtained through the Department of Administration.

## Enabling Legislation

This plan was developed under the authority granted by s. 66.1001 of the *Wisconsin State Statutes* and meets the requirements of 1999 Wisconsin Act 9 which states "Beginning on January 1, 2010, any program or action of a local governmental unit that affects land use shall be consistent with that local governmental unit's comprehensive plan".[2]

The Town of Mount Morris should consult this plan when making decisions relative to land use and other issues including:

- Official mapping established or amended under s. 62.23 (6).
- Local subdivision regulation under s. 236.45 or s. 236.46. (If applicable)
- County zoning ordinances enacted or amended under s. 59.69.
- Town zoning ordinances enacted or amended under s. 60.61 or 60.62. (If applicable)
- Zoning of shorelands or wetlands in shorelands under s. 59.692, 61.351, or 62.231.

## Plan Contents

The Town of Mount Morris Comprehensive Plan is composed of two documents – Volume One and Volume Two. Together, the two volumes contain all information necessary to meet state

[1] ECWRPC. 2002. *Town of Mount Morris Land Management Plan*.
[2] Wisconsin Legislative Reference Bureau. 1997. *Budget Brief 97-6*.

regulations. The purpose of the two reports is to create a user-friendly plan that separates a majority of the required background material from the Town's goals, objectives, and recommendations. Generally speaking, Volume One serves as the "guide" for decision making whereas Volume Two provides data and support for actions detailed in Volume One. Specific details are provided below for each volume.

Volume One: "Comprehensive Plan (Goals, Objectives, and Recommendations)". This volume contains issues, goals, objectives, and recommendations for each of the nine required comprehensive plan elements for implementation over the next twenty years. It describes actions and strategies to achieve the goals and objectives listed in each of the nine planning elements, or chapters, within the plan. This document should be consulted by the Planning Commission and Town Board when managing community resources. It will also be used by Waushara County on matters where a county land use control, such as zoning, is applied within the town.

Volume Two: "Existing Conditions Report". The second volume of this comprehensive plan contains an analysis of existing conditions within the County. It provides a series of Census and other empirical data available through local, regional, state, and national sources. These data reveal current findings within the Town and how these compare to historical numbers within the Town, County and the State of Wisconsin. These data were primarily used to identify challenges and opportunities in Volume One. The report is a companion document to Volume One and should be used to locate evidence of existing conditions that provide support for recommendations and strategies located in Volume One.

The comprehensive plan contains nine elements that are required by s. 66.1001:

1) Issues and Opportunities
2) Economic Development
3) Housing
4) Transportation
5) Utilities and Community Facilities
6) Agricultural, Natural, and Cultural Resources
7) Land Use
8) Intergovernmental Cooperation
9) Implementation

In addition, the state requires that Wisconsin's 14 goals for local planning be considered as communities develop their goals, objectives, and strategies. These goals are:

1) Promotion of the redevelopment of lands with existing infrastructure and public services and the maintenance and rehabilitation of existing residential, commercial, and industrial structures.
2) Encouragement of neighborhood designs that support a range of transportation choices.
3) Protection of natural features, including wetlands, wildlife habitats, lakes, woodlands, open spaces, and groundwater resources.
4) Protection of economically productive farmlands and forests.
5) Encouragement of land uses, densities, and regulations that promote efficient development patterns and relatively low municipal, state governmental, and utility costs.
6) Preservation of cultural, historic, and archeological sites.

7) Encouragement of coordination and cooperation among nearby units of government.
8) Building of community identity by revitalizing main streets and enforcing design standards.
9) Providing an adequate supply of affordable housing for individuals of all income levels throughout each community.
10) Providing adequate infrastructure and public services and an adequate supply of developable land to meet existing and future market demand for residential, commercial, and industrial uses.
11) Promoting the expansion or stabilization of the current economic base and the creation of a range of employment opportunities at the state, regional, and local levels.
12) Balancing individual property rights with community interests and goals.
13) Planning and development of land uses that create or preserve varied and unique urban and rural communities.
14) Providing an integrated, efficient, and economical transportation system that affords mobility, convenience, and safety and that meets the needs of all citizens, including transit-dependent and disabled citizens.

## CHAPTER 1: ISSUES AND OPPORTUNITIES

# CHAPTER 1: ISSUES AND OPPORTUNITIES

## INTRODUCTION

Socioeconomic conditions and growth patterns have implications for the future health and vitality of communities. They help define existing problems and identify available socioeconomic resources. They also represent the current and future demands for services and resources. Changes in population and households combined with existing development patterns and policy choices will determine how well the Town of Mount Morris will be able to meet the future needs of their residents.

## INVENTORY AND ANALYSIS

This section of the chapter provides a brief summary of historic population growth, followed by more detailed information regarding current population and household characteristics of the region. Population and socioeconomic trends are identified and potential future growth and development patterns are discussed. Characteristics examined include age, race, income and household types. Current and potential population and socioeconomic issues are noted. Their potential impacts and policy implications will be discussed in the remaining comprehensive plan element chapters. The remainder of this chapter will briefly describe the policy context, discuss the need for intergovernmental cooperation, assess current and future trends and identify issues that need to be addressed.

### Demographic Trends

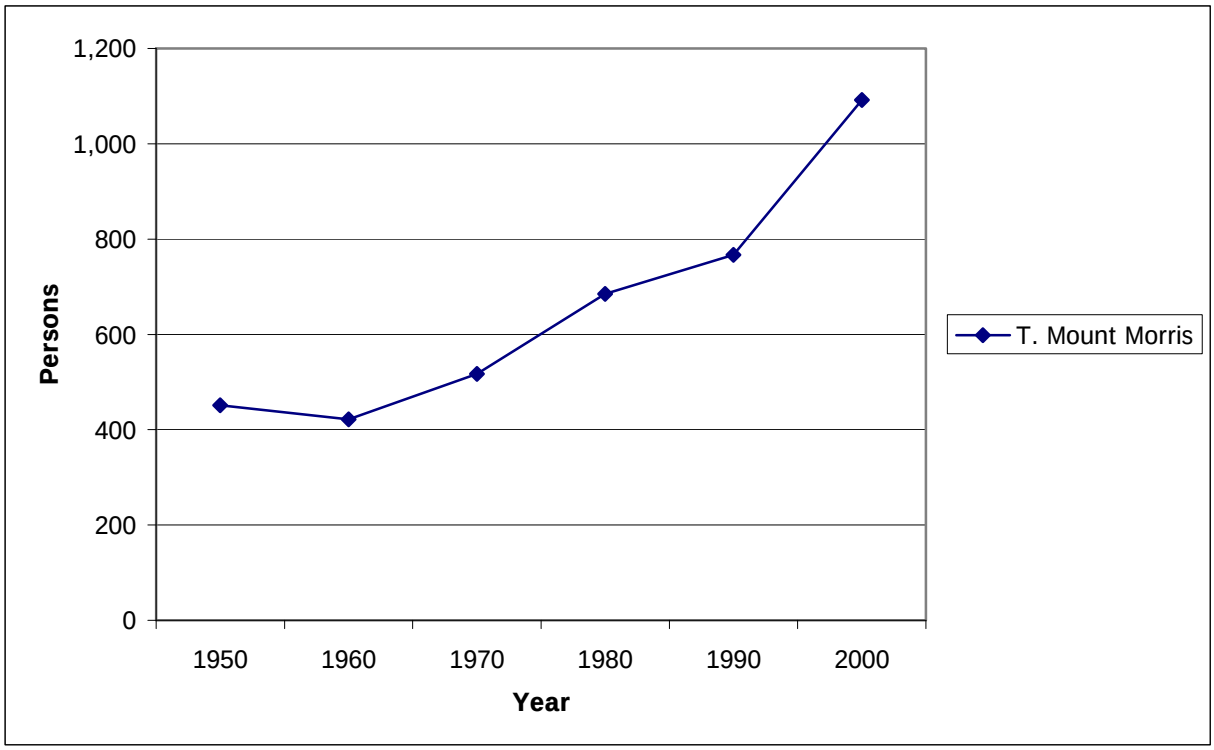
#### *Historic Population*[1]

***Over the past fifty years, the population of the Town of Mount Morris has increased. The population decreased slightly from 1950 (451) to 1960 (422), then increased to a year 2000 population of 1,092.*** (Appendix A, Table A–1).

Between 1950 and 2000, population growth in the Town of Mount Morris was greater than Waushara County and Wisconsin. During this time period the Town of Mount Morris population increased by 142 percent. Population increases at the county, region and state level exceeded 55 percent, with the region experiencing the largest increase, 66.1 percent. 2005 population estimates from the Wisconsin DOA indicate that recent growth trends are more in line with regional, county and state growth patterns. Since 2000, Mount Morris population has increased by 2.5 percent, compared to 8.0 percent at the county level, 4.8 percent at the regional level and 4.0 percent at the state level.

[1] U.S. Census: 1950, 1960, 1970, 1980, 1990, 2000; WI DOA 2001-2005.

**Figure 1-1. Historic Population Change, 1950 to 2000**



*Source: U.S. Census: 1950, 1960, 1970, 1980, 1990, and 2000*

### *Components of Population Change*

The two components of population change are natural increase and net migration. Natural increase is calculated by subtracting deaths from births during a specific time period. Net migration is, in theory, the number of people leaving an area (out-migrants) subtracted from the number of people coming into an area (in-migrants). However, since no convenient way of determining the movement of people on a regular basis exists, net migration must be estimated. Net migration can be estimated based on survey data, information from census questions, IRS data or calculated by subtracting natural increase from total population change. Net migration estimates may vary depending on which methodology is used. Data from the University of Wisconsin-Extension Applied Population Laboratory (APL) and the Wisconsin DOA, for example, show similar trends, but their net migration estimates vary.

An examination of the data provided by the University of Wisconsin-Extension APL and the Wisconsin DOA indicate that since 1950, ***migration has played a greater role in population change in Waushara County than natural increase.*** With the exception of the 1950s, Waushara County has experienced a positive net migration rate (Tables 1-1 and 1-2). Furthermore, the rate of net migration in Waushara County has exceeded the overall Wisconsin net migration rates each decade since 1980, which indicates that Waushara County is attracting residents from other parts of Wisconsin.

**Table 1-1. Net Migration Estimates, 1950 to 1990**

| | Waushara County | | Wisconsin | |
|---|---|---|---|---|
| | Net Migration | Total Change | Net Migration | Total Change |
| 1950 to 1960 | -8.6% | -3.0% | -1.4% | 15.1% |
| 1960 to 1970 | 6.4% | 9.6% | 0.2% | 11.8% |
| 1970 to 1980 | 17.7% | 25.2% | 0.2% | 6.5% |
| 1980 to 1990 | 7.3% | 4.6% | 2.7% | 4.0% |

*Source: UWEX Applied Population Laboratory, "Net Migration by Age for Wisconsin Counties, 1950-1990".*

The role of migration in the county's population growth became more important in the 1990s and early 2000s, when the rate of natural increase fell below zero. ***Since natural increase rates were negative, the entire increase in population in Waushara County since 1990 can be attributed to in-migration*** (Table 1-2).

**Table 1-2. Components of Population Change, Waushara County**

| | Numeric Change | | | Percent Change | | |
|---|---|---|---|---|---|---|
| | Natural Increase | Net Migration | Total Change | Natural Increase | Net Migration | Total Change |
| 1970-1980 | 215 | 3,516 | 3,731 | 1.5% | 23.8% | 25.2% |
| 1980-1990 | 448 | 411 | 859 | 2.4% | 2.2% | 4.6% |
| 1990-2000 | -23 | 3,792 | 3,769 | -0.1% | 19.6% | 19.4% |
| 2000-2005 est. | -131 | 1,983 | 1,852 | -0.6% | 8.6% | 8.0% |

*Source: Population Trends in Wisconsin: 1970-2000, WI DOA, 2001; WI DOA, 2005.*

Waushara County migration patterns also varied by age[2] (Appendix A, Table A-2). Between 1990 and 2000, young families (age 30 to 44 yrs) and baby boomers (age 45 to 64) moved to Waushara County. During this time period, Waushara County lost population in two other age groups, as many individuals ages 20 to 29 and individuals age 75 and older migrated out of the county. The net loss of young adults is likely attributable to two factors. First, many students leave the county to attend college. Others may have relocated in search of affordable housing and better employment opportunities. The out-migration of elderly individuals likely resulted from a need or desire for additional services. As people age, many eventually need or desire a wider variety of housing, healthcare, support services and transportation options than are available in rural communities.

### *Population Density[3]*

Population density reflects the degree of urbanization and impacts the demand and cost effectiveness of urban service provision. Over time, urban growth and suburbanization within Waushara County has expanded, and settlement patterns have increased in density. In 2000,

[2] WI DOA, 2005.
[3] U.S. Census, 2000.

population densities for Waushara County towns ranged from 12 to 62 persons per square mile. ***Population density in the Town of Mount Morris was less than the county average, with an average of 32 persons per square mile*** (Appendix A, Table A-3). The average population density for Waushara County was 37 persons per square mile, which was considerably less than the state average of 82 persons per square mile.

### *Age Distribution*

The age structure of a population impacts the service, housing and transportation needs of a community. Communities with growing school age populations may need to expand school facilities. Communities with growing elderly populations may need to expand healthcare, housing options and transportation services. Currently, the largest age cohort within the region and the state is the "baby-boom" generation, which includes those individuals born between 1945 and 1965. These individuals have had, and will continue to have, a significant impact on service and infrastructure needs within the Town.

The change in population by age cohort between 1990 and 2000 indicates that the area's population is aging[4] (Appendix A, Tables A-4 and A-5). The Town of Mount Morris experienced an increase in the share of persons in the 5 to 19 year, 20 to 24 year, 45 to 64 year and 65year and older age cohorts. Decreases were experienced in the less than 5 year and the 25 to 44 year age cohorts.

The increase in the number of working age individuals can be attributed to in-migration of individuals age 30 and older and the aging of the baby-boomers. The Town of Mount Morris experienced a slight increase in residents age 65 and older could indicate that some Mount Morris residents are choosing to age in place or that residents are choosing to retire to the Town.

Median age divides the age distribution of the population in half. One half of the population is younger than the median age, while the other half of the population is older than the median age. As a result, the median age of the population provides some insight to the overall population structure within a community. Median age can and does vary over space and time. Changes in population compositions resulted in most Waushara County communities experiencing an increase in median age between 1990 and 2000[5] (Appendix A, Tables A-4 and A-5).

In 1990, the Town of Mount Morris had the third oldest median age in Waushara County at 45.8 years, which was older than Waushara County at 38.6 years. Between 1990 and 2000, the median age increased by 1.4 years in the Town of Mount Morris, and as a result the Town had the fourth oldest median age in the county. The Town of Mount Morris had a higher median age than the state in 1990 and 2000. In Waushara County the median age rose from 38.6 years in 1990 to 42.1 years in 2000. In Wisconsin, the median age increased from 32.9 years in 1990 to 36.0 years in 2000. While in the Town of Mount Morris the median age increased from 45.8 years to 47.2 years.

[4] U.S. Census; 1990, 2000.
[5] U.S. Census; 1990, 2000.

## Household Structure

### *Household Size*

Household size and changes in household structure help define the demand for different types and sizes of housing units. The composition of a household coupled with the level of education, training, and age also impact the income potential for that household. It also helps define the need for services such as child care, transportation, and other personal services. Decreases in household size create a need for additional housing units and accompanying infrastructure, even if no increase in population occurs.

***Household size for the Town of Mount Morris and Waushara County has been decreasing since 1970***[6] (Appendix A, Table A-21). ***The Town of Mount Morris had an average household size of 2.4 in 1990, and then dropped slightly to 2.3 in 2000***. This decline is from the decrease of three, four, and five person households, and an increase in one and two person households. (Appendix A, Tables A-6 and A-7)

### *Household Composition*[7]

***In 1990 and 2000, the majority of households for the Town of Mount Morris were family households, and the majority of family households were married couple families*** (Appendix A, Tables A-8 and A-9). Between 1990 and 2000, the Town experienced a decrease in the share of family households and married couple families and an increase in the share of nonfamily households. In 1990, the share of family households ranged from 70.0 percent of all households in Wisconsin to 74.9 percent of all households in the Town of Mount Morris. By 2000, the share of family households ranged from 66.5 percent of all households in Wisconsin to 71.7 percent of all households in the Town of Mount Morris. The share of single parent family households increased in the state (13.3%) and the county (10.5%) but decreased in the Town of Mount Morris (8.5%). The state had the largest share of single parent family households and nonfamily households in both years (Figure 1-2.).

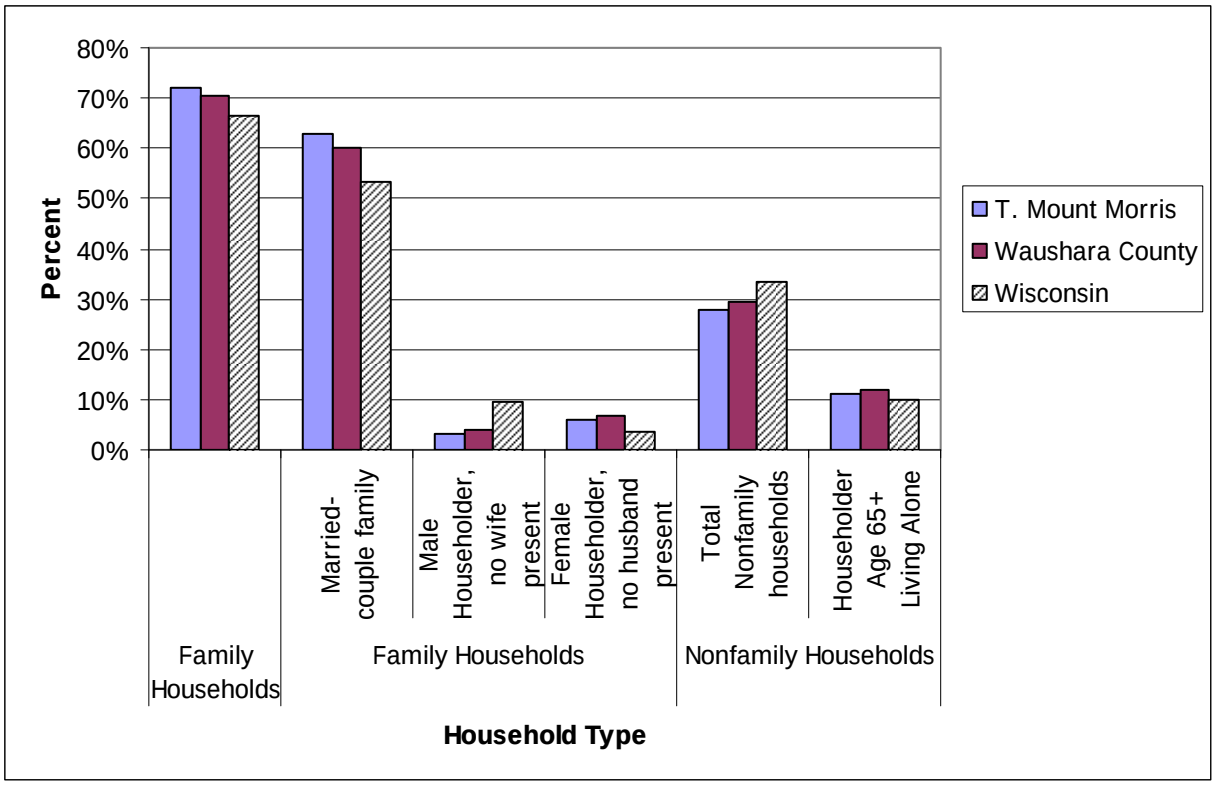
In 1990, householders age 65 or older and living alone ranged from 13.8 percent in Waushara County to 10.5 percent in Wisconsin. About twelve percent (11.6%) of elderly householders lived alone in the Town of Mount Morris in 1990. Between 1990 and 2000, the share of elderly householders living alone decreased in all three jurisdictions. By 2000, elderly householders living alone ranged from 11.9 percent of all households in Waushara County to 9.9 percent in Wisconsin. Approximately 11 percent (11.4%) of householders age 65 and older lived alone in the Town of Mount Morris.

While householders age 65 or older and living alone comprises a very small share of the total households, their numbers are increasing overall in Waushara County. Between 1990 and 2000, the combined number of householders age 65 or older and living alone in the Town of Mount Morris increased slightly from 38 to 55. While this may be a satisfactory living situation for some, for others it may be a challenge. As costs rise and health declines, elderly singles may have difficulty maintaining their housing unit, especially if they own a larger home. Homes may need special modifications or additional equipment if the elderly or disabled are to live

[6] U.S. Census; 1970, 1980, 1990, 2000.
[7] U.S. Census; 1990, 2000.

independently. Assistance may also be needed with housekeeping, transportation or meal preparation, etc. Social isolation may also become an issue if these individuals have limited mobility options.

**Figure 1-2. Percent of Households by Type, 2000**



*Source: U.S. Census; 1990, 2000, STF IA.*

## Race

Population by race provides information regarding the social and cultural characteristics of an area. It also provides information regarding population dynamics. Access to education and economic opportunities differ by race. Differences also exist in age structure, language barriers and risks for various diseases and health conditions.

Since new immigrants are more likely to settle in areas with existing populations from their countries of origin, race and ethnicity, existing populations may also influence migration patterns. National population trends indicate that persons of color (includes African Americans, Native Americans, Alaskan Natives, Pacific Islanders, Asians and persons declaring two or more races) and persons of Hispanic Origin are growing faster than non-Hispanic whites[8]. As the population of the cluster, Waushara County, and Wisconsin continue to grow, it is likely that the minority proportion of the population (persons of color and whites of Hispanic Origin) will also continue to grow. If this occurs, communities may need to compensate for the changing demographic composition. It is important that these individuals participate in the planning process so that these individuals not only understand local cultural norms, but also have a positive stake in local communities. Communities may also find it beneficial to promote

[8] U.S. Census.

opportunities for positive interaction between cultures. An increase in understanding of differences and similarities in expectations and cultural values may help reduce friction between groups.

### Racial Distribution[9]

The Town of Mount Morris experienced a slight increase in minority population between 1990 and 2000 (Appendix A, Tables A-10 and A-11). However, the number of persons of nonwhite race remained small. Only 19 individuals in the Town of Mount Morris identified themselves as nonwhite in 2000. Whites continued to comprise an overwhelming majority of the population. Persons of "two or more races" comprised the largest nonwhite group in Mount Morris. The 2000 Census was the first Census which allowed persons of mixed race to identify themselves as belonging to this selection. Less than two percent of state and Town of Mount Morris residents and less than one percent of Waushara County residents declared they were of two or more races.

The population in the Town and county are less diverse than that of the state. ***In 2000, whites comprised 98.2 percent of the Town of Mount Morris population compared to 88.9 percent of the state's population and 96.8 percent of the county's.***

Although Hispanics are the fastest growing ethnic group in the United States, they currently comprise less than four percent of the county's and state's population (Appendix A, Table A-12). However, like the nation, this segment of the population is one of the fastest growing in the area. Between 1990 and 2000, the Hispanic population within Waushara County and Wisconsin just about doubled. At the county level, the Hispanic population increased from 2.0 percent of the county's population to 3.7 percent. At the state level, the Hispanic population increased from 1.9 percent of the state's population in 1990 to 3.6 percent of the state's population in 2000.

Although the number and share of Hispanics increased in the Town of Mount Morris between 1990 and 2000, they remain a very small part of the population. In 2000, Hispanics comprised 0.9 percent of the Town of Mount Morris population compared to 0.1 percent in 1990. If the Town is going to continue to grow through migration, it is likely that the number and percentage of Hispanics in the area will also increase as Hispanics are becoming a larger share of the national, state and county population.

### Income Levels

Income includes both earned and unearned income. Earned income includes money earned through wages, salaries and net self-employment income (including farm income). Unearned income includes money from interest, dividends, rent, social security, retirement income, and disability income and welfare payments[10]. Traditionally, earned income is geographically dependent, as the quality of local jobs determines the earning potential and quality of life for local residents dependent on earned income. Unearned income is not geographically dependent. Retirement pensions, for example, may come from a company which is located several states away. As a result, a retiree's quality of life is not as dependent on the health of the local economy and quality of jobs in the area as someone who derives the majority of their income from earnings. As telecommuting increases and becomes more mainstream, earned income

[9] U.S. Census; 1990, 2000, STF IA.
[10] U.S. Census Bureau.

may become more geographically independent. However, at this point in time, little telecommuting occurs in Waushara County.

### *Impact of Earnings on Household Income*[11]

An examination of 1999 income data indicates that the majority of household income within the Town of Mount Morris, Waushara County and the state is derived from earnings. As a result, ***access to earning opportunities is a strong determinant in meeting the income needs of residents in all three jurisdictions*** (Appendix A, Table A-13). Sixty-six percent (66.4%) of income in Mount Morris was derived from earnings, while the state reported 80.6 percent of earned income. At the county level, only 71.4 percent of income was derived from earnings, which indicates that the Town as a whole is slightly less dependent on employment and job creation than the county or the state.

In all three jurisdictions, the average income per household was higher than the average earnings per household, which indicates that all three jurisdictions also benefit from unearned income (Appendix A, Table A-13). In the three jurisdictions, the percent of households with earnings ranged from 76.5 percent in the Town of Mount Morris to 75.7 percent in Waushara County and 81.8 percent for the state.

### *Income Comparisons*[12]

Three commonly used income measures are median household income, median family income and per capita income. Median income is derived by examining the entire income distribution and calculating the point where one-half of incomes fall below that point, the median, and one-half above that point. Per capita income measures income per person, and is calculated by dividing the total income of a particular group by the total population of that particular group, including all men, women and children, regardless of age and earning potential.

A comparison of median family, median household and per capita income values between 1989 and 1999 indicate the Town of Mount Morris, Waushara County, and Wisconsin experienced an increase in all income measures during this time period (Appendix A, Table A-14). The Town of Mount Morris experienced the largest increase in all three measures in all three jurisdictions, while the state had the smallest increases in all measures. The income gap between the state and the Town of Mount Morris appears to be narrowing. Furthermore, in 1999, the Town of Mount Morris surpassed the county income measures and therefore had a higher median family, household and per capita income.

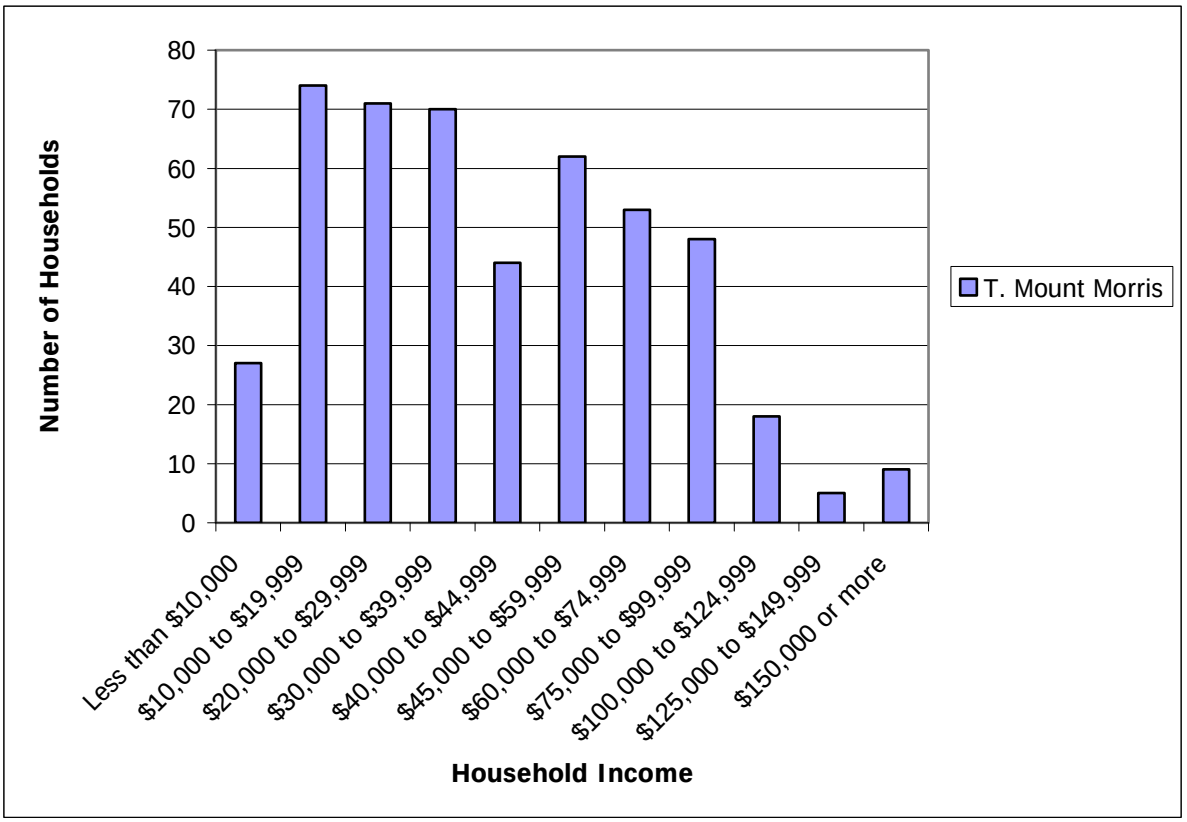
In spite of these gains, ***the State of Wisconsin maintained higher median household, family and per capita incomes than Waushara County and the Town of Mount Morris for year 1999.***

[11] U.S. Census, 2000, STF 3A.
[12] U.S. Census, 2000

### *Household Income by Range*[13]

Median and per capita income figures are often used to compare incomes across communities. Household income by range, however, provides a clearer picture of the distribution of income within a community. This allows communities to target policies, programs, housing and economic development opportunities to better meet the needs of their residents. Table A-15 in Appendix A identifies the number of households in income categories ranging from those with incomes of less than $10,000 through those with incomes of $150,000 or more. Figure 1-3 shows the distribution of those households. 2000 Census information indicates that in 1999 the Town of Mount Morris had 27 households with incomes below $10,000. The income range with the largest number and share of households was between $10,000 to $19,999 with 74 households or 15.4 percent. There were nine households with incomes of $150,000 or more.

**Figure 1-3. Distribution of Households by Income Range, 1999**



*Source: U.S. Census, 2000*

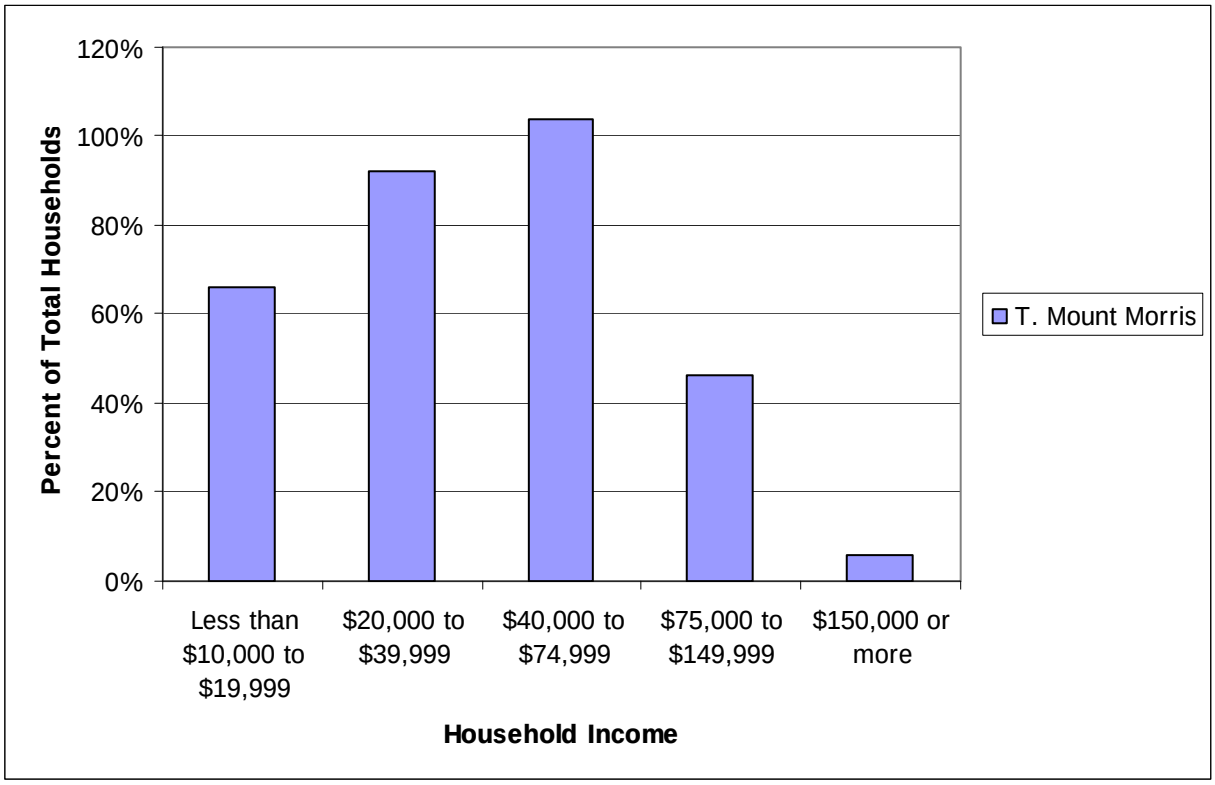
For additional comparison and analysis, the eleven income categories in Appendix A, Table A-15 have been consolidated into five broader income categories and presented in Figure 1-4 as a share of total households with income. ***Over eighty-three percent (83.4%) of households in the Town of Mount Morris reported incomes below $75,000 in 1999.*** Approximately 50 percent of Town of Mount Morris households reported income at or below the county median income ($37,000), which means that many households in the area are likely eligible for programs such as housing rehabilitation grants and loans, guaranteed loans for first

[13] U.S. Census, 2000

time home buyers and job training programs designed to help increase skills which should result in increased earnings potential. Some families may also be eligible for school lunch programs.

The percentage of households with incomes below $20,000 comprised 21.0 percent of all households in the Town of Mount Morris. In comparison, 23.1 percent of county households and 19.1 percent of Wisconsin households had incomes less than $20,000. At the other end of the spectrum, 11.7 percent of county households and 20.3 percent of Wisconsin households had incomes of $75,000 or more, while the percentage of households with incomes of $75,000 or more was 16.6 percent for the Town of Mount Morris.

**Figure 1-4. Household Income by Range, 1999**



*Source: U.S. Census, 2000, STF 3A*

### *Poverty Status*[14]

The poverty level is determined by the U.S. Census Bureau and based on current cost of living estimates, as adjusted for household size. In 1990, the poverty threshold for a family of four with two children was a household income of $12,674. By 2000, the poverty threshold for a family of four with two children had risen to $17,463.

***Between 1989 and 1999, both the number and percentage of persons living below the poverty threshold declined in all three jurisdictions*** (Appendix A, Tables A-16 and A-18). ***Seven percent (7.3%) of Town of Mount Morris residents still lived below the poverty line in 1999, compared to 12.4 percent in 1989.*** Nine percent (9.0%) of Waushara County residents and 8.4 percent of Wisconsin residents continued to live in poverty

[14] U.S. Census, 1990; U.S. Census, 2000, STF 3A

as well (Appendix A, Table A-18), which indicates that poverty is less common in the Town than at the county or state level.

Poverty by age trends varied. Children were more likely to live below poverty than elderly residents during both time periods in Waushara County and Wisconsin. Not only were children more likely to live below poverty, they comprised a greater number and share of total persons in poverty than elderly residents. For example, at the county level, 584 children lived in poverty in 1999 compared to 462 persons 65 and older. The ratio of children to elderly below poverty was even greater at the state level, where 150,166 children lived below poverty compared to 49,245 persons age 65 and older (Appendix A, Table A-19).

***In 1989, 21.8 percent of children in the Town of Mount Morris lived in poverty, compared to 3.9 percent of the elderly. By 1999, the share of children living in poverty in the Town of Mount Morris had decreased to 10.0 percent, while the share of elderly living in poverty had remained relatively constant (4.0%)*** (Appendix A, Table A-17 and A-19).

Of the three jurisdictions, Mount Morris had the highest share of children in poverty in 1989, 20.3 percent, while the state had the lowest, 14.9 percent. Between 1989 and 1999, the Town of Mount experienced a sharper decline in the share of children in poverty than the county and state as a whole. As a result, in 1999 the state had the largest share of children in poverty (11.2%), while the Town of Mount Morris had the least (10%). In Waushara County, 10.9 percent of children still lived in poverty in 1999.

In 1989, the Town of Mount Morris had 3.9 percent of elderly residents living in poverty. Nine percent (9.1%) of state residents and 13.9 percent of Waushara County residents lived in poverty in 1989. By 1999, the share of elderly residents living in poverty had decreased to 7.4 percent in the state and 10.8 percent in Waushara County, while the share of elderly residents in the Town of Mount Morris had remained relatively constant at 4.0 percent( Appendix A, Table A-17 and A-19).

Between 1989 and 1999, the number of families in poverty declined in all three jurisdictions. Since the total number of families also increased during this same time period, the share of families living in poverty declined. In 1989, the share of families living in poverty ranged from 10.1 percent in Waushara County to 7.6 percent in Wisconsin. Nine percent of families in the Town of Mount Morris lived below the poverty level. In 1999, there were 5.8 percent of families living in poverty in the Town of Mount Morris (Appendix A, Table A-16 and Table A-18).

Most discussions regarding poverty tend to focus on children and elderly, as they are considered dependent populations which have little to no ability to change their circumstances. As a result, they are the populations most in need of assistance. However, as the U.S. economy moves from a manufacturing based economy to a service based economy, many individuals find themselves falling into a category called the working poor. These are individuals who are working, but their wages are too low to move them out of poverty.

## Population Forecasts[15]

Population projections can provide extremely valuable information for community planning; but by nature, projections have limitations which must be recognized. First, population projections are not predictions. Population projections are typically based on historical growth patterns and the composition of the current population base. Their reliability depends to a large extent on the continuation of those past growth trends. Second, population projections for small communities are especially difficult and subject to more error, as even minor changes in birth, death or migration rates can significantly impact community growth rates. Third, population growth is also difficult to predict in areas which are heavily dependent on migration, as migration rates may vary considerably based on various "push" and "pull" factors both within and outside of the area.

Since migration has played such an important role in Waushara County population growth, migration rates are expected to significantly impact future population growth. An examination of past growth trends in the Town of Mount Morris indicate that decades of growth occurred during periods of high net in-migration and periods of population decline occurred during periods of low net in-migration. These historic population fluctuations are carried forward in the population forecasts for the Town (Table 2-1 and 2-2, Appendix A Table A-20).

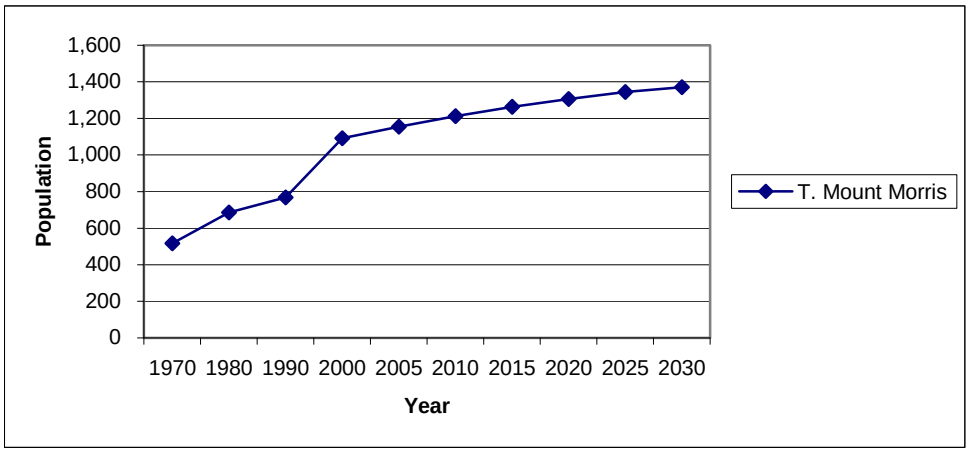
Population growth in the Town will result in an increase in demand for services and land consumption. The density of settlement, coupled with the amount and location of land consumed for housing, commercial and industrial uses will impact service costs. Additional development will decrease the amount of open space. Development choices will also impact the economic vitality of the agricultural and forestry sectors.

Table A-20, Appendix A presents population estimates for Waushara County through 2030. These population projections are based on a combination of average growth trends over the last four decades, anticipated growth patterns developed by DOA, and anticipated impacts from the new Redgranite Correctional Facility. It is assumed that the largest population gains will occur during the first decade and will taper off during the second decade. However, as noted earlier, growth rates can shift quickly in smaller communities and migration can vary substantially based on factors within and outside of communities. As a result, it is recommended that the Town of Mount Morris review their population growth every five years to determine if their population change is following anticipated trends or if growth trends are shifting.

***The Town of Mount Morris is expected to increase its population by 25.5 percent between 2000 and 2030 or from 1,092 to 1,370 (Figure 1-5).*** This change is similar to Waushara County which is expected to grow by 21.6 percent during this same time frame.

[15] Source: U.S. Census, 1970, 1980, 1990, 2000; WI DOA, 2004; ECWRPC

**Figure 1-5. Population Estimates, 1970 to 2030**



*Source: U.S. Census, 1970, 1980, 1990, 2000; WDOA, 2004; ECWRPC*
Note: Population estimates include anticipated impact of the Redgranite prison. Includes correction to 2000 Census.

### *Population Projections by Age Cohort*

Reliable age cohort projections at the community level are not available for the Town of Mount Morris. Past trends and anticipated national, state and county trends indicate that population growth has not occurred uniformly in all age groups due to fluctuations in fertility rates and differences in migration patterns by age. These variations in growth rates, coupled with the aging of the baby boom population, will impact the population and age distribution within the Town of Mount Morris.

Wisconsin migration patterns by age indicate that as individuals approach retirement age, many relocate to rural communities. As elderly persons in rural areas age and their health begins to deteriorate, many relocate to urban communities for access to better services and healthcare. However, increases in technology and healthcare have contributed to longer life spans and allowed the elderly to remain more independent. It is unclear at this point how these changes will impact future migration patterns by age. ***Waushara County population projections by age cohort[16] indicate that the number of county residents age 65 and older may almost double between 2000 and 2030, while the number of children may decline by 21 percent.*** In the future, the Town of Mount Morris may find themselves balancing the needs of school age children with the needs of their elderly residents.

### Household Forecasts

In previous household forecasts, East Central relied on county and minor civil division (MCD) persons per household (pphh) projections from DOA to adjust future household growth to reflect modifications to population forecasts. During this update, MCD level pphh information was not formally released. As a result, staff found it necessary to develop an alternative methodology for forecasting households at the MCD level. After reviewing a number of potential methodologies, staff selected the two methodologies which provide the best fit for the largest number of communities within the region.

[16] WI DOA, 2004

While both household forecasts are available for communities and counties to use for planning purposes, ECWRPC uses the methodology which generates the largest number of projected year round households for sewer service area and long range transportation/land use planning purposes. In instances where neither methodology consistently generates the highest number of households for communities within those sewer service and long range transportation plan study areas, a combination of both methodologies is used. This allows communities to develop the infrastructure to handle the largest anticipated amount of growth. Communities which experience seasonal fluctuations in populations will need to make adjustments to these numbers in the appropriate sections of this planning document.

The actual growth rate and amount of future growth communities experience will be determined by local policies which can affect the rate of growth within the context of county, state and national population growth trends. Since migration plays such a large role in Waushara County growth patterns, growth rates and trends outside of the county will influence the pool of potential residents the county can attract. If communities prefer a slower growth option which puts less pressure on their natural resources and lessens the impact on their community character, communities are welcome to use the lower estimates. Regardless of whether communities prefer a no growth, low growth or high growth option, it is recommended they adequately prepare for future growth/changes to provide the most cost-effective services possible. Furthermore, individual communities can maximize the net benefits of public infrastructure and services by encouraging denser, efficient growth patterns which maximize the use of land resources while minimizing the impact on the natural resource base.

***Based on projected growth patterns and smallest average household size assumptions, the number of households in Waushara County is expected to increase by 28.9 percent between 2000 and 2030***[17]. ***It is anticipated that the number of households will increase by 38.5 percent in the Town of Mount Morris or from 481 to 666*** (Appendix A, Table A-22).

**Table 1-3. Estimated Households, 2000 to 2030**

| Town of Mt. Morris | 2000 | 2005 | 2010 | 2015 | 2020 | 2025 | 2030 |
|---|---|---|---|---|---|---|---|
| No. Households | 481 | 500 | 543 | 583 | 616 | 645 | 666 |
| Persons per HH | 2.27 | 2.31 | 2.23 | 2.17 | 2.12 | 2.09 | 2.06 |

*Source: U.S. Census, 2000; ECWRPC.*

The increase in the number of households is expected to result from in-migration of new households and a continued decrease in household size. Since new households are formed within an existing population when households split into two or more households, the number of households can increase even if the population does not. One major factor contributing to an increase in households nationwide will be the aging of the echo-boom generation. As these children of the baby-boomers move out of their parent's home and form their own household, the increase in the number of new households is expected to be large compared to actual population growth. Increases in population may also be the result of people choosing the Town of Mount Morris as their retirement destination.

[17] U.S. Census, 2000; ECWRPC

## Key Findings

### *Demographic Trends*

- Over the past fifty years, the population of the Town of Mount Morris has increased.
- The population decreased slightly from 1950 (451) to 1960 (422), then increased to a year 2000 population of 1,092.
- Migration has played a greater role in population change in Waushara County than natural increase between 1950 and 2005.
- Since natural increase rates were negative, the entire increase in population in Waushara County since 1990 can be attributed to in-migration.
- Population density in the Town of Mount Morris was less than the county average, with an average of 32 persons per square mile.

### *Household Structure*

- Household size for the Town of Mount Morris and Waushara County has been decreasing since 1970.
- The Town of Mount Morris had an average household size of 2.4 in 1990, and then dropped slightly to 2.3 in 2000.
- In 1990 and 2000, the majority of households for the Town of Mount Morris were family households, and the majority of family households were married couple families.
- In 2000, whites comprised 98.2 percent of the Town of Mount Morris population compared to 88.9 percent of the state's population and 96.8 percent of the county's.

### *Income Levels*

- Access to earning opportunities is a strong determinant in meeting the income needs of residents in the Town of Mount Morris, Waushara County and Wisconsin.
- The State of Wisconsin maintained higher median family, median household and per capita incomes than Waushara County and the Town of Mount Morris for year 1999.
- Over eighty-three percent (83.4%) of households in the Town of Mount Morris reported incomes below $75,000 in 1999.
- Between 1989 and 1999, both the number and percentage of persons living below the poverty threshold declined in the Town of Mount Morris, Waushara County, and the State. Seven percent (7.3%) of Town of Mount Morris residents still lived below the poverty line in 1999, compared to 12.4 percent in 1989.
- In 1989, 21.8 percent of children in the Town of Mount Morris lived in poverty, compared to 3.9 percent of the elderly. By 1999, the share of children living in poverty in the Town of Mount Morris had decreased to 10.0 percent, while the share of elderly living in poverty had remained relatively constant (4.0%).

### *Population Forecasts*

- The Town of Mount Morris is expected to increase its population by 25.5 percent between 2000 and 2030 or from 1,092 to 1,370.

- Waushara County population projections by age cohort indicate that the number of county residents age 65 and older may almost double between 2000 and 2030, while the number of children may decline by 21 percent.

### *Household Forecasts*

- Based on projected growth patterns and smallest average household size assumptions, the number of households in Waushara County is expected to increase by 28.9 percent between 2000 and 2030.
- It is anticipated that the number of households will increase by 38.5 percent in the Town of Mount Morris or from 481 to 666.

## INTERRELATIONSHIPS WITH OTHER COMPREHENSIVE PLAN ELEMENTS

### Economic Development

An aging population creates opportunities and challenges. If current migration trends hold true, the Town of Mount Morris will likely continue to attract baby-boomers. Many of these individuals may have personal wealth and/or good retirement incomes. At the same time, the Town will likely continue to have persons age 65 and older living in poverty.

A larger population will likely drive the need for additional goods and services. Local companies and communities may need to find creative ways to attract younger working individuals (25 to 45 years old) to live and work in the planning area to meet workforce needs. At the same time, recruiters should allow elderly who seek employment to continue to remain in the work force.
As people are living longer, many are choosing to work into their traditional retirement years. These individuals often desire more flexibility or part-time employment. Other older individuals may need to earn extra income to afford the basic necessities and/or cover healthcare costs. Some retirees may not be interested in continuing in the workforce, but have the skills, knowledge and desire to serve as mentors and teachers. These individuals may, upon request, desire to volunteer to help communities address housing, literacy, financial education or other local needs. Some may wish to provide expertise to emerging businesses through a SCORE chapter. Since growing local businesses can be as important as attracting outside firms to locate in the area, new entrepreneurs should be encouraged to develop new industries so that job opportunities are available to all residents. Data indicates that earnings are an important component of household income in the Town. As a result, communities in the area should work together to build and attract living wage employment opportunities.

### Housing

Additional housing will be needed to meet the anticipated increase in the number of households, the needs of seasonal residents and changing demographic trends within communities. The type, tenure and quantity of housing needed will vary based on the age structure, physical needs, income levels and preferred housing choices of the overall population. In all likelihood, communities will need a mixture of housing types, styles and price ranges. If current income structures remain in place, quality housing for low income workers and elderly will be important. New single family as well as multi-family homes will be needed. Some

conversion of seasonal to year-round residences is anticipated. Existing homes may need to be remodeled or rehabilitated to meet changing needs. Communities will likely need housing for singles, young families and their workforce. A variety of housing will be needed for the elderly and disabled as well. Remodeling or rehabilitation may help elderly or disabled individuals who wish to stay in their existing home to remain in their homes for a longer period. Other individuals may desire other alternatives or need assisted living or skilled nursing facilities. Condominiums, efficiency apartments or community based residential facilities may be best suited for this segment of the population. The Town may need to determine if they wish to provide these alternatives or if these individuals should be served elsewhere. Furthermore, housing costs appear to be rising faster than incomes in the Town of Mount Morris.

### Transportation

As communities grow, roads and other infrastructure may be needed to access additional housing, commercial, public and industrial buildings that may be constructed to accommodate the increasing population base. Transportation systems should be monitored for adequacy in meeting increased demands for local and through traffic. Potential changes could include additional lanes or other upgrades to existing roads. Local governments should also consider alternative transportation needs and desires. Increased access to bicycle and pedestrian facilities could provide viable, cost-effective transportation options for residents and increase recreational opportunities. As the elderly population's ability to drive decreases, the need for specialized transportation will increase. If these individuals are to remain in the area, increased access to affordable bus, shared ride taxi service or other transportation alternatives will be necessary to ensure that the elderly can visit healthcare professionals, shop for groceries, and meet other basic needs.

### Utilities and Community Facilities

As population demographics change, the overall needs of the community also change. A growing elderly population, for example, may increase the need for additional healthcare or adult daycare facilities. School facilities may need to be upgraded or modified to meet changing educational expectations or to help increase the earnings potential of local residents. An increase in residences may increase the need for police or fire protection. In the future, the Town will likely need to increase the number and availability of services targeted towards the elderly while maintaining a balance with services for working age persons and school age children. Communities will also need to balance the demands and needs of year-round and seasonal populations with the costs of those facilities and services. Ideally, improvements and expansions of utilities and community facilities and services should be coordinated with fluctuations in population. While some national recommendations are provided to help communities determine appropriate levels of service for fire, libraries, schools, open space, recreation and other public services, local governments should tailor services to local conditions to ensure that the basic needs of their citizens are meet.

### Agricultural Resources

Traditionally many of the farms within the County are small family owned operations. Throughout Wisconsin the numbers of agricultural operations, especially dairy farms, are declining significantly as existing farmers reach retirement age. Currently, few younger

individuals are entering the farming profession due to increased operational costs and more stringent regulations. As the population in Waushara County increases, more pressure will be placed on landowners to convert land from farmland to residential, commercial and industrial development, which will further exacerbate these trends. Since agriculture is important to the economy of the Town of Mount Morris, they should consider ways to reverse the decline in agriculture. Increased reliance on locally produced agricultural products would support the local agriculture and food products sectors and help ensure their continued operation, affordability and access. Alternative farming methods, programs and land use regulations could help meet anticipated increase in food demands.

### Natural Resources

The critical question with respect to natural resources is how an expanding population base will affect the protection and preservation of natural resources. The increased demand for housing, commercial and industrial development will consume additional land throughout Waushara County. The abundance of natural resources, including wetlands, lakes, streams and forests sustains a portion of local economy. As development occurs, issues regarding open and natural space preservation/enhancement, water quality protection, wildlife habitat management, floodplain management and others will need to be addressed. Increased road construction will also require gravel, sand, and other non-metallic minerals. Deposits throughout the planning area will need to be identified so that transportation and construction costs can be minimized.

### Cultural Resources

Waushara County is rich in historical, archeological, and cultural sites. These sites provide information about early Native Americans, European settlement and the development of the area. Many buildings and areas have significant religious or cultural meaning. Efforts should be made to inventory and map historical, archeological, and cultural sites so that their significance is not destroyed or altered. These sites provide a link with the county's cultural and ethnic heritage. Preserving them would help document the changing demographics and socio-economic characteristics of the area. Historical sites, heritage corridors and museums may also provide economic development opportunities. Moreover, a concerted effort should be made to incorporate historical architectural styles into modern construction to enhance local cultural features and preserve community character.

The latest Census data indicates that the population of Waushara County and Wisconsin is becoming more diverse. As the area's population changes, language barriers and a lack of awareness and understanding between races, cultures, classes and generations can lead to conflict. Positive opportunities for cross-cultural, cross-class and multi-generational interaction can help resolve any issues that may arise as the area's population changes.

### Land Use

Additional land will be converted to residential, commercial/industrial and public/institutional uses to accommodate anticipated population and household changes. These changes could alter the pattern of existing development and community character and place additional pressure on natural, cultural and agricultural resources. By recognizing the relationship between the density of settlement and amount and location of land consumed, local

governments could minimize conflicts and protect natural and agricultural resources, amenities and community character. Two basic options for locating new development are within areas of existing infrastructure and development or converting farm, forest or open space lands to other uses. Either option will impact local communities. The Town of Mount Morris will need to make choices that help achieve the envisioned future.

### Intergovernmental Cooperation

Although larger populations will result in an increased tax base, the offsetting costs for infrastructure, maintenance and services will require local governments and organizations to identify ways to provide cost-effective services to their residents. Where feasible, local governments must cooperate not only to provide adequate infrastructure to meet increased demands, but also to encourage economic development and employ sufficient staff to handle the anticipated service usage increases. Furthermore, a well-informed staff is necessary for local governments to meet the growing needs of the general public. Through effective communication, training and education, local governments will avoid unnecessary duplication of services and provide more streamlined access to information and services.

## POLICIES AND PROGRAMS

Growth and development patterns do not occur in a vacuum. Over time, federal, state and local policies have directed the amount and location of development. Federal immigration policies determine the flow of immigrants into the United States, both in terms of numbers and countries of origin. Concepts such as Manifest Destiny combined with expansive federal housing, land and transportation legislation, policies and subsidies such as the Homestead and Railroad Acts, the interstate highway system and IRS codes, etc. have heavily influenced settlement patterns. Additional federal legislation such as the Civil Rights Act, Americans with Disabilities Act (ADA) and Affirmative Action legislation have increased access and opportunities for persons of color and persons with disabilities. Wisconsin has broadened federal Civil Rights and Affirmative Action laws to include additional protected classes. State transportation policies and state land use legislation such as NR121, farmland preservation, natural resource protection and real estate tax codes have influenced growth and settlement. Local attitudes towards growth and accompanying zoning legislation, transportation and utility investments and tax and land subsidies also influence the type and amount of growth and development which occurs in each community.

Policies which impact growth and development have been developed over time by different agencies and different levels of government with varying missions and objectives. The resulting policies and programs are sometimes complementary and sometimes contradictory. It is the interaction of these various policies and market influences that determine actual growth patterns. Although many current federal and state policies and subsidies still encourage expansion, other policies such as the 14 land use goals recently developed by the state also encourage communities to accommodate growth in perhaps a more efficient manner than they have in the past. The recently adopted comprehensive plan legislation encourages communities to develop comprehensive plans, but provides communities with the opportunity to determine their own growth patterns. As a result, the type of development which will occur in the future is still open to debate.

## Regional, County and Local Policies

**East Central Wisconsin Regional Planning Commission.** East Central Wisconsin Regional Planning Commission has developed a regional smart growth plan. As part of the planning process, East Central has identified several key issues:

- How do we plan for continued population growth, which will result in an increase in demand for services and land consumption in the region?

- How do we promote the recognition of the relationship between the density of settlement and amount and location of land consumed for housing, commercial, and industrial uses and the costs of services?

- How do we ensure the economic vitality of the agricultural and forestry sectors in the context of a decrease in the amount of open space?

- How do we address the conflicts that will arise given that the majority of future growth is expected to occur in the urban counties, which is where most of the region's more productive farmland is located? More specifically, how will we address the impact on the farm economy?

- How do we ensure that an increase in urbanization has a positive impact on rural communities?

- Urban counties in the region currently have greater social and economic capital, more government support due to a larger tax base, and greater access to nonprofit services than rural counties. Current trends show the educational and income gap between urban counties and rural counties widening. How do we plan to decrease this gap and promote a healthy, vibrant economy and quality of life for all residents throughout the region?

The core goal for the Issues and Opportunities Section is:

- To promote communities that are better places in which to live. That is, communities that are economically prosperous, have homes at an affordable price, respect the countryside, enjoy well designed and accessible living and working environments, and maintain a distinct sense of place and community.

The intent of this goal is to minimize the negative effects of sprawl development and provide a cost-effective variety of services and infrastructure that will meet the changing demographics of the overall population.

## Federal, State and Regional Programs

This section includes information on federal, state and regional programs which were used to develop this chapter. Other programs which influence growth and may impact future socio-economic conditions will be described in pertinent chapters within this plan.

### *Federal Agencies*

#### United States Department of Commerce

**Economics and Statistics Administration (ESA).** The Economics and Statistics Administration collects, disseminates and analyzes broad and targeted socio-economic data. It also develops domestic and international economic policy. One of the primary bureaus within the ESA is the U.S. Census Bureau. The majority of information analyzed in this chapter was collected and disseminated by the Census Bureau, which is the foremost data source for economic statistics and demographic information on the population of the United States. The Census Bureau conducts periodic surveys and Decennial Censuses that are used by federal, state, and local officials and by private stakeholders to make important policy decisions. The Bureau produces a variety of publications and special reports regarding the current and changing socio-economic conditions within the United States. It develops national, state and county level projections and also provides official measures of electronic commerce (e-commerce) and evaluates how this technology will affect future economic activity.

### *State Agencies*

#### Wisconsin Department of Administration (DOA)

**Demographic Services Center.** The Wisconsin Department of Administration (DOA) Demographic Services Center is responsible for developing annual population estimates for all counties and all minor civil divisions (MCD) in the state. They develop annual estimates of the voting age population by MCD and population estimates by zip code. The Demographic Services Center also produces annual county level housing unit and household estimates. The Demographic Services Center also develops population projections by age and sex for all Wisconsin counties, and produces population projections of total population for all municipalities.

**Wisconsin State Data Center (WSDC).** The Wisconsin State Data Center is a cooperative venture between the U.S. Bureau of the Census, DOA, the Applied Population Laboratory at the University of Wisconsin-Madison and 39 data center affiliates throughout the state. The U.S. Bureau of the Census provides Census publications, tapes, maps and other materials to the WSDC. In exchange, organizations within WSDC function as information and training resources. DOA is the lead data center and the Applied Population Laboratory functions as the coordinating agency throughout the state. Local data center affiliates, such as East Central, work more closely with communities and individuals within their region.

#### University of Wisconsin-Madison

**Applied Population Laboratory (APL).** The Applied Population Laboratory is located with the Department of Rural Sociology at the University of Wisconsin-Madison. They conduct socio-economic research, give presentations and publish reports and chartbooks. They will contract to do specific studies or school district projections. APL also functions as the coordinating agency for the WSDC and the lead agency for the Wisconsin Business/Industry Data Center (BIDC).

### *Regional Programs*

**East Central Wisconsin Regional Planning Commission.** As the state data center affiliate for the region, East Central receives Census materials and Demographic Service Center publications from DOA, plus additional information and reports from other state agencies. This information is maintained within its library, used for planning purposes and published within East Central reports. Information and technical assistance regarding this data is also provided to local governments, agencies, businesses and the public upon request.

While DOA provides base level population projections for the state, local conditions, such as zoning regulations, land-locked communities, and local decisions regarding land use development can influence the accuracy of these base line projections. As a result, East Central has the authority to produce official population projections for the region. East Central also estimates future household growth.

# CHAPTER 2: HOUSING

## INTRODUCTION

A number of factors influence how well the housing stock meets the needs of the community. The design, placement and density of housing impacts the overall appearance and character of a community by defining a sense of place and encouraging or discouraging social interaction between residents. It influences the cost of housing and the cost and efficiency of other plan elements, such as roadways, school transportation and the provision of public utilities.

The quality and affordability of housing influences the economic health and well-being of the community. Well designed, decent, safe and affordable housing creates a sense of connection and ownership between residents and their neighborhood and community. Residents with decent, safe affordable housing have more resources available for food, clothing, transportation, health care, savings for college or retirement, and other expenses. They also have the resources necessary to maintain their housing, which contributes to the quality of the community's housing stock and appearance of the community.

## INVENTORY AND ANALYSIS[1]

This section of the chapter provides a broad brush of housing characteristics for the Town of Mount Morris, plus identifies why a particular housing variable may be important. Characteristics which are unique to a particular community are noted, as are characteristics that can help identify strengths or opportunities for improvement. Tables are provided in Appendix B for those who may be interested in more detail.

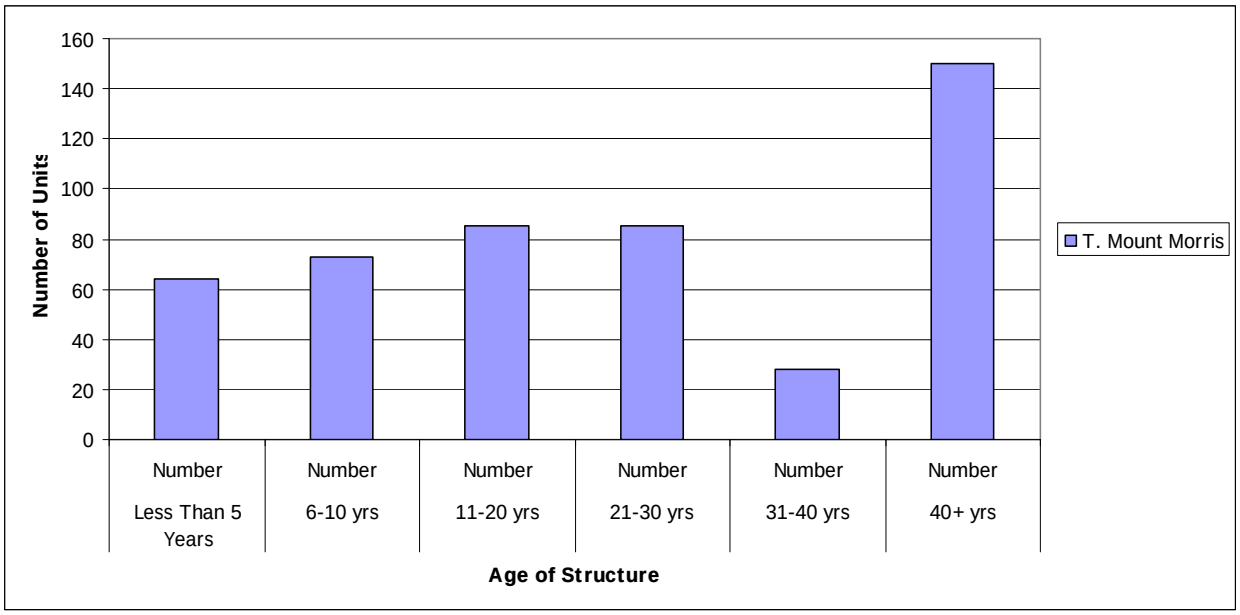
### Age of Occupied Dwelling Units

The age of occupied dwelling units reflect the historic demand for additional or replacement housing units, thereby providing historic information regarding settlement patterns, household formation rates, migration trends and natural disaster impacts. The age of units by itself is not an indication of the quality of the housing stock. However, the age of occupied units can provide limited information regarding building construction and material content, as construction techniques and materials change over time.

***Census information regarding the age of owner-occupied units indicates that the Town of Mount Morris was well established by 1970*** (Appendix B, Tables B-1 and B-2). The number of owner-occupied units rose sharply from 1960 to 1970, and then continued to climb through the 1990's (Figure 2-1 and Figure 2-2).

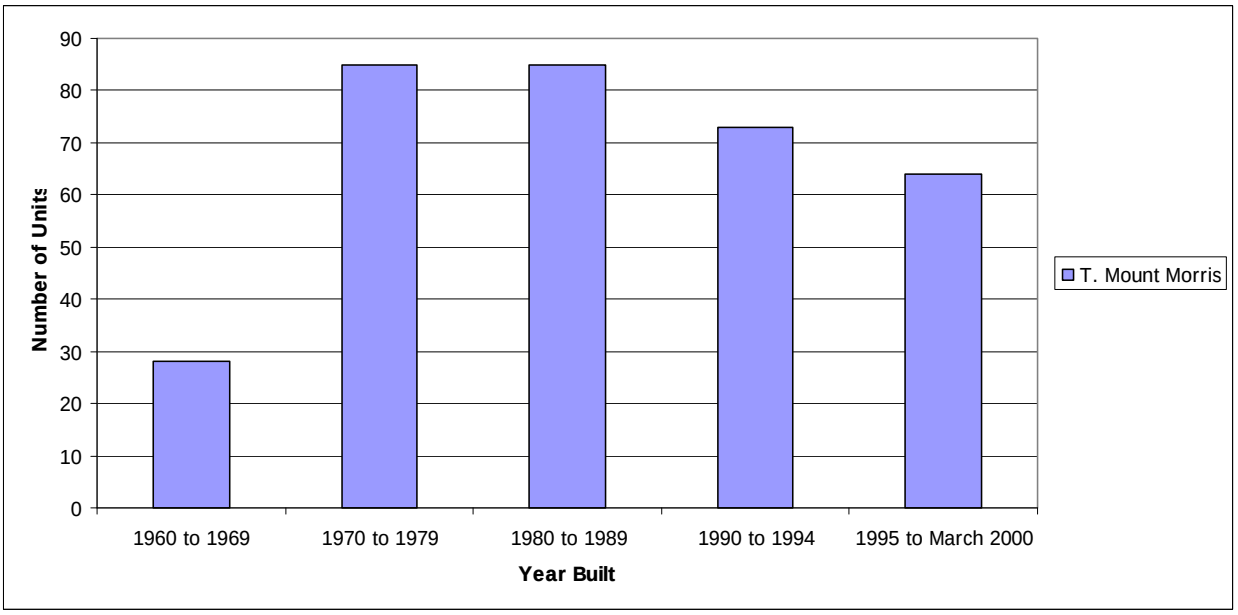
[1] U.S. Census, 1990 and 2000, unless otherwise noted.

**Figure 2-1. Occupied Dwelling Units by Year Built, 1990**



*Source: U.S. Census, 1990.*

**Figure 2-2. Occupied Dwelling Units by Year Built, 2000**



*Source: U.S. Census, 2000.*

The Town of Mount Morris had a slightly smaller percentage of owner-occupied units built prior to 1960 to the state and county. Thirty-one percent (30.9%) of Mount Morris' housing stock was built prior to 1960. At the state and county level, 38.7 percent of Waushara County's housing stock and 44.0 percent of Wisconsin's housing stock was built prior to 1960.

***Between 1990 and 2000, the Town of Mount Morris experienced a greater level of growth in owner-occupied units than was indicated in previous Census periods***

***(1960 to 1990) based on the age of structure information provided in the 1990 and 2000 Censuses.*** The Town of Mount Morris gained 137 new occupied units between 1990 and 2000[2].

## Change in Structural Type

Structural type is one indication of the degree of choice in the housing market. Housing choice by structural type includes the ability to choose to live in a single family home, duplex, multi-unit building or mobile home. Availability of units by type is indicative not only of market demand, but also of zoning laws, developer preferences and access to public services. Current state sponsored local planning goals encourage communities to provide a wide range of choice in housing types, as housing is not a 'one size fits all' commodity.

A single person, for example, will have different housing needs than a couple with children. Housing needs also change as we age, lifestyles change, or in the event that one or more members of the household become disabled. Providing a range of housing choices which meets individual household needs and preferences is one way of encouraging individuals to stay in the community and to draw others to locate there.

***As with most rural communities, the dominant housing type in the Town of Mount Morris is single family housing.*** In 1990, single family housing comprised 86.9 percent of the Town of Mount Morris housing stock. Just over one percent of the Town's housing stock was made up of duplex and multi-family units. In 1990, the Town of Mount Morris was home to 103 mobile homes, trailer & other units which were 11.9% of total housing units (Appendix B, Table B-3).

During the 1990s, conversions, deletions and additions to communities' housing stock resulted in a slightly different composition of housing in 2000. ***By 2000, the share of single family units had increased to 91.3 percent in the Town of Mount Morris, while the number and share of mobile home units decreased to 81 units or 8.1 percent of the total housing units.*** During this same time period, the number and share of two to four units decreased slightly in the Town of Mount Morris (Appendix B, Table B-3).

At the state and county level, the number and share of single family homes and larger multi-family buildings (those with greater than five units per building) increased between 1990 and 2000, while the number and share of two to four unit buildings and mobile home, trailer and other units decreased. In 2000, single family homes comprised 82.6 percent of Waushara County's housing stock and 69.3 percent of the state's housing stock. Mobile home, trailer and other units comprised the second largest housing category for Waushara County; 13.0 percent. Two or more unit housing comprised less than five percent (4.4%) of the County's housing stock. At the state level, the second largest housing category was two or more unit housing, which comprised 26.2 percent of Wisconsin's housing stock. Mobile home, trailer and other units comprised 4.5 percent of the State's housing stock.

[2] U.S. Census 2000.

## Occupancy Status

Occupancy status reflects the utilization of available housing stock. The total number of housing units includes renter-occupied, owner-occupied and various classes of vacant units. Vacant units include those which are available for sale or rent and those which are seasonal, migrant, held for occasional use or other units not regularly occupied on a year-round basis.

For a healthy housing market, communities should have a vacancy rate of 1.5 percent for owner-occupied units and 5 percent for year-round rentals. The number of migrant, seasonal and other vacant units will vary depending on the community's economic base.

### *Tenure*

Occupancy rates vary by community and over time. Total occupancy rates increased for Waushara County, the state and the Town between 1990 and 2000. In both time periods, jurisdictions with the lowest occupancy rates had the highest percentage of seasonal units (Table 2-1). All three jurisdictions experienced a decrease in the number and share of seasonal units between 1990 and 2000 and an increase in the number and share of occupied units and total units. The combination indicates that additional year-round units were built and seasonal units were likely converted to year round residences (Appendix B, Tables B-5 and B-6).

Occupancy rates indicate that Waushara County has a higher percentage of seasonal units than the state as a whole. Both jurisdictions experienced an increase in total occupancy rates and a decrease in the number of seasonal units between 1990 and 2000. Waushara County experienced the largest change.

**Table 2-1. Occupied and Seasonal Units as a Share of Total Housing Units, 1990 and 2000**

| | Total Occupied | | Seasonal | |
|---|---|---|---|---|
| Jurisdiction | 1990 | 2000 | 1990 | 2000 |
| T. Mount Morris | 37.7% | 48.4% | 57.9% | 47.1% |
| Waushara County | 62.2% | 68.3% | 31.7% | 27.0% |
| Wisconsin | 88.6% | 89.8% | 7.3% | 6.1% |

*Source: U.S. Census, 1990 and 2000.*

**Table 2-2. Tenure as a Percent of Occupied Units, 1990 and 2000**

| | Owner Occupied | | Renter Occupied | |
|---|---|---|---|---|
| Jurisdiction | 1990 | 2000 | 1990 | 2000 |
| T. Mount Morris | 88.1% | 89.6% | 11.9% | 10.4% |
| Waushara County | 80.3% | 83.5% | 19.7% | 16.5% |
| Wisconsin | 66.7% | 68.4% | 33.3% | 31.6% |

*Source: U.S. Census, 1990 and 2000.*

***The majority of occupied units within the Town of Mount Morris are owner-occupied. Mount Morris has the lowest owner-occupancy rate compared to Waushara County and the State*** (Table 2-2). Between 1990 and 2000, the share of owner-

occupied units increased in all three jurisdictions. By 2000, the share of occupied units that were owner-occupied ranged from 89.6 percent in the Town of Mount Morris to 68.4 percent in Wisconsin. The share of renter occupied ranged from 10.4 percent in the Town of Mount Morris to 31.6 percent in the state.

## Vacancy Status

Vacant housing units are units that are livable, but not currently occupied. The vacancy status of units available for purchase or rent is considered to be a strong indicator of housing availability. Generally, when vacancy rates are below 1.5 percent for owner-occupied units and 5 percent for renter-occupied units, housing is considered to be in short supply and additional units are needed. If vacancy rates are at or above standard, the community may have an adequate number of units for rent or for sale. However, additional information, such as choice in housing and housing affordability is needed to determine if the units on the market meet the needs of potential buyers or renters. A higher vacancy rate may be appropriate, particularly for smaller communities, if the additional units provide needed choices within the housing market. If the existing vacancy rate is too high for existing market conditions, then property values may stagnate or decline.

### *Owner-Occupied Housing*

Homeowner vacancy rates indicate that the Town of Mount Morris and Waushara County had an adequate share of owner-occupied units for sale in 1990, while the state had a tight housing market. Between 1990 and 2000, homeowner vacancy rates fell in the Town of Mount Morris and Waushara County, but remained stable at the state level (Appendix B, Tables B-7 and B-8). Countywide, the homeowner vacancy rate was 1.9 percent in 2000, which indicates that the county had an adequate number of homes on the market to meet demand. The homeowner vacancy rate for Wisconsin remained stable at 1.2 percent, which was just below the standard for both years. ***In 2000, the Town of Mount Morris had a homeowner vacancy rate of 1.4 percent, which indicates a tight housing market.***

A drop in the vacancy rates is usually related to the increase in the number of owner-occupied units within the Town. Since the vacancy rate is a measure of the number of units for sale compared to the number of owner-occupied units, the number of units for sale is expected to rise as the total number of owner-occupied units rise in order to accommodate the growth in households. However, this did not occur in the Town in the 1990's.

According to the Census, the Town of Mount Morris had seven houses for sale in 1990 and six houses for sale in 2000. The Town of Mount Morris was below the accepted vacancy rate standard of 1.5 percent in 2000.

### *Rental Housing*

In 1990, the rental vacancy rate for the Town of Mount Morris (25.6%) was above the vacancy standard of 5.0 percent, which would seem to indicate that the community had more than an adequate supply of housing units for rent (Appendix B, Tables B-7 and B-8). In comparison, the rental vacancy rates for Wisconsin and Waushara County were 4.7% and 8.5%, respectively.

Between 1990 and 2000, the number of rentals for the Town of Mount Morris and the county decreased, while the state increased. In 2000, the state, county and Town of Mount Morris had vacancy rates above 5.0 percent. ***The rental vacancy rate for the Town of Mount Morris (6.0%) was greater than Wisconsin's (5.6%) and less than Waushara County (6.8%).***

As with the number of homes for sale, the number of housing units for rent in the Town was also small. In 1990, the Town of Mount Morris had ten housing units for rent. In 2000, the number of housing units for rent decreased to three units. With only three units to choose from, the likelihood that a rental unit will meet the needs of a prospective renter is very small.

### *Seasonal Units*

Seasonal units are units intended for use only in certain seasons or for weekend or other occasional use throughout the year. They include properties held for summer or winter sports or recreation such as summer cottages or hunting cabins. They also include time-share units and may include housing for loggers.

Between 1990 and 2000, the number of vacant seasonal units decreased in the Town, the county and state. While the number decreased, the share of vacant units identified as seasonal showed mixed results (Appendix B, Tables B-7 and B-8). ***Between 1990 and 2000, the share of vacant units identified as seasonal decreased from 93.0 percent in the Town of Mount Morris to 91.2 percent***. At the state level, the share of vacant units declined from 64.5 percent of all vacant units to 60.9 percent. The share of vacant units identified as seasonal increased in Waushara County from 83.9 percent in 1990 to 85.3 percent in 2000.

### *Other Vacant*

Other vacant units include: migrant housing; units rented or sold, but not yet occupied; and units held for occupancy by a caretaker or janitor and units held for personal reasons of the owner, but not classified as seasonal. At the state and county level, units held for occupancy by a caretaker or janitor and units held for personal reasons of the owner, but not classified as seasonal comprised the largest segment of the other vacant unit category. At the town level migrant housing does not exist within the Town of Mount Morris.[3] The other vacant units listed were a mix of units rented or sold, but not yet occupied and units held for occupancy by a caretaker or janitor and units held for personal reason of the owner.

According to the Census, other vacant units comprised 3.9 percent of all vacant units for the Town of Mount Morris in 1990 (Appendix B, Tables B-7 and B-8). Between 1990 and 2000, the share of other vacant units increased in the Town. By 2000, other vacant units comprised 7.0 percent of all vacant units in Mount Morris. The Town of Mount Morris reported a total of 21 other vacant units in the Census 1990. Between 1990 and 2000, the number of other vacant units decreased to 36 in Mount Morris.

[3] Status of Migrant Labor Camps, 2008. Wisconsin Department of Workforce Development Migrant, Refuge, and Labor Services.

## Owner-Occupied Housing Stock Value

Owner-occupied housing stock values can provide information about trends in property values, housing demand and choice within the housing market. Housing stock values can also help provide prospective new businesses with information regarding how accessible housing will be for their employees.

### *Median Housing Value Trends: A Broad Historical Perspective*

State and county level information indicate that owner-occupied housing values have risen substantially since 1970. The largest growth in median housing values occurred in the 1970's. Between 1970 and 1980, median housing prices more than doubled in response to inflationary pressures during the late 1970's and increased demand as baby-boomers entered the housing market. Housing prices continued to rise during the 1980's, but at a much slower rate. Housing prices again increased substantially in the 1990's. Lower interest rates and competitive loan products allowed home buyers the opportunity to purchase a higher value home, and the market responded by increasing the average home size for new construction[4]. The number of expected amenities in a home also increased. Communities contributed to the rise in housing prices by increasing minimum lot sizes and minimum square footage. Children of baby-boomers began entering the housing market during this decade, which put additional pressure on the housing market. The increased demand for starter homes and lack of supply drove the value of existing starter homes up substantially. By 2000, the median housing value for Waushara County had risen from $10,600 in 1970 to $85,100; and the median housing value for Wisconsin had risen from $17,300 to $112,200.

### *Current Median Housing Value Trends*

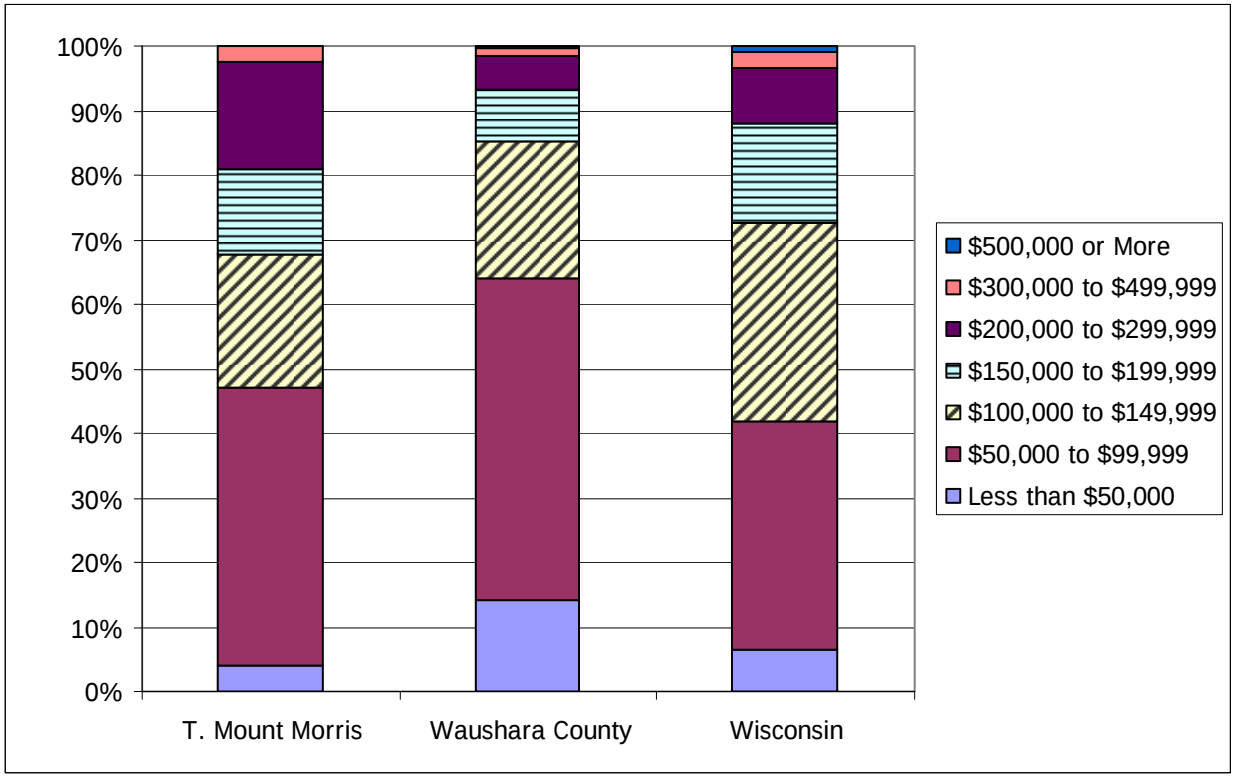
***Between 1990 and 2000, median housing values in the Town of Mount Morris increased by 102 percent. By 2000, the median housing value for the Town of Mount Morris was $108,000, up from $53,500 in 1990*** (Appendix B, Table B-9).

### *Current Values by Price Range*

***Sixty-eight percent of the owner-occupied housing stock in the Town of Mount Morris was valued at less than $150,000 in 2000.*** The largest share of owner-occupied units by price range fell within the $50,000 to $99,999 range (Figure 2-3 and Appendix B, Table B-9). Forty three percent of the Town of Mount Morris' owner-occupied housing stock was valued at $50,000 to $99,999 compared to half of the county's housing stock and a third of the state's owner-occupied housing stock.

[4] In 1970, the average size of a new single family home in the U.S. was 1,500 sq. ft. By 2000, the average size of a new single family home in the U.S. was 2,266 sq.ft.

**Figure 2-3. Housing Values by Range, 2000**



*Source: U.S. Census, 2000.*

## Housing Affordability

The relationship between housing costs and household income is an indicator of housing affordability, which is gauged by the proportion of household income expended for rent or home ownership costs. Rental costs include contract rent, plus the estimated average monthly cost of utilities and fuel. Owner costs include payments for mortgages, real estate taxes, fire hazard and flood insurance on the property, utilities and fuels. In 1989, the U.S. Department of Housing and Urban Development (HUD) raised the standard for determining whether rent or home ownership costs comprised a disproportionate share of income from 25 to 30 percent of gross household income. Households spending more than 30 percent of their income for housing may be at risk of losing their housing should they be confronted with unexpected bills or unemployment of one or more workers per household. Communities should be aware that maintenance and repair costs are excluded from this housing affordability formula, as are other outstanding debts, because these items will have policy impacts. Potential homeowners should be aware that these items are excluded from this housing affordability formula, as these items can impact their housing affordability and future financial stability.

Access to affordable housing is not only a quality of life consideration; it is also an integral part of a comprehensive economic development strategy. Communities need affordable housing for workers in order to retain existing companies and attract new companies to the area. Households which must spend a disproportionate amount of their income on housing will not have the resources to properly maintain their housing, nor will they have adequate disposable income for other living expenses, such as transportation, childcare, healthcare, food, and

clothing. This in turn not only has a negative impact on the overall economy, it may also heighten resistance to property tax increases, which is a major source of revenue for many Wisconsin communities.

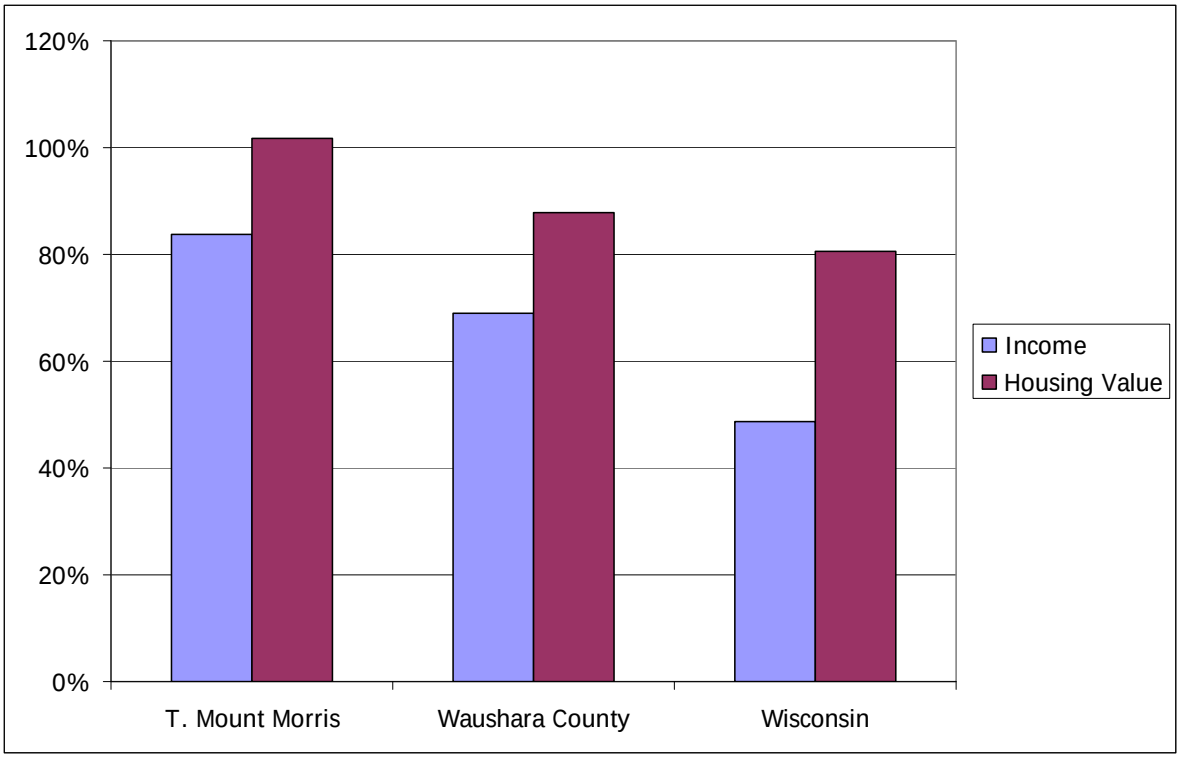
For persons on the bottom end of the economic ladder, affordable housing is particularly important. A recent study by the Hudson Institute and the Wisconsin Housing Partnership[5] found that the most important factor for individuals to successfully move from welfare to work was their ability to find decent, stable affordable housing.

A review of housing stock values for the Town of Mount Morris indicated that housing values were on average lower than the state average, but higher than the county average. Still, many of those units were not affordable for Town residents.

### *Owner-Occupied Housing*

In 1989, 15.1 percent of homeowners in the state and 17.7 percent of homeowners in Waushara County were paying a disproportionate amount of their income for housing (Appendix B, Table B-10). Residents in the Town of Mount Morris had an easier time finding affordable housing than the State and County. In 1989, 10.4 percent of Mount Morris residents were spending more than 30% of their income on housing.

**Figure 2-4. Change in Median Housing Values Compared To Change in Median Household Income, 1989 to 1999**



*Source: U.S. Census, 1990 and 2000.*

[5] Rebecca J. Swartz, Brian Miller with Joanna Balsamo-Lilien, Hilary Murrish, 2001. *Making Housing Work for Working Families: Building Bridges between the Labor Market and the Housing Market*.

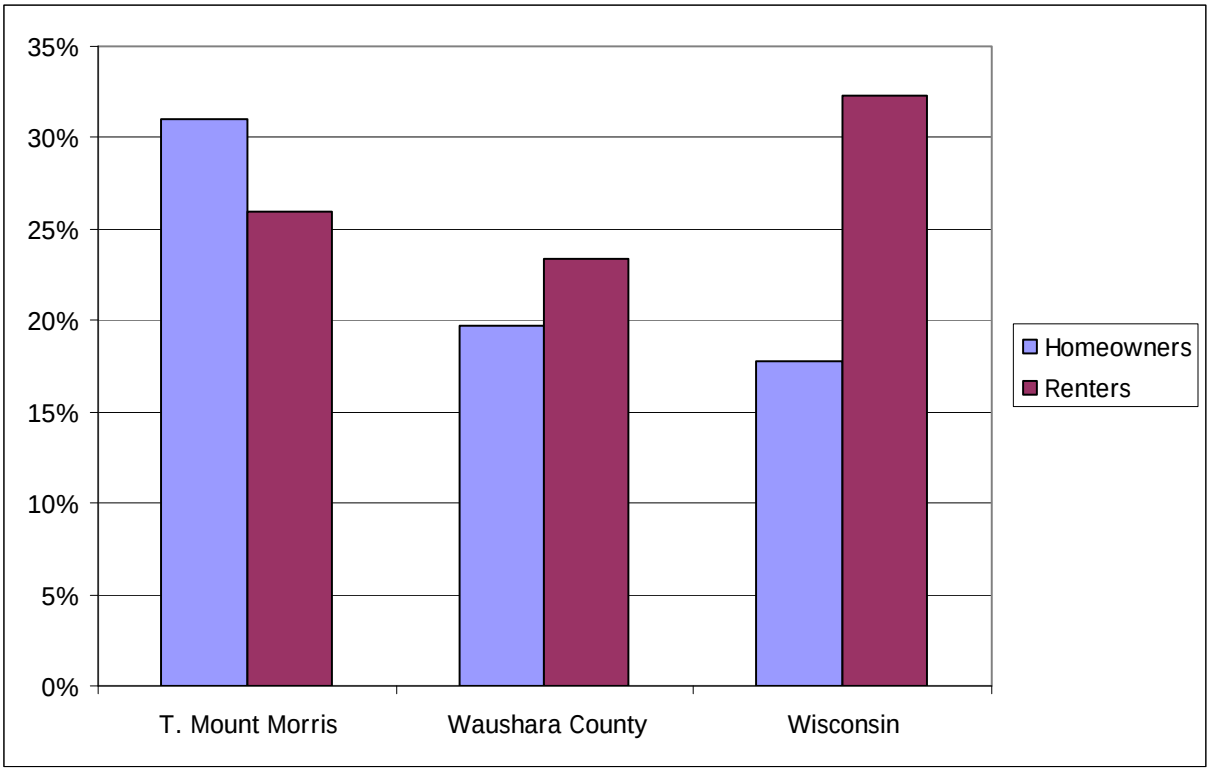
***Between 1989 and 1999, housing affordability became a larger issue for homeowners in the Town of Mount Morris, Waushara County, and Wisconsin. The percentage of homeowners paying a disproportionate share of their income for housing in Mount Morris increased to 31 percent.*** Almost twenty percent (19.7%) of County residents were paying a disproportionate share of their income for housing in 1999, compared to 17.8 percent of state residents. The change in housing affordability likely resulted from housing prices and values rising faster than incomes. All three jurisdictions had housing prices raise faster than household median income (Figure 2-4).

### *Renter-Occupied Housing*

Census data indicates that renters had a far greater difficulty finding affordable housing than homeowners. In 1989, 36.0 percent of renters in the state and 34.6 percent of renters in the county paid a disproportionate share of their income for housing, compared to 15.1 percent and 17.7 percent of homeowners, respectively. ***In the Town of Mount Morris, thirty percent of renters paid a disproportionate amount of their income for housing, compared to 10.4 percent of homeowners*** (Appendix B, Table B-10).

Between 1989 and 1999, the number of households paying a disproportionate share of their income for rental housing increased in the Town of Mount Morris, while the share decreased. In Waushara County and Wisconsin, both the number and share of renters paying a disproportionate portion of their income on housing decreased.

**Figure 2-5. Percent of Households for which Housing is Not Affordable, 1999**



*Source: U.S. Census, 2000.*

***By 1999, the share of renters paying more than 30% of their income for housing had decreased to 26.1% in the Town*** (Figure 2-5). Thirty-two percent (32.3%) of state residents were paying more than 30% of their income for rental housing, compared to 23.4 percent of Waushara County residents, which indicates that rent was more affordable for the renters who remained in Mount Morris than for renters at the state level.

### Housing Conditions

Two Census variables often used for determining housing conditions include units which lack complete plumbing facilities and overcrowded units. Complete plumbing facilities include hot and cold piped water, flush toilet and a bathtub or shower. If any of these three facilities is missing, the housing unit is classified as lacking complete plumbing facilities. The Census defines overcrowding as more than one person per room in a dwelling unit.

***In 2000, three occupied units without complete plumbing facilities existed in the Town of Mount Morris.*** There were no overcrowded dwelling units identified within the Town (Appendix B, Table B-11)[6].

### Subsidized and Special Needs Housing

Subsidized and special needs housing should be available for individuals who, because of financial difficulties, domestic violence situations, disabilities, age, alcohol and drug abuse problems, and/or insufficient life skills, need housing assistance or housing designed to accommodate their needs. In some instances, extended family structures and finances may allow families or individuals to cope privately with special needs. Two such examples would be when a child cares for an elderly parent in their own home or when a parent cares for a disabled child in their own home. In most instances, however, some form of assistance is needed. The housing needs of these populations vary based on their circumstances, health, economic conditions and success of educational, training, treatment or counseling programs.

Table 2-3 shows the location of federally assisted rental units by type for Waushara County. ***The closest access to subsidized housing for qualifying elderly, families and persons with disabilities for Town of Mount Morris residents is within the City of Wautoma or the Village of Wild Rose.***

**Table 2-3. Federally Assisted Rental Units, 2005**

| County | Jurisdiction | Elderly Units | Family Units | Other Units | Total Units |
|---|---|---|---|---|---|
| Waushara | C. Wautoma | 32 | 14 | 2 | 48 |
| | V. Coloma | 0 | 12 | 0 | 12 |

[6] US Census 2000.

Assisted living options in the area are listed in Table 2-4. All elderly housing options listed for the area are located in nearby incorporated communities. No units or facilities were listed within the Town of Mount Morris. This likely reflects the fact that funding agencies are more likely to provide resources and developers are more likely to build these facilities in areas with easy access to health care, transportation, other services and grocery stores. Since many residents in these facilities may have mobility limitations, they may also prefer to be located in an area with easy access to goods and services.

**Table 2-4. Assisted Living Options, 2005**

| County | Jurisdiction | Adult Family Home Capacity | Community Based Res. Care Facility Capacity | Residential Care Apartment Units | Total Units |
|---|---|---|---|---|---|
| Waushara | C. Wautoma | 11 | 70 | 53 | 134 |

## Housing Needs Analysis

As part of the regional planning process, ECWRPC developed a matrix of housing conditions to measure housing stress within the region. This matrix uses a combination of ten Census variables to measure five housing characteristics: housing affordability, housing availability, the prevailing age of units compared to housing values, overcrowding and presence of plumbing facilities. A compilation of these variables show that the Town has a minor amount of housing stress (Appendix B, Tables B-12 and B-13) which the Town should address. Based on inventory analysis, the largest housing issue facing the Town of Mount Morris is Owner Occupied and Rental Affordability.

### *Housing Affordability*

Housing affordability is currently an issue in the Town. Homeowners, in particular, have a difficult time affording housing costs. The need for affordable housing can be addressed by building units which are affordable for residents, subsidizing the housing costs for existing units, and/or increasing incomes to make the existing housing more affordable.

### *Housing Available for Rent or Sale*

The Town of Mount Morris has an adequate rental vacancy rate. However, given the small number of units available, the community may wish to evaluate the market demand to see if the units for rent provide an adequate choice for those seeking to rent. The homeowner vacancy rates indicate that the Town has an adequate owner-occupied housing market. Since the number of units for sale in the Town is small, this may discourage households from moving into the Town of Mount Morris.

### *Age of Occupied Dwelling Units and Owner-Occupied Housing Values*

This variable compares the percentage of housing stock that was over 40 years of age to the percentage of housing stock that is valued at less than $50,000. Four percent of the housing stock in Mount Morris is valued at less than $50,000. So while 30.9 percent of the housing stock is over 40 years old, it is likely that most of these units are well maintained.

### *Overcrowding*

In 2000, overcrowding did not affect any households in the Town of Mount Morris. However, overcrowding could increase if households choose to double up or move to smaller units in an effort to lower their housing costs.

### *Plumbing*

There were three units lacking complete plumbing facilities.

## Community Input Regarding Housing Needs

Statistical information can only capture a portion of the information necessary to determine housing needs and a community's ability to meet those needs. Market demand and supply characteristics (capacity), socio-economic changes (fluidity) and personal desires and biases (individual choice/NIMBYism[7]) also influence housing needs.

### *Continuum of Care Needs Assessment*

The Continuum of Care[8] Needs Assessment was a county-wide effort to identify housing resources and to identify and prioritize housing needs of homeless persons within the county. As such, it was a more focused assessment. A number of agencies and individuals were included in this information gathering process including: Waushara County's Department of Human Services, Community Programs, UW-Extension and Job Center; WI Department of Workforce Development Migrant, Refugee and Labor Services; Family Health Medical and Dental Center; All-Area Counseling; CAP Services; and Legal Action of Wisconsin. Individual participants included two homeless members, a representative from the Waushara County Coordinated Community Response Team for domestic violence issues, three persons of Hispanic Origin and 11 victims of domestic violence. A variety of needs were identified, including affordable housing, transportation, childcare, education, employment, medical care, counseling/case management, legal services, and others. When these needs were prioritized, affordable permanent housing ranked as the number one need in Waushara County. The need for permanent affordable housing was followed by affordable transitional housing, legal services, case management/assistance with linkage to other community resources, support groups and assistance obtaining employment or training. CAP Services submitted a grant application to request funds to help meet identified needs, and was awarded $105,025, which

[7] NIMBY: Not In My Back Yard

[8] The Continuum of Care model is a coordinated effort between providers of housing and housing related services to move persons from homelessness into emergency shelter, through transitional housing to long-term affordable housing. The Continuum of Care also works to prevent persons at risk of homelessness from becoming homeless.

will be used to provide affordable housing and support services to victims of domestic abuse in Portage, Waupaca, Waushara and Marquette Counties.

### Homelessness

According to the U.S. Department of Housing and Urban Development (HUD) the term "homeless" or "homeless individual or homeless person" includes: (1) an individual who lacks a fixed, regular, and adequate nighttime residence and (2) an individual who has a primary nighttime residence that is: a supervised publicly or privately operated shelter designed to provide temporary living accommodations (including welfare hotels, congregate shelters, and transitional housing for the mentally ill); or an institution that provides a temporary residence for individuals intended to be institutionalized; or a public or private place not designed for, or ordinarily used as, a regular sleeping accommodation for human beings[9].

Even though very little information on homelessness is available for Waushara County, it does exist and should be discussed in the context of this plan. ***There are no emergency shelters in Waushara County for the general public.*** The general public must utilize shelters in Stevens Point, Oshkosh or the Fox Cities. However two shelters (Aurora Center and Naomi House) are present in the county. The Aurora Center is owned and operated by United Migrant Opportunity Services (UMOS) for seasonal migrant farm workers and their families. Naomi House is a new facility in Wautoma for pregnant women or women with children who are at risk of becoming homeless. It has a capacity for three families at a time. In 2008, they housed four women and five children.

Twice a year, a point in time survey is compiled by the Waushara County Department of Health and Human Services. ***On January 28, 2009***, the last time a point in time survey was compiled, ***four people were sheltered in an emergency shelter and six people were unsheltered.***[10] It should be noted that a point in time survey only includes information on that one day in time.

Foreclosure and eviction rates are an indication of potential homelessness or the need to double up on housing. It should be noted that the filing of an eviction action Summons and Complaint with a court date (in 7 days), meets HUD's definition of homelessness. The filing of a foreclosure case is not an immediate threat of homelessness because of Wisconsin's redemptive period which is either six or 12 months from when the judgment is granted. Additionally a filing does not indicate how many judgments were granted. ***In 2008, there were 169 foreclosure actions filed in Waushara County, which was a 47 percent increase from the 115 that were filed in 2007.*** Evictions also increased between 2007 and 2008. ***In 2008 there were 48 eviction actions or a 41 percent increase from 2007 when a total of 34 eviction actions took place.***[11]

The school district homeless coordinator's report also indicates that more students in Waushara County are homeless. During the 2007/2008 school year, nine students were reported as being

[9] The United States Code contains the official federal definition of homeless. In Title 42, Chapter 119, Subchapter 1.
[10] Wisconsin Point in Time Form, for Waushara County Department of Human Services, January 28, 2009.
[11] HUD's Emergency Shelter Grant, Transitional Housing Program, Homelessness Prevention Program Grant Application for 2009/2010.

homeless. As of February 2009, a total of 12 students have been reported as homeless for the partial school year of 2008/2009.

Other homeless information that has been reported in the county includes: seven transient homeless individuals were served in 2008[12]; and four household lodging vouchers were issued by the county.

**Key Findings**

***Age of Occupied Dwelling Units***

- Census information regarding the age of owner-occupied units indicates that the Town of Mount Morris was well established by 1970.
- Between 1990 and 2000, the Town of Mount Morris experienced a greater level of growth in owner-occupied units than was indicated in previous Census periods (1960 to 1990) based on the age of structure information provided in the 1990 and 2000 Censuses.

***Change in Structural Type***

- As with most rural communities, the dominant housing type in the Town of Mount Morris is single family housing.
- By 2000, the share of single family units had increased to 91.3 percent in the Town of Mount Morris, while the number and share of mobile home units decreased to 81 units or 8.1 percent of the total housing units.

***Occupancy Status***

- The majority of occupied units within the Town of Mount Morris are owner-occupied. Mount Morris has the lowest owner-occupancy rate compared to Waushara County and the State.

***Vacancy Status***

- In 2000, the Town of Mount Morris had a homeowner vacancy rate of 1.4 percent, which indicates a tight housing market.
- The rental vacancy rate for the Town of Mount Morris (6.0%) was greater than Wisconsin's (5.6%) and less than Waushara County (6.8%).
- Between 1990 and 2000, the share of vacant units identified as seasonal decreased from 93.0 percent in the Town of Mount Morris to 91.2 percent.

***Owner-Occupied Housing Stock Value***

- Between 1990 and 2000, median housing values in the Town of Mount Morris increased by 102 percent. By 2000, the median housing value for the Town of Mount Morris was $108,000, up from $53,500 in 1990.

[12] Waushara County DHS Report for Year 2008.

- Sixty-eight percent of the owner-occupied housing stock in the Town of Mount Morris was valued at less than $150,000 in 2000.

### *Housing Affordability*

- Between 1989 and 1999, housing affordability became a larger issue for homeowners in the Town of Mount Morris, Waushara County, and Wisconsin. The percentage of homeowners paying a disproportionate share of their income for housing in Mount Morris increased to 31 percent.
- In the Town of Mount Morris, thirty percent of renters paid a disproportionate amount of their income for housing, compared to 10.4 percent of homeowners in 1989.
- By 1999, the share of renters paying more than 30% of their income for housing had decreased to 26.1% in the Town.

### *Housing Conditions*

- In 2000, three occupied units without complete plumbing facilities existed in the Town of Mount Morris.

### *Subsidized and Special Needs Housing*

- The closest access to subsidized housing for qualifying elderly, families and persons with disabilities for Town of Mount Morris residents is within the City of Wautoma or the Village of Wild Rose.

### *Homelessness*

- There are no emergency shelters in Waushara County for the general public.
- On January 28, 2009, four people were sheltered in an emergency shelter and six people were unsheltered.
- In 2008, there were 169 foreclosure actions filed in Waushara County, which was a 47 percent increase from the 115 that were filed in 2007.
- In 2008 there were 48 eviction actions or a 41 percent increase from 2007 when a total of 34 eviction actions took place.

## INTERRELATIONSHIPS WITH OTHER PLAN ELEMENTS

Housing cannot be considered in isolation from other elements. Meeting the housing needs of all Mount Morris residents requires an adequate supply of reasonably priced land with the appropriate infrastructure, utilities and services, coupled with access to employment opportunities and dependable transportation options. Decisions regarding economic development, transportation, community and public facilities development, environmental quality and land use have an impact on housing choice, supply and affordability. Likewise, decisions made in the housing sector can influence the cost and efficiency of other plan elements.

## Economic Development

Affordable housing is an integral part of a comprehensive economic development strategy. Companies are reluctant to relocate to communities without affordable housing for their workers. Existing companies may move out of the area if they cannot attract an adequate labor force. Labor shortages and high turnover rates resulting from a lack of affordable housing reduce service and productivity, increase administration and training costs, thereby discouraging business development and expansion. In addition, households which must spend a disproportionate amount of their income on housing will not have the resources to properly maintain their housing, nor will they have adequate disposable income for other living expenses, such as transportation, childcare, healthcare, food, and clothing. All this in turn has a negative impact on the overall economy.

Redevelopment of vacant industrial or commercial properties could bring these properties back onto the tax rolls, increase revenue and improve the overall appearance of the community. In some instances, these buildings or locations may be more appropriate for commercial or industrial redevelopment. In other instances, or perhaps in combination with commercial redevelopment, the adaptive reuse of these properties may provide unique housing options and increase the supply of affordable housing, elderly housing and utilize space and structures which may no longer be appropriate for commercial or industrial uses. Apartments above stores can help retail and service establishments supplement their income. Appropriate home based businesses and/or owner-occupied units above or behind retail and service establishments can increase housing affordability, lower transportation costs and perhaps increase access to goods and services within the Town.

## Transportation

A mix of transportation options is critical to meet personal mobility needs and decrease social isolation for individuals and individual households, particularly for those unable or unwilling to drive. Sidewalks and pedestrian/bicycle trails can provide a healthy, low cost alternative to the automobile for small unincorporated areas where homes, schools, places of business, employment and recreational facilities are in close proximity. For the majority of the area, however, paratransit service or a volunteer driver pool may be needed for those who cannot drive.

A good road network and highway system helps provide access to greater economic opportunities beyond those in the immediate vicinity, which can contribute to housing affordability, provided transportation costs to those areas is not prohibitive. As transportation costs rise, carpooling and vans may be a more cost-effective means of traveling between homes and places of employment.

## Utilities and Community Facilities

Affordable housing and upscale employment are linked to education, experience and updating job skills. Financial literacy and life skills also help ensure households make good financial decisions and have the wherewithal to properly maintain their housing unit. As a result, a strong school system which adequately prepares students to meet the demands of the workplace is critical. Adult education, job training, retooling and programs to connect individuals with better economic opportunities also contribute to housing affordability.

Programs/agencies which provide counseling, financial and investment literacy, life skills training and support groups/services contribute to household stability.

Good law enforcement, fire and EMS services are important to public and household safety. In turn, housing units and properties must be maintained, as poorly maintained housing may pose a health and/or fire hazard. Cluttered or overgrown drives may also limit emergency access to properties.

Accessible, reliable and affordable electrical and heating sources and services contribute to housing safety and affordability. Accessible, affordable and environmentally safe water and waste disposal sources and services are critical to public safety and housing affordability.

Other community and public facilities such as waste disposal options, recycling facilities, parks, libraries, childcare, eldercare, medical facilities and emergency shelters also contribute to an area's quality of life and the wellbeing of individual households. Communication, cooperation and coordination with the entities that provide these services are important to ensure Mount Morris residents have access to these services. New residents may appreciate information regarding the location and accessibility of these services.

### Agricultural Resources

As new households are formed, more land will be converted from farms, forests and open space to residential uses. Farmland in Mount Morris is also under pressure from seasonal home development. The amount of land converted will vary depending on the choices made in terms of the density, design and placement of that development.

Choices must be made. Residential land uses have higher property values than farmland, so their expansion is seen as an opportunity to increase tax revenues. Little attention is paid to net tax gains, even though various Farmland Trust studies[13] have shown that the cost of services for other forms of development, particularly single family residential, typically exceeds tax revenues generated by that development, while taxes generated by farmland exceed the cost of services for farmland.

As farmers reach retirement age, many of these individuals see farmland conversion as a quick, easy retirement option, especially in the face of increased conflicts between the realities of farming and the expectation of exurban residents. Modern day industrial farming requires substantial monetary investments, which makes it difficult for young farmers to enter the field. Farming is also under considerable economic pressure, as production costs rise and profits from food sales shift away from farmers to food processing and sales.

Allowing a farmer to develop his land provides housing opportunities and cash benefits for that farmer. However, it also increases the need for additional public services which require additional tax revenues. Nonfarm development may also cause economic, land use and transportation conflicts for the farmer who wishes to maintain or expand his operation.

[13] American Farmland Trust, 2004. *Farmland Information Center Fact Sheet: Cost of Community Services Studies*.

## Natural Resources

Building materials, such as lumber and nonmetallic resources are needed for residential development. The density and location of residential development also impacts the amount of land consumed for development and can fragment ecosystems and place undue pressure on our natural resources. As humans consume more land, the amenities, such as the open space and farm and forest land that attracted initial settlement disappears. Human/animal interaction also increases. Communities must deal with a rising number of complaints about bird feces in parks and on lawns; deer and rabbits damaging trees, shrubs and gardens; and in some instances bears foraging through dumps and garbage cans. Pressure is also placed on fragile wildlife habitats, such as migration corridors.

Many communities have established large minimum lot sizes in an effort to preserve rural character. However, the demand for large lot subdivisions, scattered site housing and seasonal homes is, in reality, fragmenting wildlife habitats and changing the appearance and character of the landscape. If communities have an interest in preserving natural resources and/or their rural character, other implementation tools may better serve that objective.

## Cultural Resources

The existing housing stock in the Town of Mount Morris is an important resource. It provides community character and reflects the historical development of the area. In some instances, the material in some of these units is no longer available. To lose these units is to reduce housing choices and to lose a part of the area's history, cultural and community identity.

Environmental regulations designed to protect the health and safety of individuals such as the lead base paint remediation and asbestos removal rules are extremely costly to implement. These regulations make it cost prohibitive to retain historical features on affordable properties, which are not on the historic register and/or eligible for the historic register, yet contain period features. However, removing these historical features destroys the home's character and lowers its potential market value.

## Land Use

An adequate supply of reasonably priced land is a critical component for affordable housing. How much land is required depends on the density, design and placement of residential development. Density, design and placement of residential development not only impacts the amount of land consumed for development, it also impacts the effectiveness and efficiency of public services (law enforcement, fire, roads, etc.), the cost of public and social services, the quality of the environment, the ease of access to goods and services and the mobility of those unable or unwilling to drive automobiles.

Residential, commercial and industrial demand for land increases the value of that land. As land prices rise, converting that land from farm, forest and open space becomes more attractive; and long term consequences such as farm and forest land shortages, loss of wildlife habitat, increased public costs, changes in community character and lack of open space are often not considered.

### Intergovernmental Cooperation

All levels of government influence housing supply, availability, location, choice and access. Interaction between government, nonprofit and private sectors can facilitate or discourage housing affordability, choice and access.

## POLICIES AND PROGRAMS

### Regional, County and Local Policies

East Central recently completed a regional comprehensive plan. Five core housing goals have been identified:

- To help ensure that an adequate supply of affordable housing in the region exists to support economic development efforts and ensure that every household has access to shelter.

- To work with others to increase housing options, so that housing choices better reflect the need of individual households.

- To support the preservation and rehabilitation of the existing housing stock within the region.

- To promote increased coordination and cooperation between governments, and between public, nonprofit and private sectors to increase housing affordability, choice and access within the region.

Housing is designed to foster community and neighborhood cohesion and available housing choices are integrated with community facilities and multimodal transportation.

In January 2004, East Central adopted the report, *Overcoming Barriers to Affordable Housing in the East Central Region.* This report is a compilation of input from urban and rural residents, who identified barriers to affordable housing in their communities and suggested potential solutions that local citizens, county and local governments, developers and other housing providers can use to address these issues. Some of the identified issues and potential solutions which are pertinent to residents in the Town of Mount Morris include senior housing issues, farm worker and migrant housing issues, absentee landlords, income and economic development barriers and access to funding, to name a few. This report is available online at: www.eastcentralrpc.org and through the ECWRPC office. Communities and agencies are encouraged to review the options presented and choose the best option or combination of options which best serve the needs of their residents and clients. Communities and individuals from the private and nonprofit sectors are encouraged to develop additional solutions and share those solutions with others to help improve the quality of life for all residents in our communities.

CAP Services is a regional community action program which aids low income persons in attaining economic and emotional self-sufficiency. They use a number of strategies to reach this goal, including advocacy, administering programs and grants, developing resources and

partnering with public, private and other nonprofit or community groups. CAP Services provides a number of services in Waushara County. They also work closely with other agencies. For example, CAP Services partners with the Waushara County Habitat for Humanity to make more efficient use of nonprofit resources. During the 2005 Continuum of Care application process, CAP Services met with a number of agencies and individuals to identify and prioritize housing needs within Waushara County. These agencies included: the Waushara County Department of Human Services, Community Programs, UW-Extension and the Job Center; the WI Department of Workforce Development Migrant, Refugee and Labor Services; Family Health Medical and Dental Center; All-Area Counseling; and Legal Action of Wisconsin. These agencies plan to meet on a quarterly basis to discuss how best to meet the needs of the area's homeless, including the Hispanic/Latino population.

Waushara County has a number of departments which impact access to housing and housing services for residents in the Town of Mount Morris. Some departments such as the Departments of Aging, Human Services, UW-Extension and the Veteran's office provide information and support for residents. Other departments such as Land Records, Public Health, Register of Deeds and Zoning and Land Conservation engage in administrative functions such as enforcing codes and zoning ordinances and collecting fees. These administrative functions can aid or hinder a community's ability to meet the housing needs of their residents.

The Town of Mount Morris relies on Waushara County to administer and enforce the uniform dwelling code (UDC). Some communities in the state have found that enforcing the state's uniform dwelling code is not necessarily compatible with preserving some of their existing and historical housing stock. Many of these structures are decent, safe and affordable, but they do not conform to the UDC. This potential conflict can be resolved by adopting a separate building code for older structures which protects the characteristics of those structures while also protecting the health and safety of residents.

### Federal, State and Regional Programs

Funding and technical assistance for housing programs are available from several federal, state and regional agencies. A listing of these programs follows.

#### *Federal Agencies*

#### United States Department of Agriculture

**Rural Development Housing Programs.** USDA Rural Development offers a variety of housing products including single family, multi-family and farm labor housing products. Assistance can be in the form of a loan, grant or technical assistance. Information about individual products can be obtained from the USDA Rural Development website at: http://www.rurdev.usda.gov/rhs. Website information is provided in English and Spanish. Information can also be obtained from the state USDA Rural Development office, which is located in Stevens Point. Their phone number is: (715) 345-7615.

#### United States Department of Housing and Urban Development

**Brownfield Economic Development Initiative Grant.** This grant can be used for brownfield sites (converting old industrial to residential). BEDI and Section 108 funds must be

used in conjunction with the same economic development project, and a request for new Section 108 loan guarantee authority must accompany each BEDI application. Funds can be used to benefit low-moderate income persons, prevent/eliminate slum and blight, and address imminent threats and urgent needs (usually follow the same guidelines as CDBG). More specifically, funds can be used for land writedowns, site remediation costs, funding reserves, over-collateralizing the Section 108 loan, direct enhancement of the security of the Section 108 loan, and provisions of financing to for-profit businesses at below market interest rates. The maximum grant amount is $1 million, and the minimum BEDI to Section 108 ratio is 1:1. For more information, contact David Kaminsky in HUD's Office of Economic Development at (202) 708-0614 ext. 4612 or visit the web site at: http://www.hud.gov/offices/cpd/economicdevelopment/programs/bedi/index.cfm.

**Community Development Block Grant (small cities).** Small cities, villages, and towns with populations of less than 50,000 are eligible to apply for this grant. Funds are used for housing and neighborhood improvement activities for low to moderate income households, including rehabilitation, acquisition, relocation, demolition of dilapidated structures, and handicap accessibility improvements. The Small Cities Community Development Block Grant is administered by states. For more information, visit the Wisconsin Department of Commerce Bureau Housing website at:http://commerce.wi.gov/housing/cd-boh-Community-Development-Block-Grant-CDBG.html, or contact Caryn Stone at (608) 267-3682.

**Fair Housing Assistance Program (FHAP).** The federal fair housing law makes it illegal to discriminate in housing based on race, color, national origin, religion, sex, disability or familial status (i.e., the presence of children) in the sale, rental, or financing of housing. The State of Wisconsin also makes it illegal to discriminate based on age, marital status, lawful source of income and sexual orientation. FHAP provides funds to states to conduct intake of fair housing complaints, investigate complaints, counsel those who believe they have been denied equal access to housing and do systemic investigations. The program also provides outreach and education to consumers, advocates and the general public and technical assistance and training for real estate agents, property owners and managers and other members of the housing industry. General information about the FHAP can be obtained from the HUD website: http://www.hud.gov/offices/fheo/partners/FHAP/index.cfm. For local information and assistance, Waushara County residents and officials should initially contact the Wisconsin Department of Workforce Development Equal Rights Division Civil Right Bureau. Visit their website at: http://www.dwd.state.wi.us/er/ or contact LeAnna Ware at: (608)266-1997.

**Multi-family Housing Programs.** HUD offers a number of multi-family programs through the state. These programs fund facility purchases, construction, rehabilitation, lead based paint abatement[14], energy conservation and accessibility improvements. For more information, visit the Wisconsin Department of Commerce Bureau Housing website at: http://commerce.wi.gov/housing/#HomePrograms or contact CAP Services ((920) 787-3949), as CAP Services administers many of these programs in Waushara County.

**Public Housing Programs.** HUD offers a number of public housing programs for the development/redevelopment or management of public housing authorities, rental assistance through the Section 8 program and some limited homeownership opportunities. General

[14] Home Lead Assessments are only performed after a child has been poisoned.

information can be found at: http://www.hud.gov/progdesc/pihindx.cfm. Waushara County currently has no public housing authority.

**Single Family Housing Programs.** HUD offers a number of single family home programs, including homebuyer education and counseling, downpayment assistance, rehabilitation, weatherization, mortgage insurance and reverse mortgages. For general information, visit HUD's website at: http://www.hud.gov/offices/hsg/sfh/ins/singlefamily.cfm. Some of these products, such as FHA loans, are available through approved lending institutions. Access to HUD single family home programs can also be obtained through WHEDA or the Wisconsin Department of Commerce Bureau Housing. Information about products WHEDA provides can be found on WHEDA's website at: http://www.wheda.com/root/WhedaProducts/Residential/Default.aspx?id=182, or you may contact: Arlene Scalzo at: 1-800-334-6873 Ext. 623 for information. For information about products provided through the state Bureau of Housing, visit the Wisconsin Department of Commerce Bureau Housing website at: http://commerce.wi.gov/housing/#HomePrograms or contact: Betty Kalscheur at (608) 267-6904. CAP Services also administers some single family home programs in Waushara County. The local phone number for CAP Services is (920) 787-3949. Their website address is: http://www.capserv.org/pages/About_Us.html.

**Special Needs Programs.** HUD also funds programs for special need populations through the state. Information regarding emergency shelter/transitional housing programs or housing opportunities for people with AIDS can be found at the Wisconsin Department of Commerce Bureau Housing website at: http://commerce.wi.gov/housing/#HomePrograms or by contacting Judy Wilcox at: (608) 266-9388. The state strongly encourages joint emergency shelter/transitional housing (ESG/THS) grant applications. CAP Services has willingly served as the grant writer for ESG and THS grant applications for Waushara County agencies.

### Federal Financial Institutions Examination Council

**Community Reinvestment Act.** Through the Community Reinvestment Act (CRA), banks/financial institutions help meet the credit/investment needs of their markets with the primary purpose of community development. This is in part accomplished through direct grants/investments or loans to nonprofits or agencies to develop affordable housing. Direct loans are also given to individual households of which a certain percentage must go to low to moderate income households. More information can be obtained from their website: http://www.ffiec.gov/cra/default.htm or from your local financial institution.

### United States Department of Veterans Affairs

**Home Loan Guaranty Service.** The Veterans Administration provides a variety of benefits for eligible veterans and their dependents. Housing products include low cost loans for purchase, construction or repair of owner-occupied housing. General information can be obtained from the Veteran's Affair website at: http://www.homeloans.va.gov/index.htm. Two Waushara County websites provide information for veterans and their dependents: http://www.co.waushara.wi.us/veterans.htm and http://www.visitwaushara.com. The Waushara County Veterans Service Office can also be contacted at (920) 787-0446 for information about specific programs.

### *National Organizations*

**National Association of Home Builders (NAHB).** The National Association of Home Builders is a trade organization that represents the building industry. They provide information and education about construction codes and standards, national economic and housing statistics, a variety of housing issues, jobs within the housing industry and information about local builders who are members of their organization. Visit their website at: http://www.nahb.org/ for more information.

**National Low Income Housing Coalition (NLIHC).** NLIHC is a national advocacy group which conducts research on low income housing issues, provides information and data on a variety of housing or housing related issues affecting low income families and publishes reports and data regarding low income housing issues and legislation. Their mission is to end the affordable housing crisis for low income families. Information about NLIHC and its activities can be found at: http://www.nlihc.org/. NLIHC also has a number of state partners. Wisconsin has two State Coalition Partners, the Wisconsin Partnership for Housing Development, Inc. and Housing For All. For information about the Wisconsin Partnership for Housing Development, visit their website at: http://www.wphd.org/ or call their Madison office at: (608) 258-5560. For information about Housing For All, contact Brian Peters of Independence First at: (414) 291-7520.

**United Migrant Opportunity Services (UMOS).** UMOS works with federal, state and local agencies, employers, for profit and nonprofit agencies to meet the housing needs of migrant workers. Call: (920) 787-4617 for information about services and programs in Waushara County. UMOS also operates an emergency shelter in Aurora for a portion of the year. When the Aurora Center Emergency Shelter is open, it can be reached at: (920) 361-1266. Otherwise, persons needing shelter should call (800) 279-8667 for assistance. Information about UMOS's housing programs can also be found on their website at: http://www.umos.org/social_services/housing_overview.aspx.

### *State Agencies*

#### University of Wisconsin - Extension

**Family Living Program.** The family living program provides assistance to families through Waushara County. Some of these programs include financial education and parent education.

**Homeowner Resources.** UW-Extension provides a number of publications and materials to aid homeowners. Topics include home care, home maintenance and repair, life skills, financial information, gardening, landscaping, pest control, etc. These publications may be obtained through the Waushara County UW-Extension office, or accessed online at: http://www.uwex.edu/ces/house/ or through http://infosource.uwex.edu/.

**Housing – Ownership and Renting.** UW-Extension provides a website which includes information on home maintenance and repair, a seasonal newsletter, and Rent Smart, which is a tenant education program. This website is located at: http://www.uwex.edu/ces/house/housing/renting.cfm. Publications are also included in Spanish.

**Housing Specialist.** Dr. Marc Smith is the state UW-Extension Housing Specialist. He is located in the UW-Madison School of Human Ecology. His position priorities include assistance with the following topics: local housing policies, homeownership training, housing needs assessment, post-purchase support and housing program evaluation. He can be reached at: (608) 262-2831.

### Wisconsin Department of Agriculture, Trade & Consumer Protection (DATCAP)

**Consumer Protection.** DATCAP publishes a number of resources for renters, landlords and homeowners. Some of these are short fact sheets: others, such as "The Wisconsin Way: A Guide for Landlords and Tenants", are longer publications. These publications can be found on DATCAP's website at: http://www.datcp.state.wi.us/cp/consumerinfo/cp/factsheets/index.jsp.

### Wisconsin Department of Commerce

**Bureau of Housing.** This department helps to expand local affordable housing options and housing services by managing a number of federal and state housing programs and providing financial and technical assistance. Visit their website at: http://commerce.wi.gov/housing/ for additional information. The Bureau of Housing also administers WIFrontDoor, which is a collaborative program with WHEDA and the WI Department of Health and Family Services. This website, located at: http://www.wifrontdoorhousing.org/, is a searchable statewide data base designed to help connect those looking for affordable housing with those providing housing and housing services. The website is searchable by location, unit size, availability, accessibility and cost of rent. Landlords and property managers can list their properties; they are also responsible for updating information about their properties. Renters can search for housing and services to fit their needs.

**Migrant, Refugee and Labor Services.** This department coordinates services for migrants, foreign-born residents and their families and employers who hire foreign and Limited English Proficient workers. Information regarding these services and contact information can be found at: http://dwd.wisconsin.gov/migrantsandrefugees/.

### Wisconsin's Focus on Energy

**Focus on Energy.** This public private partnership offers a variety of services and energy information to energy utility customers throughout Wisconsin. To learn about the programs and services they offer, visit their website at: http://www.focusonenergy.com.

### Wisconsin Historical Society

**Historic Preservation.** The Wisconsin Historical Society offers technical assistance and two tax credit programs for repair and rehabilitation of historic homes in Wisconsin. One tax credit program provides state tax credits; the other program provides federal tax credits. The Wisconsin Historic Society also provides grants to local governments and nonprofit organizations for conducting surveys and developing historic preservation programs. For additional information, visit: http://www.wisconsinhistory.org/hp/

### Wisconsin Housing and Economic Development Authority (WHEDA)

**WHEDA Foundation.** The WHEDA Foundation awards grants to local municipalities and nonprofit organizations through the Persons-in-Crisis Program Fund to support the development or improvement of housing facilities in Wisconsin for low-income persons with special needs. Special needs is defined as homeless, runaways, alcohol or drug dependent, persons in need of protective services, domestic abuse victims, developmentally disabled, low-income or frail elderly, chronically mentally ill, physically impaired or disabled, persons living with HIV, and individuals or families who do not have access to traditional or permanent housing. For more information, visit WHEDA's web site at: http://www.wheda.com/root/AboutWheda/FoundationGrants/Default.aspx?id=72, or contact: Arlene Scalzo at: 1-800-334-6873 Ext. 623.

**WHEDA Multi-family Products.** WHEDA offers a number of multi-family home products, including tax credits, tax exempt bond funding, construction, rehabilitation and accessibility loans, asset management and tax credit monitoring services. For information about this program, visit WHEDA's web site at http://www.wheda.com/programs/grants/about.asp, or contact: Diane M. Schobert at: 1-608-266-0191.

**WHEDA Single Family Products.** WHEDA offers a number of single family home products, including home improvement or rehabilitation loans, homebuyer assistance and homebuyer education. For information about this program, visit WHEDA's web site at http://www.wheda.com/programs/grants/about.asp, or contact: Arlene Scalzo at: 1-800-334-6873 Ext. 623.

**Wisconsin Affordable Assisted Living.** WHEDA and the Wisconsin Department of Health and Family Services have partnered to create affordable assisted living for low-income seniors. Through this partnership, housing costs are reduced and assistance is provided to help access the Medicaid program to pay for services. Information regarding elderly statistics, available services, and consumer links to directories of adult day care programs, adult family homes, community based residential facilities (CBRFs) and residential care apartment complexes (RCACs) can be found at: http://www.wiaffordableassistedliving.org/.

### *Regional Programs*

**CAP Services, Inc.** CAP Services is one of 16 community action programs in the state of Wisconsin. CAP Services offers a number of community based programs in Waushara County, including family services, housing, housing assistance, business development and preschool. CAP Services is a state-designated CHDO (Community Housing Development Organization), which means they have assess to certain restricted funds set aside to meet housing needs with-in communities. The local phone number for CAP Services is: (920) 787-3949. Information about CAP Services can also be found on their website: http://www.capserv.org/pages/byCounty.html.

# CHAPTER 3: TRANSPORTATION

## INTRODUCTION

The Town of Mount Morris is comprised of a transportation system that is made up of local roads, collectors and arterial streets. STH 152, CTH G, and CTH W are the predominant transportation corridors that converge in the center, spitting the Town into three areas. While private vehicles are the primary mode of transportation in the area, there are several biking and pedestrian opportunities available to residents and visitors.

## INVENTORY AND ANALYSIS

This chapter provides an inventory of the existing transportation, pedestrian, cycling, trucking, and airport facilities in the area. In addition, a summary of the existing transportation plans, policies and funding sources associated with these facilities are discussed.

### Streets and Highways

The primary transportation system consists of a hierarchal network of highways, byways, and other roads and streets that pass through a community. ***The entire transportation network in the Town of Mount Morris is comprised of 71.6 miles of local roads, county highways, and state highways (Table 3-1). Local town roads compromise over half (69%) of the road network.***

**Table 3-1. Road Network**

| Town of Mount Morris | | | | | | | | |
|---|---|---|---|---|---|---|---|---|
| **Total** | **IH Miles** | **% of Total** | **STH Miles** | **% of Total** | **CTH Miles** | **% of Total** | **Local Miles** | **% of Total** |
| 71.6 | 0.0 | 0% | 5.53 | 8% | 16.6 | 23% | 49.5 | 69% |

*Source: WisDOT 2008*

The hierarchy of the road network calls for each roadway to be classified according to its primary function, ranging from its ability to move vehicles (i.e., a freeway) to its ability to provide direct access to individual properties (i.e., a local street). The three general categories of functional classification used by transportation officials include arterials, collectors, and local roads.[1]

Because traffic volumes are typically a good indicator of a roadway's appropriate functional classification, the Wisconsin Department of Transportation (WisDOT) conducts traffic counts at key locations throughout the state on a regular rotating basis. Displayed as average annual daily traffic (AADT), these counts are statistically adjusted to reflect daily and seasonal fluctuations that occur on each roadway.[2] The most recent counts in Waushara County were

[1] WisDOT. 2002. *Facilities Development Manual: Procedure 4-1-5*.
[2] WisDOT. 2000, 2003 2006. *Wisconsin Highway Traffic Volume Data*.

conducted in 2000, 2003 and 2006. When a significant difference in the two counts is encountered, it can generally be explained by a road closure, detour, or similar circumstance that temporarily disrupts the normal flow of traffic.

### *Principal Arterials*

Principal arterials serve interstate and interregional trips. These routes generally serve all urban areas with populations greater than 5,000. These roadways are most important in terms of commerce and the transport of goods and services. Rural principal arterials are further subdivided into 1) Interstate highways and 2) other principal arterials. ***There are no principal arterials in the Town of Mount Morris.***

### *Minor Arterials*

In conjunction with the principal arterials, minor arterials serve other population centers and major traffic generators providing intra-regional and inter-area traffic movements. ***There are no minor arterials within the Town of Mount Morris.***

### *Major Collectors*

Major collectors provide service to moderate sized communities and other intra-area traffic generators. Major collectors often link those generators to nearby larger population centers or higher function routes.

- **STH 152** is considered a major collector stretching from the west to the center of the Town of Mount Morris where STH 152, CTH G and CTH W intersect. AADTs were collected in two locations in 2000 and in 2003. AADTs recorded at the STH 152 and Porters Lake Road intersection showed an increase of 100 vehicles per day between 2000 (1,400) and 2003 (1,500), while AADTs recorded between Bighorn Lane and Blackhawk Road generally remained consistent in the same time period (910/890).

- **CTH G** provides a northwest travel corridor from the center of the Town of Mount Morris to the Town of Springwater. AADTs increased by 40 vehicles per day between 2000 (470) and 2003 (510).

- **CTH W** is considered to be a major collector from the STH 152 intersection northeast until it exits the Town's eastern boundary line. AADTs were only collected in 2003 and averaged 480 vehicles per day.

- **CTH H** is considered a major collector from 22nd Avenue east to the Town of Mount Morris's eastern boundary. An increase of 140 vehicles per day was recorded between 2000 (370) and 2003 (510).

- **21st Lane** is considered a major collector from the STH 152, CTH S and 21st Lane intersection south to the Town's southern boundary and continues south until is crosses STH 21 into the Town of Marion. AADTs were recorded south of Buttercup Avenue and north of Hickory Road in 2000 (600) and 2003 (630).

### *Minor Collectors*

Minor collectors collect traffic from local function roads and provide links to all remaining smaller communities, locally important traffic generators, and higher function roads. All developed areas should be within a reasonable distance of a collector road.

- **CTH S** routes traffic from STH 152 southeast through the Town of Mount Morris and provides a route to the Village of Redgranite. AADTs were not recorded along STH S within the Town of Mount Morris.

### *Local Function Roads*

Local function roads provide access to adjacent land and provide for travel over relatively short distances. All roads not classified as arterials or collectors are local. These roads provide access to residential, recreational, commercial, and industrial uses within the area. WisDOT does not generally conduct official traffic counts on local function roads; however, these roads probably carry fewer than 200 vehicles per day. The Following roads are significant local roads that carry approximately 100 or more vehicles per day:

- **Bighorn Lane** - between Bighorn Court and STH 152;
- **Blackhawk Court** – between Swamp Road and Bighorn Lane;
- **Buttercup Avenue** – between John Lake Road and Oakwood Drive.

**Table 3-2. PASER Ratings and Maintenance Needs**

| Paved Road Rating | Condition | Needs |
|---|---|---|
| 9 & 10 | Excellent | None |
| 8 | Very Good | Little maintenance |
| 7 | Good | Routine maintenance, crack filling |
| 6 | Good | Sealcoat |
| 5 | Fair | Sealcoat or nonstructural overlay |
| 4 | Fair | Structural improvement - recycling or overlay |
| 3 | Poor | Structural improvement - patching & overlay or recycling |
| 2 | Very Poor | Reconstruction with extensive base repair |
| 1 | Failed | Total reconstruction |
| Gravel Road Rating | Condition | |
| 5 | Excellent | Little maintenance |
| 4 | Good | Routine maintenance |
| 3 | Fair | Regarding, ditch & culvert maintenance, additional gravel |
| 2 | Poor | Additional aggregate, major ditch & culvert maintenance |
| 1 | Failed | Complete rebuild and/or new culverts |

*Source: Transportation Information Center, UW-Madison; 2000, 2001, and 2002*

Every two years all jurisdictions in Wisconsin are required to rate the condition of their local roads and submit the information to WisDOT. The surface condition rating of each roadway is updated in the State's computer database, the Wisconsin Information System for Local Roads (WISLR). The WISLR database is available to all jurisdictions via the internet and can be used to develop a capital improvement and maintenance program. The WISLR analysis is based, in most cases, on the PASER road rating method.[3]

**Table 3-3. Total Miles of Local Roads by PASER Rating**

| Town of Mount Morris | |
|---|---|
| **Paved Road Rating** | **Total** |
| 10 | 0 |
| 9 | 1.07 |
| 8 | 6.47 |
| 7 | 9.1 |
| 6 | 8.46 |
| 5 | 8.7 |
| 4 | 10.4 |
| 3 | 0.6 |
| 2 | 2.4 |
| 1 | 0 |
| Not Rated | 0 |
| **Subtotal** | **47.2** |
| **Gravel Road Rating** | **Total** |
| 5 | 0 |
| 4 | 2 |
| 3 | 0 |
| 2 | 0.1 |
| 1 | 0.1 |
| Not Rated | 0.1 |
| **Subtotal** | **2.3** |
| **Total** | **49.5** |

*Source:* WISLR. 2008. *Wisconsin Information System for Local Roads*.

PASER pavement management system (PMS) has been developed and improved over the years by the Transportation Information Center (TIC) at the University of Wisconsin – Madison in cooperation with WisDOT and others. In general, PASER rates paved roadway surfaces on a scale of 1 to 10, with 1 being a road that needs to be reconstructed and 10 being a newly constructed road.[4] Unpaved roads are rated on a scale of 1 to 5, with 1 being a road that

[3] WISLR. 2007. *Wisconsin Information System for Local Roads*. https://trust.dot.state.wi.us/wislr/.

[4] Transportation Information Center. 2000, 2001, and 2002. *PASER Manuals: Asphalt, Brick & Block, Concrete, and Sealcoat*.

needs rebuilding and 5 being a brand new road.[5] This inventory provides the basis for developing a planned maintenance and reconstruction program and helps the town to track necessary improvements. Prompt maintenance can significantly reduce long-term cost for road repair and improvement. Table 3-3 and Appendix C provide a breakdown and display of the PASER ratings, conditions and maintenance needs.

Table 3-3 provides a summary of the total miles of local roads in the Town of Mount Morris by PASER rating. ***Approximately ninety-five percent (47.2 miles) of the roads within Mount Morris are paved.*** Of the total paved roads, roughly 16 percent (7.5 miles) of the paved roads are in excellent to very good condition and require little maintenance. ***Over three-quarters of paved roads in Town (36.6 miles, 78%) are considered to be in good to fair condition.*** While they are in good condition structurally, they will need slightly more maintenance work. This work may involve seal coating, crack filling, non-structural overlay and possibly structural improvements. The remaining local roads will require substantially more work. Approximately 3 miles (6%) of the roads (Chicago Ave from 21st Lane to CTH Z and 24th Drive from CTH W to Bighorn Lane) will require structural improvements that could involve pavement recycling, overlay and patching. There are no roads rated less than 2 within the Town of Mount Morris.

Gravel roads within the Town are also generally well-maintained. The Town has a total of 2.3 miles of unpaved roads, 87 percent (2 miles) of unpaved roads are considered to be in good condition requiring only routine maintenance, while 9 percent (0.2 miles) of the Town's unpaved roads are considered to be in poor to failed conditions (West Court from Westfork to end and John Lane from John Lake Road to end) requiring additional aggregate, major ditch and culvert maintenance or complete rebuild. One tenth of a mile of unpaved roads were listed as "not rated". A "not rated" does not necessarily mean that the road was not evaluated; it just means that it was not recorded in the WisDOT-WISLR data base.

## Rustic Roads

The Rustic Roads System was created by the State Legislature in 1973 to help citizens and local units of government preserve scenic lightly traveled country roads for the leisurely enjoyment of bicyclists, hikers, and motorists.[6] They offer excellent opportunities to travel through an attractive rustic area. The scenic qualities of these roads are protected by agreement with bordering property owners and by implementing roadside maintenance practices that allow wildflowers and other native flora to extend to the edge of the pavement. ***There are no Rustic Roads in the Town of Mount Morris.*** The WisDOT lists two roads in Waushara County that are in the Rustic Roads program. Rustic Road 48 (26th Road) is a 2.1 mile road that begins at CTH H and runs northwest to CTH W in the Town of Saxeville. Rustic Road 102 forms a loop off of STH 21 beginning at Cumberland Avenue and ending at 9th Avenue in the Town of Richford, just east of the Village of Coloma. Several other town roads within Waushara County may have the potential of being listed as a Wisconsin Rustic Road.

[5] Transportation Information Center. 2001 and 2002. *PASER Manuals: Gravel and Unimproved Roads*.
[6] WisDOT. 2005. *Wisconsin's Rustic Roads: A Positive Step Backward*. http://www.dot.state.wi.us/travel/scenic/rusticroads.htm.

## Truck Transportation

There are several designated truck routes within Waushara County. STH 21 is the primary truck transportation route in Waushara County and provides direct access to Oshkosh and the Fox Cities to the east. STH 49 provides access to Fremont and Waupaca to the north and Berlin and Waupun to the south. None of these listed routes pass trough the Town. Local truck traffic occurs on several other county highways throughout the County, but is more limited in volume.

***There are two major corridors passing through Waushara County.***[7]

- ***The Cranberry Country Corridor***[8] ***(STH 21) stretches 100 miles across the state from east to west (Oshkosh to Tomah).*** This corridor connects the Fox Valley to I39, southern Minnesota, South Dakota and beyond.

- ***The Wisconsin River Corridor (I-39/USH 51) stretches 260 miles linking north central Wisconsin to south central Wisconsin and Illinois.*** This corridor provides critical economic links for industrial and commercial communities in north central Wisconsin (i.e. Wausau, Wisconsin Rapids, Stevens Point and Marshfield.

## Railroads

***Rail service to Waushara County was discontinued several decades ago.*** The nearest rail service is available at Stevens Point, which is a division headquarters for the Canadian National railroad. Other rail lines include the Union Pacific, which passes through southern Marquette County, and the Canadian Pacific Railway, which has a major yard facility in Portage. All three lines generally connect Chicago with the Twin Cities and points westward. Amtrak utilizes the Canadian Pacific line to provide passenger service. In addition to Portage, station stops include Columbus, Wisconsin Dells, and Tomah.

## Waterways

***There are no commercial ports in Waushara County.*** The nearest commercial port is located in Green Bay. Passenger ferries are located in Manitowoc and Milwaukee. Both ports offer passage across Lake Michigan to Lower Michigan.

Several municipalities and Waushara County operate recreational boat facilities throughout the county. There are several boat landings or walk-in accesses located within the Town:

- **Big Hills Lake Launch** is located on CTH WW Road owned; by Waushara County;

- **Irogami Lake Launch** is located along Chicago Avenue owned; by the Town of Mount Morris;

- **Johns Lake Launch** is located along Johns Lake Road owned; by the Town of Mount Morris;

[7] Draft Connections 2030 Long Range Multimodal Transportation Plan
[8] WisDOT. *Connections 2030 Long-Range Transportation Plan*

- **Morris Lake Launch**
  - o located along CTH G owned; by the Town of Mount Morris;
  - o located along 20th Drive owned; by the Town of Mount Morris;

- **Morris Lake Walk-in Access** is located along STH 152 owned; by the Lake Management District;

- **Napowan Lake Launch** is located along 23rd Lane owned; by the Town of Mount Morris;

- **Napowan Lake Walk-in Access** is located along 24th Avenue and is not maintained;

- **Porters Lake Launch** is located along porters Lake Road owned; by the Town of Mount Morris.

### Pedestrian Facilities

Walking is emerging as an important exercise as well as mode of transportation. The *Wisconsin Pedestrian Policy Plan 2020* outlines statewide and local measures to increase walking throughout the state as well as promote pedestrian safety and comfort. Pedestrians, by definition, are anyone who travels by foot. In addition, this definition has been extended to disabled persons who require the assistance of a mobility device. Pedestrian traffic can be difficult along highways where sidewalks are not present, safety measures are absent, or traffic volume is heavy.

Waushara County has several pedestrian opportunities. Hiking trails are located at several county parks. The county also operates the Bannerman Trail. A trailhead is located in downtown Redgranite on the south side of STH 21. The trail provides recreational opportunities for pedestrian activities as well as cross-county skiing, bicycling, and snowmobiling. The trail utilizes the former railroad grade that served quarries located in the Redgranite/Lohrville area. The seven mile trail terminates at STH 73 north of Neshkoro. The Ice Age National Scenic Trail is a thousand-mile-long footpath located entirely within Wisconsin. It is one of only eight National Scenic Trails in the County. Approximately 60 percent of Wisconsin residents live within 20 miles of the Ice Age Trail.[9] A portion of the Ice Age Trail passes through western Waushara County (See Exhibit 3-1). The trail provides recreational opportunities through the Chaffee Creek and Mecan River State Fishery areas and the Greenwood State Wildlife Area.

Most of the town roads in Waushara County have limited shoulder areas, and the posted speed limits are 45 miles per hour or greater. These conditions often hamper safe pedestrian travel. The relatively low density development and lack of sidewalks do not facilitate increased pedestrian mobility. The centralization of goods and services often requires residents to use motor vehicles for routine trips.

[9] Ice Age Park and Trail Foundation; http://www.iceagetrail.org/faqs.htm

## Cycling Opportunities

Over 1,000 miles of highly scenic low volume roads provide abundant opportunities for bicycling in Waushara County. As such, ***Waushara County has established an interconnected system of bicycle routes throughout the county.***[10] The rolling topography offers several challenges for bicyclists of all fitness levels. The routes follow existing town roads and county trunk highways. Bicycle routes range in distance from 23 to 35 miles in length and offer several rest stops at municipal and county parks as well as local tourist attractions. ***Waushara County's Route 6 – Wautoma-Mount Morris-White River totals 27.7 miles and traverses the City of Wautoma and the towns of Wautoma, Mount Morris, Marion and Dakota*** (Exhibit 3-2). The Wautoma-Mount Morris-White River Route is one of the most challenging Waushara County routes with varying topography and steep climbs. This route highlights the White River Lower Millpond, White River crossings and the Lake Alpine County Park.

Roadways with traffic volume less than 1,000 vehicles per day are considered generally safe for bicycling. Roadways meeting this criterion that are located within a primary bicycle corridor identified by WisDOT provide potential linkages between existing bicycle trails and are considered to be part of an interconnected statewide bicycle route network. Currently, the Bannerman Trail is the only multi-use recreational trail within Waushara County.

WisDOT has made several recommendations for bicycle traffic for Waushara County in the *Wisconsin State Bicycle Transportation Plan 2020*.[11] The following recommendations have been made for the Village's bicycle traffic:

Best Conditions for bicycling:

- CTH G
- CTH H
- CTH S
- CTH W
- CTH WW
- CTH Z
- STH 152 - from the CTH G & CTH W intersection south to CTH S

Moderate Conditions for bicycling:

- STH 152 – west of the CTH S intersection

## Airports

***The four airports most convenient to area residents that provide scheduled commercial air service are: Central Wisconsin Regional Airport in Mosinee, Outagamie County Regional Airport in Appleton, Dane County Regional Airport in Madison, and Austin Straubel Airport in Green Bay.*** Other airports/airfields offering a lesser range of services include those in Oshkosh, Stevens Point, Wisconsin Rapids, Wautoma, Waupaca, and Wild Rose.

[10] Waushara County Parks Department. 2007. *Bike Routes.* http://www.co.waushara.wi.us/bike_routes.htm.
[11] WisDOT. 1998. *Wisconsin State Bicycle Transportation Plan 2020.*

Two Basic Utility airport facilities are located in Waushara County. A Basic Utility (BU) airport is capable of handling single engine piston aircraft and smaller twin engine aircraft. Basic Utility airport facilities are sub-classified as class B (BU-B) and class A (BU-A) according to the gross weight and wingspan of the aircraft. These aircraft typically seat up to six persons and are used for private corporate travel, charter flying, recreational flying, and crop dusting. The Wautoma Municipal Airport is a BU-B facility located southwest of the City of Wautoma in the Town of Dakota. The airport has two paved runways measuring 1,190 feet and 3,300 feet in length and a turf runway measuring 2,280 feet. Aircrafts with gross weights of less than 12,500 pounds and wingspans less than 49 feet can be accommodated at this airport. Besides serving local air needs, the airport is utilized by pilots attending the annual EAA fly-in in Oshkosh. The Wild Rose Idlewild Airport is BU-A facility. The airport can accommodate aircraft with gross weights less than 6,000 pounds and wingspans less than 49 feet. A helipad is also located at the Wild Rose Community Memorial hospital for "flight for life" emergencies.[12]

Several private airports are located throughout Waushara County. Private facilities are generally characterized by short (2,500 to 3,000 feet) turf covered runways. Private runways primarily provide services for recreational flyers.

### Transit and Transportation Facilities for the Disabled

***There is no scheduled bus service within the county.*** However, the Department of Aging administers two programs on a county-wide basis that serve the elderly and disabled residents of Waushara County. These two programs are a volunteer driver program and a mini-bus program. The mini-bus program is based in the City of Wautoma and provides transportation for both medical and personal trips. Other members of the public can also utilize the mini-bus if space is available.[13]

### Current and Future Transportation Projects

***There are no major transportation projects scheduled for the Town of Mount Morris.***[14] However, WisDOT has listed the following projects in Waushara County:

- CTH E Pine River Bridge Rehabilitation – Town of Leon (2010)[15]
- CTH XX Fox River Bridge Rehabilitation – City of Berlin (2010)[15]
- CTH XX – STH 21 to CTH D Resurface (2009)[15]
- STH 21 – Cambridge Street Road Maintenance – City of Wautoma (2011)[15,15]
- STH 22 – Main Street Road Maintenance – Village of Wild Rose (2011)[15]
- STH 49 – Poy Sippi to Fremont Road Maintenance (2010)[15, 15]
- STH 49 – Auroraville to Waupaca, Mosquito Creek Bridge Replacement (2010)[15, 15]
- STH 73 – Wautoma to Plainfield, Construction/Pavement Replacement (2011)[15, 15]
- STH 73 – Princeton to Wautoma, Road Resurface (2010 – 2013)[14]

County and state highways comprise the Federal Aids Secondary System, thus qualifying them for federal aid for capital projects involving construction or repair. Waushara County is

[12] WisDOT. 1999. *Wisconsin State Airport System Plan.*
[13] Baugrud, P. 2005. Personal Communication. Waushara County Aging and Disability Resource Center.
[14] WisDOT. 2004. *Wisconsin 2009-2012 Six Year Highway Improvement Program.*
[15] 2009 – 2012 Statewide Transportation Improvement Program Final, Jan. 2009. WisDOT.

responsible for routine maintenance on these roadways. Maintenance of roads such as town roads and city/village streets not on the state or county system rests with the local jurisdiction. As Table 3-1 indicates, these local roads comprised the bulk of a community's total roadway mileage. To assist communities with the cost of constructing and maintaining these roads, the state provides general transportation aids (GTA) which are available based on lane mileage and aidable local costs. Aidable local costs generally include the local share of all road and street construction and construction materials. The rate-per-mile is statutorily specified and will be $2,015 in 2009.[16] It should be noted that road spending fluctuates, especially for larger municipalities, and depends on the number and types of projects that have been allocated for that year. Cities and villages also have more costly facilities, such as curb and gutter, storm sewer, and sidewalks which raise the cost per mile above town spending amounts.

## Key Findings

### *Streets and Highways*

- The entire transportation network in the Town of Mount Morris is comprised of 71.6 miles of local roads, county highways, and state highways. Local roads comprise over half (69%) of the road network.
- There are no Principal arterials in the Town of Mount Morris.
- There are no minor arterials in the Town of Mount Morris.
- Approximately ninety-five percent (47.2 miles) of the roads within Mount Morris are paved.
- Over three-quarters of the roads in Town (36.6 miles, 78%) are considered to be in good to fair condition.

### *Other Transportation Modes*

- There are no Rustic Roads in the Village of Mount Morris.
- There are two major corridors passing through Waushara County. The Cranberry Country Corridor (STH 21) stretches 100 miles across the state from east to west (Oshkosh to Tomah). This corridor connects the Fox Valley to I39, southern Minnesota, South Dakota and beyond. The Wisconsin River Corridor (I-39/USH 51) stretches 260 miles linking north central Wisconsin to south central Wisconsin and Illinois.
- Rail service to Waushara County was discontinued several decades ago.
- There are no commercial ports in Waushara County.
- Waushara County has established an interconnected system of bicycle routes throughout the county. Waushara County's Route 6 – Wautoma-Mount Morris-White River totals 27.7 miles and traverses the City of Wautoma, and the towns of Wautoma, Mount Morris, Marion and Dakota.
- The four airports most convenient to area residents that provide scheduled commercial air service are: Central Wisconsin Regional Airport in Mosinee, Outagamie County Regional Airport in Appleton, Dane County Regional Airport in Madison, and Austin Straubel Airport in Green Bay.
- There is no scheduled bus service within the county.
- There are no major transportation projects scheduled for the Town of Mount Morris.

[16] WisDOT. 2005. *General Transportation Aids.* http://www.dot.wisconsin.gov/localgov/highways/gta.htm

## INTERRELATIONSHIPS WITH OTHER COMPREHENSIVE PLAN ELEMENTS

### Economic Development

Providing a quality transportation system is important to the economic success of the area. Businesses need to assess the transportation system as to its ability to ship and receive goods and provide access and increase visibility for customers. Employee access to the business facility is also crucial, especially if the jobs offered will be in the lower-wage category. These jobs are frequently filled by second wage-earners in the household or by persons with limited job options, including untrained persons with disabilities or young people. These groups of people are frequently not able to drive or cannot afford reliable transportation. Service occupations, which employ over 20 percent of people in the county, encompass such jobs.

Additionally, it is important to remember that different businesses have different transportation requirements. For example, retail businesses in villages or cities may value on-street parking and pedestrian accommodations more than service businesses elsewhere in the County. Businesses which are located along major transportation corridors will require off-street parking.

### Housing

Housing plays a strong role in transportation since either the origin or the destination of most trips is the home. When new residential developments are planned, it is important to consider how the new development will affect the transportation infrastructure, community accessibility, and the safety of the area. Affordable housing, including mixed income development, should be located in a manner that facilitates transportation access to services and employment. Consideration to both pedestrian and bicycling facilities should be given in all housing developments.

### Utilities and Community Facilities

Joint and/or coordinated planning of public and transportation facilities is essential. The location of schools is closely related to transportation. Ideally, primary and secondary schools should have safe pedestrian and bicycle access. Trip distances should be minimized to reduce the need for school busing and automobile transportation to the school. Access to public transportation can also help minimize transportation costs. Colleges and universities can also benefit greatly by having public transit available by reducing the need for parking space and by making the campus more accessible to a broader range of students including local, low-income, and disabled students.

Similar to schools, it is important that government buildings as well as human services be located with access to public transportation. Coordinating transportation planning with sewer service area planning helps minimize the overall cost of providing infrastructure.

### Agriculture Resources

The transportation system provides access and mobility for rural residents and the farming community. Farmers utilize the transportation system to both transport goods to market and to provide mobility between their various farming operations. State and county highways

throughout Waushara County provide farmers in the county access to both local and regional markets. When considering possible highway expansion projects, the impact on existing farming operations, especially as it relates to the creation of split parcels of agricultural land, must be considered. Access to these parcels may require unsafe highway crossings by farm equipment, or ultimately the loss of use of this land for agricultural purposes.

### Natural Resources

Transportation decisions can both positively and negatively impact the environmental quality of the area. Development and subsequent transportation improvements on state and county highway corridors or other potential projects may impact the area's natural resources (wetland areas and forestland). Loss of wetlands, which act as a natural buffer to filter nutrients and other pollutants, can be harmful to the wildlife habitat, including endangered species, and groundwater recharge. Finally, sprawl leads to longer travel times, which could result in increased air quality issues due to automobile emissions.

### Cultural Resources

Early Native American habitation, the geological landscape, and the area's historic buildings are significant to the local history. It is imperative that as growth occurs and transportation projects are proposed, sensitivity be given to both the identified resources and to the areas where other historic and cultural resources may exist. Since the identity and integrity of the community depends on the preservation of these unique features, the impact from expanded transportation corridors and new land development must be kept to a minimum. Consideration should also be given to the impact of future transportation projects on the cultural identity of the historic downtown areas.

### Land Use

Transportation, as with other planning elements, has a strong connection to land use. While transportation's primary purpose is to serve land use, land use patterns are dependent upon the condition and effectiveness of the transportation system. Expanded arterials, such as US 10, spur development by attracting development in proximity to new interchanges. Secondly, the traffic may be relocated if county highways or local roads are bisected or re-routed. Existing businesses may be negatively impacted as the former traffic flows for economic survival.

The efficient movement of vehicular traffic provides a quicker connection from one place to another. The expansion of STH 21 from two lanes to four lanes may reduce travel times from the Fox Cities to Waushara County and other areas. However, the increased accessibility may create additional development pressure as people are able to move further from urban centers without significantly increasing travel time to work and shopping.

### Intergovernmental Cooperation

Transportation systems go beyond municipal boundaries. Regional development patterns and municipal land use policies affect the transportation network. This network must efficiently move people and goods from one place to another. The transportation system is made up of local roads, collector and arterials, none of which stop at municipal borders but continue from

one community to another. An efficient transportation system can not be dependent on the decisions of one community but instead upon the input and cooperation of many different entities working together. For instance the possible expansion of STH 21 would affect many jurisdictions throughout the County. Each of these jurisdictions, along with the State of Wisconsin, would have input into the expansion of these transportation corridors. The resulting expansion will not only impact the local jurisdictions that it passes through, but could also impact the economics of the state as goods and people are more quickly and efficiently transported.

## POLICIES AND PROGRAMS

### State, Regional, County, and Local Policies

#### *State of Wisconsin*

**Wisconsin State Highway Plan 2020.** Wisconsin's State Trunk Highway system, consisting of approximately 11,800 miles of roads, is aging and deteriorating at the same time traffic congestion is increasing. In response to this critical issue, WisDOT, in partnership with its stakeholders, has developed the *Wisconsin State Highway Plan 2020,* a 21-year strategic plan that considers the highway system's current condition, analyzes future uses, assesses financial constraints, and outlines strategies to address its preservation, traffic movement and safety needs.[17] The plan is updated periodically to reflect changing transportation technologies, travel demand, and economic conditions in Wisconsin.

According to the Wisconsin State Highway Plan 2020, STH 21 from Oshkosh to I-39/U.S. 51 has been identified as a potential major project. Potential projects are subject to environmental analysis and legislative approval; they will be re-evaluated in future state transportation plans.

This plan also stressed the need to develop a safe inter-modal transportation system which can accommodate alternate forms of transportation, including designating specific state and county highways capable of safely accommodating bicycle transportation. Specific accommodations recommended in the plan include the use of designated bicycle lanes in urban areas, widening traffic lanes to allow for bicycle travel, and paving shoulders to allow for increased bicycle use.

**Connections 2030 Long Range Multimodal Transportation Plan – *Draft*.** A draft of the Connections 2030 Long Range Multimodal Transportation Plan was released in the fall of 2008. The plan address all forms of transportation; integrates transportation modes; and identifies policies and implementation priorities to aid transportation decision makers when evaluating program and project priorities over the next 20 years. The plan is organized around transportation themes rather than modes. The seven themes are to (1) Maintain Wisconsin's transportation system; (2) Promote transportation safety; (3) Foster Wisconsin's economic growth; (4) Provide mobility and transportation choice; (5) Promote transportation efficiencies; (6) Preserve Wisconsin's quality of life; and (7) Promote transportation security. Corridor management will be one of the main tools that WisDOT will use to achieve the plans goals. Two corridors are found in Waushara County: the Cranberry Country Corridor and the Wisconsin

[17] WisDOT. 1999. *Wisconsin State Highway Plan 2020*.

River Corridor. The Cranberry Country Corridor links the Fox Valley and I-94 to locations west in southern Minnesota, South Dakota and beyond. The corridor also serves the Wisconsin River flowage, Waushara County and Winnebago County tourism/recreation areas. The Wisconsin River Corridor is a critical tourist corridor that connects the population centers in Illinois and southern Wisconsin to major recreation areas on the north. Neither corridor passes through the Town of Mount Morris.

**Wisconsin State Bicycle Transportation Plan 2020.** The *Wisconsin State Bicycle Transportation Plan (WSBTP) 2020* specifically addresses the future needs of bicycle transportation. Two primary goals exist in the plan: to double the number of bicycle trips made by 2010 and to reduce the number of motor vehicle-bicycle crashes by 10 percent by 2010. To achieve these goals, objectives for engineering, education, enforcement and encouragement were identified. These included not only the need for the construction of an expanded network of transportation facilities that allows for safe bicycle travel, but also for the promotion of education to advance vehicle driver awareness of bicyclists (drivers licensing and bicycle safety courses). Finally, tips to promote the utility and ease of bicycle transportation were identified as well as the mandate to increase the enforcement of reckless driving behavior by motorists and bicyclists alike.

The *WSBTP* provides suggestions for both intercity (rural) and urban/suburban bicycle facilities. For the purposes of the *WSBTP*, urban areas were defined as villages or cities with populations of 5,000 persons or greater. Providing paved shoulders for bicycle accommodations along rural highways and the widths of these shoulders are determined by ADT, percentage of trucks, and curves and hills (see Wisconsin Rural Bicycle Planning Guide, Appendix A, Road Evaluation Method).

**Wisconsin State Airport System Plan 2020.** The *Wisconsin State Airport System Plan 2020* provides a framework for the preservation and enhancement of a public-use airport system which will meet future aviation demands for the state. It provides an inventory of existing public-use airport facilities; and categorizes them according to their current services, projected use, and future scheduled maintenance and construction projects. Based on existing conditions and projected improvements that are listed within airport master or layout plans, forecasts are made for future airport classifications. No projected changes have been made in the status of Waushara County's airport classifications. Several improvements have been completed in recent years at the Wautoma Municipal Airport. These have included taxing and runway expansion; entrance repairs, hanger improvements, etc. The 5-year Airport Improvement Program[18] indicates that a number of projects are planned at the Wautoma and Wild Rose Airports. These include seal coating, constructing a terminal building, runway expansion, and a land acquisition at the Wautoma Municipal Airport. In admission site improvements are planned for the Wild Rose Idlewild Airport.

### *Regional*

**East Central Wisconsin Regional Planning Commission.** East Central Wisconsin Regional Planning Commission has adopted a regional smart growth plan. As part of this planning process, East Central adopted five core transportation goals:

[18] http://www.dot.wisconsin.gov/projects/state/docs/air-5yr-plan.pdf

- To act to help ensure that the negative effects of sprawl development on our regional transportation system are minimized by encouraging new development to locate where adequate services and facilities exist.

- To work with all levels of government and organizations throughout the region to pursue adequate funding for transportation projects and programs which meet short term and long term needs.

- To help ensure that the regional transportation network links economic centers and efficiently moves people and freight throughout the region.

- To help maintain and continue the balance between transportation and the environment through efficient and consistent transportation and land use planning.

- To help ensure that alternative modes of transportation to the automobile exist and mobility options for all are efficient.

In 2002, East Central prepared a *STH 21 Corridor Study* that examined the corridor from Oshkosh to the Town of Rushford in Winnebago County. While this study looked at only a small portion of STH 21, it did address the long term needs of the entire corridor. According to the study, "In the future it may be desirable to construct STH 21 as a four lane expressway to Interstate 90/94".

### *County*

**Zoning.** The *Waushara County Zoning Code* sets standards for access driveways and streets. Sec. 58.828. regulates access driveways (access permits, spacing standards, and number and width of driveways per land use) while Sec. 42-81 regulates street design within subdivisions.

The county zoning ordinance (Sec. 42-81) requires all roads within subdivisions to be built to certain standards. This is important to the continued success of the transportation network.

**Highway Department.** The Waushara County Highway Department provides maintenance on county highways found in the area. It also provides roadway and ditch maintenance for the towns within the county on a contract basis. The County does not have an officially adopted transportation plan or Capital Improvement plan. However, it is the policy of the County to evaluate the county road system in the spring of the year and set a specific roadway maintenance schedule for the coming year.

## Federal, State and Regional Programs

### *Federal Agencies*

**Surface Transportation Program – Rural (STP-Rural).** This program allocates federal SAFETEA-LU funds to complete a variety of improvements to rural local highways and roadways. To be eligible, two conditions must be met: the road must be located outside of an urban area and must be classified as at least a rural major collector. Project proposal

applications are accepted only in odd numbered years. More information can be found at http://www.dot.wisconsin.gov/localgov/highways/stp-rural.htm.

**Surface Transportation Program – Urban (STP-U).** This program allocates federal funds to complete a variety of improvements to federal-aid-eligible roads and streets in urban areas. More information can be found at http://www.dot.wisconsin.gov/localgov/highways/stp-urban.htm. Berlin is an urban area that qualifies for STP-Urban and a portion of this is located in Waushara County.

### *State of Wisconsin*

**General Transportation Aid.** Road maintenance is in part funded by disbursement of the State Transportation Fund. The largest portion comes from General Transportation Aids. The State provides an annual payment to each county and municipality, which augments the local government's cost for activities such as road construction, crack and pothole filling, snow removal, and other related transportation maintenance. Disbursements from the account are determined by the total mileage of local roads within the municipality or by a formula based on historic spending. This information must be reported annually. More information can be found at http://www.dot.wisconsin.gov/localgov/highways/gta.htm.

**Local Roads Improvement Program (LRIP).** This program provides funding to improve or replace seriously deteriorating county highways, town roads, and city or village streets. New roads are not eligible. LRIP funds pay up to 50% of total eligible costs while the remaining amount must be matched by the local government. The program has three basic programs: County Highway Improvement (CHIP); Town Road Improvement (TRIP); and Municipal Street Improvement (MSIP). Additional discretionary funds are available for high cost projects. More information can be found at http://www.dot.wisconsin.gov/localgov/highways/lrip.htm.

**Connecting Highway Aids (CHA).** The CHA program assists municipalities with costs associated with increased traffic and maintenance on roads that connect segments of the State Trunk Highway system. Over 120 municipalities receive quarterly payments on a per lane mile basis. There are no connecting highways currently located in Waushara County. More information can be found at http://www.dot.wisconsin.gov/localgov/highways/connecting.htm.

**Flood Damage Aids.** This program provides funds to assist local units of government to improve or replace roads or roadway structures that have sustained major damage from flooding. The program helps defray costs for damaged streets, highways, alleys, or bridges which are not associated with the State Trunk Highway System. More information can be found at http://www.dot.wisconsin.gov/localgov/highways/flood.htm.

**Rural and Small Urban Area Public Transportation Assistance Program.** This program allocates federal funds to local units of government to provide both capital and operating costs for public transit services which operate within rural areas. All municipalities with populations less than 50,000 are eligible. More information can be found at http://www.dot.wisconsin.gov/localgov/transit/ruralsmall.htm.

**Wisconsin Employment Transportation Assistance Program (WETAP).** This program is designed to provide transportation for low-income workers to jobs, training centers, and

childcare facilities through enhanced local transportation services. Funding is provided by a combination of federal, state, and local funds. This program provides a crucial link to allow low-income workers to remain in the workforce. More information can be found at http://www.dot.wisconsin.gov/localgov/transit/wetap.htm.

**Local Transportation Enhancement Program (TE).** This program provides funds that increase multi-modal transportation within a region while enhancing the community and the environment. Eligible projects include multi-use recreational trails, landscaping, or the pre-servation of historic transportation structures. Funds cover up to 80% of the total eligible project costs. More information can be found at http://www.dot.wisconsin.gov/business/econdev/te.htm.

**The Bicycle and Pedestrian Facilities Program (BPFP).** This program funds projects that that construct or plan for bicycle or bicycle/pedestrian facilities. For information on this program, go to www.dot.wisconsin.gov/localgov/aid/bike-ped-facilities.htm.

**Transportation Economic Assistance Grant Program (TEA Grant).** This program provides a 50% state grant to local governments, private businesses, and consortiums for road, rail, harbor, and airport projects that are necessary to help attract employers to Wisconsin. These grants have a performance-based incentive and successful funding requires that businesses and industries created by the grant program retain and expand local economies in Wisconsin. More information can be found at http://www.dot.wisconsin.gov/business/econdev/tea.htm.

**County Elderly and Disabled Transportation Assistance Program.** County governments are eligible for funds to establish a transit program for elderly and disabled citizens. The program allows for flexibility in various transportation options to their clients. County governments must provide a 20% match in funds. More information can be found at http://www.dot.wisconsin.gov/localgov/transit/countyelderly.htm.

# CHAPTER 4: UTILITIES AND COMMUNITY FACILITIES

## INTRODUCTION

One responsibility of a community is to maintain a certain level of community services. To achieve it, they must continuously maintain, upgrade, and expand existing facilities in a cost-effective manner based on future growth projections and the desires of the community. The involvement of the community in the planning process illustrates the importance that the board places on maintaining a high level of public services and facilities. The following section provides an inventory of some of the services and facilities available in the community. The analysis of facilities is based on generalizations and predictions and is no substitute for detailed engineering or architectural studies, which should be completed before municipal funds are expended on specific projects. The size of community facilities along with the cost of providing services is directly related to land use, development patterns, and the existing and future densities of development. See Exhibit 8-1, Existing Land Use Map, and Exhibit 4-1 and 4-2, Utilities and Community Facilities, which illustrate the location of the various items discussed below.

## INVENTORY AND ANALYSIS

This section describes the existing utilities and community facilities within the Town of Mount Morris.

### Wastewater Collection and Treatment

***The Silver Lake Sanitary District boundary extends into the Town of Mt. Morris along the north side of Irogami (Fish) Lake.*** This boundary runs along the centerline of Chicago Road from the midpoint of the southern border of section 32 to STH 152 in section 31, then west along STH 152 to the town line. ***A low-pressure sanitary sewer system currently serves the properties on the north side of Irogami Lake on the south side Chicago Road (along the lake only) and Oakwood Drive.*** The current sewer service area within the Town includes only the properties on the north side of the lake. In addition all of sections 31, 32 and 33 and the west ¼ of section 34 are within the Wautoma – Silver Lake planning area boundary.

***The remaining properties utilize private on-site wastewater treatment systems (POWTS).*** Typically, individual systems are designed for each household or business based on the site's soil characteristics and capabilities. However, in some cases, a community, or 'cluster' system, may be used to serve more than one household. In rare cases, some existing development may have only a privy or no system at all. On-site systems, depending on the type and maintenance frequency, can function for 15 to 30 years and can cost-effectively treat wastes in rural areas not served by public sewers.

Beginning in 2000, Waushara County began an inspection program for POWTS. Newer POWTS built since 2000 are inspected every three years. Additional systems are included in the inspection program as they are replaced, or if there has been an improvement of over 25% of existing buildings and/or structures. Waushara County does not allow holding tanks systems for new construction, although they are an option for replacement situations. The Comm 83

rules do allow the use of holding tanks for new construction, however, individual counties and municipalities can continue to enforce such a ban at their discretion. The allowance of private on-site treatment systems will certainly be needed to accommodate new and existing development within the rural portions of the planning area.

As of October of 2008 the State of Wisconsin has created new requirements that will greatly affect POWTS. This change requires that by 2011 all counties in the state have a complete inventory of every POWTS in their area. By 2013 all POWTS will need to be part of the same inspection program that POWTS built since 2000 are a part of.

## Stormwater Management

Stormwater runoff and management have recently gained more attention as an environmental concern due to flooding and surface water quality issues. When the impacts of stormwater management are considered from a regional perspective, the potential for damage is tremendous. Although an individual development may not seem to have a significant impact on the natural drainage system, the cumulative impacts of development and urbanization can influence natural system functions. According to studies by the Center for Watershed Protection, as little as 10% impervious cover (concrete, asphalt, buildings, etc.) can negatively impact fish habitat. Moreover, if 25% of an area is impervious, the natural functions of a watershed become overloaded and stream quality can become permanently degraded.[1]

### *Drainage Districts*

The Waushara County Drainage Board administers and oversees the drainage of agricultural lands. It regulates various land practices used to remove excess water from farmlands and raises issues regarding the impacts of scattered rural development and the cumulative impacts on water quality flowing to and through their legal drains. In addition, county drainage boards are authorized to assess costs to a landowner for any adverse impacts on downstream water quality that can be directly attributed to that landowner. Landowners must receive drainage board approval before undertaking any action which could potentially affect a drainage system.

Drainage districts usually require a 20 foot vegetated strip on both sides of any ditch, which is to be used as a maintenance corridor, or any applicable stream within the watershed. Row cropping is prohibited within this corridor. These requirements can be coordinated with soil and water conservation plans required under the Farmland Preservation program[2].

***Eight drainage districts have been established within Waushara County. The only active district is the Marion-Warren district.***

### *Stormwater Systems*

Typically, curb and gutter stormwater systems are located in urbanized areas. ***Due to the rural nature of the town, curb and gutter is limited. A series of open ditches and culverts collects stormwater in the Town of Mount Morris.*** The ditches discharge water into local streams and rivers at various points throughout the area.

2 *Guide to Community Planning in Wisconsin*. 1999. Ohm, B.W.

### *Surface Water Quality Monitoring and Prevention*

Several different methods can be used to control and reduce the amount of stormwater runoff into local waterways. These methods can be implemented at a localized, town-wide, or regional level.

**Watershed Planning.** A watershed is an interconnected area of land draining from surrounding ridge tops to a common point such as a lake or stream confluence with a neighboring watershed.[3] This approach allows stakeholders on an individual water body to collectively focus their interests on improving the water quality in one area.

**Land Conservation Techniques.** Land conservation techniques are used to provide physical barriers and improvements and may include legislative actions to change the physical environment and reduce current levels of runoff. These techniques can include cluster or conservation subdivisions, setbacks, buffers, and land acquisition.

**Aquatic Buffers.** An aquatic buffer is an area along a shoreline, wetland, or stream where development is restricted or prohibited.[4] Natural vegetation is highly encouraged in the buffer area. If properly designed, buffers can physically protect waterways from future disturbance or encroachment. Furthermore, buffers can protect surface water quality by removing nutrients and silt from stormwater runoff.

**Site Design Techniques.** Site design techniques can be applied to all developments. Every development should incorporate three main goals: reduce the amount of impervious cover, increase the amount of lands set aside for conservation, and utilize pervious areas for more effective stormwater treatment.[5] Techniques that can be used to achieve these goals include reduction in lot sizes, building narrower streets, planting rain gardens, creating bioretention ponds, etc.

**Stormwater Best Management Practices (BMPs).** Best Management Practices (BMPs) is a general term used to describe a broad range of structural controls that may be utilized by agricultural, residential, and commercial developments to control and reduce the amount of erosion caused by stormwater.[2] These practices may be used to reduce pollutant loads, maintain groundwater recharge areas, protect stream quality, and limit development within the 100-year floodplain.

### Water Supply

***The Town of Mount Morris is served by private wells.*** As such, groundwater is the source of drinking water within the Town. As with many other locations in Wisconsin, a high concentration of minerals in the soil substrate creates "hard" water. Iron, one mineral which contributes to hardness, is found at extremely high levels.[6] (See the Agricultural, Natural and Cultural Resource Chapter for more information.)

## Solid Waste and Recycling

Waushara County currently subsidizes waste management within the county. ***The County operates nine waste collection sites and contracts with Waste Management of Wisconsin, Inc. and Onyx Waste Services to haul waste and recyclables***, respectively that are collected at the sites. All non-recyclable wastes are hauled to Valley Trail Landfill in Berlin, Wisconsin. Wastes generated by commercial establishments are not accepted at the sites. Most commercial businesses and some rural residents also have curbside pickup. It is the policy of Waushara County to pay tipping charges for municipal, commercial, and rural residents that choose to have curbside pickup. The county also provides partial compensation for municipalities (cities and villages) to help them finance the hauling portion of waste disposal. The County does not pay tipping charges for foundry sand, demolition materials, rolloff containers, or compactors. The drop-off sites are open on Wednesdays from 12:00 PM to 4:00 PM and Saturdays from 10:00 AM to 4:00 PM year round; and Sundays from 12:00 PM to 3:00 PM during the months of June, July and August.[7]

***Residents of the Town of Mount Morris are able to utilize any drop-off site within the county, but they most likely utilize the Wautoma site***. Located in the Town of Wautoma on 17th Drive, the site is the largest in the county. Waushara County maintains a yearly lease with the village to use this site, which is manned by two county employees.

***All waste management sites in Waushara County accept recyclable materials.*** Recyclables are sent to Paper Valley Recycling in Menasha (paper) and Resource Management in Chicago (co-mingled). Waste oil is subcontracted by Superior Services to Jacobus in Madison. Iron and tin collected by Superior Services is subcontracted to Fox Valley Metal in Oshkosh. Subsidized by the County, residents receive no payment for these materials. Materials that are collected include: glass, tin, aluminum, plastic, newsprint, cardboard, magazines, office paper, yard waste, scrap iron, waste oil, batteries, and tires.

Waushara County currently works with Waupaca County to provide a disposal option for household hazardous waste. County residents bring their household hazardous waste to a Waupaca County Processing and Transfer Facility located in Manawa. This program runs from May through October with regular hours of operation. Residents pay a fee for disposing of these hazardous items, but Waushara County helps to reduce costs by contributing grant money towards the program.

## Electricity

***Adams-Columbia Electric Co-op and Alliant-Wisconsin Power & Light provides electric power to the area*** (See Exhibit 4-1).[8] Adams-Colombia Electric Cooperative is a rural electric distribution cooperative serving approximately 36,156 member/customer in parts of 12 central Wisconsin counties[9]. Alliant Energy is an energy-services provider with subsidiaries serving approximately one million electric and over 400,000 natural gas customers. Wisconsin

[7] Schuman, S. 2005. Personal Communication. Waushara County Parks, Recreation, and Solid Waste Department. Director.

[8] Waushara County 2005, Utility Data by WPS

[9] Adams-Colombia Electric Cooperative website: www.acecwi.com. Accessed November 20, 2008.

Power and Light, the company's Wisconsin utility subsidiary, serves 456,000 electric and 182,000 natural gas customers. Alliant Energy is headquartered in Madison, Wisconsin.[10]

### Natural Gas

***Wisconsin Gas Company provides natural gas service to the Town of Mount Morris and is a subsidiary of Wisconsin Energy Corporation*** (Exhibit 4-1).[11] The company serves approximately 583,300 gas customers in Wisconsin.[12]

### Power Generation Plants and Transmission Lines

***ANR Pineline Company (ANR) operates several gas pipelines within Waushara County.*** It operates one of the largest interstate natural pipeline systems, delivering natural gas to both Canada and the United States. It maintains about 10.600 miles of pipeline.[13] A pipeline, owned by ANR, runs from the north to south through the southeastern portion of the Town of Mount Morris. ***Koch Pipeline Company LP operates a pipeline within the Town of Mt. Morris.*** Koch Pipeline Company, a subsidiary of Koch Industries, is based in Wichita Kansas. It owns or operates crude oil, refined petroleum products, chemical and natural gas liquids. A pipeline owned by Koch runs from the north to the south through the southern and western portion of the Town.

***There are no electric transmission lines in Mount Morris.***

### Telecommunications Facilities

***According to information obtained from Waushara County there are no towers located in the Town of Mount Morris.***[14] ***However, according to the Town, towers do exist.***

#### *Telephone*

***Century Tel, Century Midwest, and Century Kendall all provide service to the Town of Mount Morris.***[15] Century Midwest and Century Kendall are both subsidiaries of Century Tel. Century Tel is the nation's seven largest local exchange company whose focus is on geographically clustered markets in rural areas and small cities.[16]

The advancement of telecommunication technologies, such as cell phones, has greatly increased the need for towers to provide receiving and sending capabilities. The number of telecommunications towers in the United States currently exceeds 77,000; this number could double by 2010.[17] The federal government recognized this need with the passage of the

[17] Wind Turbines and Birds: Putting the Situation in Perspective in Wisconsin. 2004. Sagrillo, M.

Telecommunications Act of 1996. Currently, the Waushara County Zoning Ordinance regulates the placement of cell towers within the county.

### *Internet*

Due to the proliferation of internet service providers (ISP), area residents can also choose from several national and local ISPs. Century Tel supplies internet service to their customers. Charter Communications provides internet service to parts of Waushara County. The availability of high speed access may change as ISPs increase coverage areas or if state and federal regulations or involvement change.

## Cemeteries

***The Town is not responsible for maintaining any cemeteries. However there are two private cemeteries located within the Town of Mount Morris: Howes Corners Cemetery and the Mt. Morris Holden Lutheran Church Cemetery*** (Exhibit 4-2).

**Howes Corners Cemetery** is located at the corner of Beechnut and 24th avenues. **The Mt. Morris Holden Lutheran Church Cemetery** is located on STH 152 across the highway from the church. The church is more than 150 years old and graves within the cemetery date back to the Civil War era. There is still room for new grave sites.[18]

## Childcare Facilities

Public involvement at the state level in the role of childcare falls largely under the supervision of the Wisconsin Department of Workforce Development's Office of Childcare (OCC). One of the OCC's primary areas of responsibility is the oversight of the Wisconsin Shares program, which is a childcare subsidy program.

The Wisconsin Shares program is administered by local counties, tribes and Wisconsin Works (W-2) agencies. The program assists families whose incomes are less than 200% of poverty to pay for childcare services. Parents choose the type of care and share the cost through co-payment. In order to be eligible for reimbursement, childcare providers must be licensed by the State, certified by county or tribal government, or operated by a public school. Research indicates that public dollars play a large financial role in the provision of childcare in the state, and in both urban and rural counties. Table 4-1 identifies available information on the number of regulated childcare facilities in the area. These figures are for licensed childcare providers only. A license is required for those who provide care for four or more children under the age of 7 at any one time. [19]

ChildCare Resource & Referral, Inc. works with counties and the State in monitoring childcare provision and has reported that the highest demand for care is for full-time, first shift (6 AM to 6 PM) hours. ***The Mid-Wisconsin ChildCare Resource & Referral, Inc. and CAPSELL Services works with Waushara County.***

[18] Mount Morris Holden Lutheran Church, personal communication, 12/8/08.
[19] *Wisconsin State Statutes 48.65.*

***Residents of the Town of Mount Morris most likely use childcare facilities in Wautoma. These facilities have a combined capacity of 122 children.***

UMOS is a non-profit, community-based organization which provides housing and other services to underserved populations.[20] Within Waushara County, migrant workers utilize these programs. UMOS operates a housing complex, Head Start program, and childcare facilities in Berlin. The licensed facility provided childcare for 70 children in 2008.[21]

**Table 4-1. Childcare Facilities**

| Provider | Regulation Type | City | Capacity |

*Source: Mid-Wisconsin Child Care Resource & Referral, 2008*

According to the Mid-Wisconsin ChildCare Resource & Referral agency, a need exists in Waushara County for additional childcare, especially for children of non-traditional workers such as second shift. It should be noted that the available capacity versus number of children 12 years old and under may not be representative of the need, since not all children in this age category require licensed childcare. Some children come from families in which the primary caregiver is not employed outside of the home, while other people may seek childcare near

[20] UMOS. 2006. *Welcome to UMOS.* http://www.umos.org.
[21] Mid-Wisconsin Child Care Resource & Referral, 2008 .

their place of employment or utilize unlicensed facilities or family and friends for childcare needs.

### Elderly Services

**Waushara County Department of Aging** offers several programs to area senior citizens. In 2007, these programs provided almost 4,000 individuals with assistance.[22] ***The Waushara County Coordinated Transportation System offers rides to not only senior citizens but also to veterans, and human service clientele on Medical Assistance.*** Transportation is provided by either mini-bus or volunteers. While transportation for medical appointments is provided almost exclusively by volunteer drivers, the mini-bus offers rides for not only medical appointments but also for grocery shopping and other personal errands. This program has been successful and may need to expand to serve the increasing number of senior citizens.

***Meals along with activities and fellowship are provided to seniors at eight locations throughout Waushara County. The closest site is located at the Wild Rose Community Center, 500 Wisconsin Avenue in the Village of Wild Rose.*** All sites are open from Monday through Friday unless indicated otherwise. Participants must be age 60 or older, but a spouse and/or caregiver any age are welcome to participate as well. Besides Wild Rose, other locations include the Wautoma-Waushara Senior Center (W8220 Cottonville Avenue in the Town of Dakota), the Redgranite Civic Center (202 Pine River Street), the Plainfield Senior Center (114 W. Clark Street), the Hancock Community Building (420 Jefferson Street), the Coloma Community Center (155 Front Street; Monday, Wednesday, Thursday and Friday), and The House Next Door in Poy Sippi (W2306 Prospect Street; Tuesday and Thursday). Meals are served at the Saxeville Town Hall (W4022 Archer Avenue; Monday and Wednesday)[23]. Meals are also delivered to individual residences. Currently, the county provides this service to nearly 1,000 senior citizens[24].

***The Aging & Disability Resource Center of Green Lake, Marquette and Waushara Counties provides information and assistance on aging, long term care, disabilities, and other related topics.*** A grant written in 2007, and extended through 2010 has allowed the expansion of services and the development of this tri-county consortium[24].

A trained benefit specialist is available to help seniors and their families find information on public programs such as Social Security, Medicare, and other related programs. This individual not only provides guidance by thoroughly explaining all available options, but also assists seniors with completing all required paperwork for these programs. The benefit specialist offers flexible hours at meeting locations which include the office, local senior centers, and personal residences. Since this program is supervised by an attorney, legal help is available to seniors with an appeal process if they are denied claims or assistance.

According to the Aging and Disability Resource Center, transportation remains an issue within the county.

---

[22] Waushara County Department of Aging Services. 2007. *Waushara County Department of Aging Services Summary*.

[23] Communication with the Aging and Disability Resource Center, November 21, 2008.

[24] Waushara County Department of Aging Services 2007 Summary

The **Wautoma-Waushara Senior Center** is located at W8220 Cottonville Avenue in the Town of Dakota. The center serves as a meal site for the Waushara County Department of Aging meal program each weekday. ***The center offers a wide range of social and educational activities for seniors including bingo, card tournaments, crafts, and others.*** Several field trips are organized each year to Wisconsin casinos, museums, and other destinations.

### *Residential Care Facilities*

The Wisconsin Department of Health and Family Services (DHFS) regulates adult care facilities. Several types of residential services exist for the elderly. These include Residential Care Apartment Complexes (RCACs), Adult Family Homes (AFHs), Community Based Residential Facilities (CBRF), and adult day cares.

RCACs provide independent apartment living options for individuals in groups of five or more. Apartments must have a lockable entrance and exit; a kitchen with a stove (or microwave); and individual bathroom, sleeping, and living areas. Individuals can receive no more than 28 hours of supportive services (transportation, housekeeping, recreation), personal assistance (dressing, bathing, etc.), or nursing care per week. They are appropriate only for individuals who require in-depth health monitoring by health care professionals.[25]

AFHs are designed to provide care for up to four persons and allow the opportunity for residents to receive specialized care. AFHs can specialize in residents of advanced age or persons with dementia, Alzheimer's, or physical disabilities.[26]

In Wisconsin, CBRFs provide housing for five or more residents. The minimum age for CBRF residency is 18. CBRFs provide housing for both individuals who can live independently and for those who require care.[27]

An Adult Day Care Facility provides services for adults who need assistance with daily activities in a group setting. Adult day care may be provided in home, a specialized facility, or other community facility (i.e., churches). Unlike other elderly services, adult day care facilities provide services for only a portion of the day; these services are usually provided during normal business hours. ***There is an adult day care facility in Wautoma called Adult Day Services Living Environmental. Cooperative Care, based out of Wautoma and Redgranite, provides in-home personal and home care services to elderly and disabled residents.*** The profits from this member owned cooperative are divided up between all the members who worked in that year. Table 4-2 lists the number of adult care facilities that Town of Mount Morris citizens may choose to use and their corresponding capacities. Facilities for Waushara County are located in Wautoma and Redgranite.

---

[25] DHFS. 2006. *Residential Care Apartment Complexes (RCACs) – Introduction.* http://dhfs.wisconsin.gov/rl_dsl/RCACs/RCACintro.htm

[26] DHFS. 2006. *Adult Family Homes – Introduction. http://dhfs.wisconsin.gov/rl_DSL/AdultFamilyHomes/AFHintro.htm*

[27] DHFS. 2006. *Community Based Residential Facilities (CBRFs) – Introduction.* http://dhfs.wisconsin.gov/rl_dsl/CBRF/CBRFintro.htm.

**Table 4-2 Elderly Care Facilities**

| Facility | Waushara County | |
|---|---|---|
| | Number | Capacity |
| Residential Care Apartment Complexes (RCAC) | 3 | 93 |
| Adult Family Homes (AFH) | 5 | 19 |
| Community Based Residential Facilities (CBRF) | 8 | 106 |
| Adult Day Care Facilities (ADC) | 1 | 40 |
| Total | 17 | 258 |

Source: Wisconsin Department of Health and Family Services, 2008.

Although the elderly population is healthier and living longer than in the past, assistance will likely be needed at some point in their lives. The type of assistance preferred should be identified with input from potential users. ***The overall capacity for adult care facilities serving the planning area is 258 persons.*** By 2030, about 30 percent of the population in Waushara County is projected to be age 65 or older.[28] As the population ages, it can be assumed that a growing proportion of senior citizens may need additional facilities to meet their recreational, medical, and everyday necessities. In addition, more focus is being placed on allowing individuals to remain in their personal residences. Additional staff may be needed to provide care and assistance to senior citizens who wish to remain in their homes.

## Police Service

### *Waushara County Sheriff Department*

***The Waushara County Sheriffs Department provides around the clock law enforcement services to the Town of Mount Morris, as needed.*** The sheriff's department has two vehicles patrolling the entire county from 5:00 AM to 5:00 PM, while three patrol vehicles work in the county the remainder of the day. ***Response time in the Town of Mount Morris is between 5 and 10 minutes. New in 2008, the Sheriff's department provides boat patrol for all lakes within Waushara County.***[29]

***The Waushara County Sheriff's Office is located on Division Street in Wautoma. The Hancock and Poy Sippi fire departments serve as satellite headquarters each Saturday afternoon.*** This increases the officers' visibility and availability to county residents who do not live near the sheriff's office.[30] The department employs 25 full-time sworn officers. Other employees include 25 correction officers, eleven E911 dispatchers, one emergency management specialist, and two secretaries. The emergency management specialist coordinates the emergency disaster response programs for both natural and manmade

[28] Wisconsin Department of Administration, 2004.
[29] K. Moser, Town of Springwater Clerk, December 5, 2008.
[30] *Waushara County Sheriff Department Annual Report*, 2003. Waushara County Sheriff Department.

disasters. One police liaison officer is employed by the department; he serves as liaison officer for schools in Wautoma, Redgranite, and Wild Rose.

Several specialized units, including drug enforcement and canine units, are operated by the Waushara County Sheriff's Office. Cooperative agreements exist with other multi-jurisdictional drug units in East Central Wisconsin. Several employees have been trained in latent print examination (fingerprint analysis).[31] In 2000, the County instituted an enhanced county-wide 911 system. The County is now working with Green Lake County, Centurytel and other county agencies on a wireless 911 project.

A common method used to assess the level of service that is being provided locally is to compare the number of employees per 1,000 residents served with averages for other law enforcement agencies statewide. However, it should be noted that the number of employees per 1,000 residents served is related to a variety of factors including crime level, geographic coverage, size of agency, and budgetary issues.[32] As of October 31, 2006, for a police department serving a community of 25,000 to 49,999 residents, the state average was 1.74 sworn employees per 1,000 residents served. ***For a sheriff's office (includes most jail personnel), the state average was 1.77 sworn employees per 1,000 residents served. The Waushara County Sheriff's Office employs 1.1 officers per 1,000 population. This is below the state average.***

Plans exist to upgrade several facilities. In 2003, a joint effort to develop an interoperability plan was initiated between county and local jurisdictions. The plan includes improving radio coverage; ensuring communication with all other agencies; decreasing reliance on telephone cable; and upgrading to digital equipment by 2008. Additionally, all equipment upgrades identified in the 2007 Radio Improvement Project were purchased and installed.[33] Video cameras will also be added to patrol cars within the next 10 years. New cameras for crime scene investigations and specialized equipment for latent prints examination are also budgeted in future fiscal years.

The Waushara County Sheriff's Department maintains a TRIAD program to educate and raise senior and retired citizens' awareness of safety related issues. The TRIAD meets monthly and includes a different topic or issue at each meeting.

### *Correctional Facilities*

According to the Wisconsin Adult Jail Report 2003, total adult admissions to state jails increased by 30 percent from 2001 to 2003, while Waushara County jails have decreased by 20.1 percent in the same time period..[34]

The average daily population (ADP) or average number of inmates held each day during one year is based upon a combination of admissions and the average length of stay. Waushara County reported an ADP of 87 in 2003 which is a 42 percent decrease from 2001. Generally,

[31] Waushara County Sheriff's Department. 2000. Personal Communication
[32] Office of Justice Assistance Statistical Analysis Center. 2003. *Crimes and Arrests in Wisconsin.*
[33] Waushara County Sheriff's Department Annual Report, 2007.
[38] Office of Justice Assistance Statistical Analysis Center. 2003. *Crimes and Arrests in Wisconsin.*
[34] *Wisconsin Adult Jail Populations*, 2003. Office of Justice Assistance.

when the ADP reaches 80 percent of maximum capacity, the facility is considered to be overcrowded. Setting the standard below maximum capacity allows for flexibility in managing seasonal populations, weekend arrests, and other special situations. ***There are three correctional facilities in Waushara County; the Waushara Huber Facility, the Waushara County Jail and the Redgranite Correctional Institution.***

The **Waushara Huber Facility** is located in Wautoma. The facility is housed in the former county jail on Park Street and has a maximum capacity of 36 inmates. Inmate populations for the Huber facility fluctuate seasonally.

The **Waushara County Jail** is located in Wautoma. The current facility was opened in January 2000 and has a maximum capacity of 153 inmates. The jail employs 29 security staff and other employees. In 2002, the ADP of the facility was 135 inmates (88.2%).

The **Redgranite Correctional Institution** is located in the Village of Redgranite. This facility is situated north of downtown and west of CTH EE on an 89-acre parcel. This medium security facility was opened in January 2001. With recent expansions, the prison has a maximum capacity of 990 inmates. Currently, the facility is over capacity with 1,013 inmates.[35] The prison employs 182 security staff and 94 other employees.

### Fire Protection

***The Town of Mt. Morris is served by four different fire departments/districts (Exhibit 4-2). The Wautoma Area Fire District covers the southwest quarter of the Town; the Redgranite Area Fire Department covers the southeast quarter of the Town; the Wild Rose Area Fire District covers the northwest quarter of the Town; while the Saxeville/Springwater Volunteer Fire Department covers the northeast quarter of the Town.*** In compensation for fire protection services, the Town of Mt. Morris has a contract or agreement with the departments and pays a yearly fee or assessment.

The **Wautoma** fire station is located in the City of Wautoma on Fair Street. It has twelve garage doors, a meeting room, a kitchen, two offices, a storage room, two bathrooms and a radio room. The firehouse generally meets the needs of the department and there was no mention of plans for additions. The department operates thirteen trucks including one ladder truck, three pumper trucks, one rescue truck with medical and extraction equipment, two tanker trucks, three brush trucks, one portable pump unit, one personnel van and one reserve pumper. Currently the department has 35 volunteers with two thirds of them being qualified as first responders.

The **Redgranite** fire station is located in the Village of Redgranite on Bannerman Avenue and is also home to the Village police department. The building was built in the 2000's and has four stalls, two offices, a dispatch room and bathrooms. The department operates three pumper trucks, one tanker truck, one brush truck, one equipment truck and one rescue/equipment truck. There are currently 30 volunteers on the fire fighting roster plus two radio operators. This department supplies first responder service which makes up about two thirds of its total calls[36].

[35] *Offenders Under Control Report,* 2008. Wisconsin Department of Corrections.
[36] *Mount Morris Land Use Plan, Town of Mount Morris,* 2002. East Central WI Regional Planning Commission.

The **Wild Rose** fire station is located in the Village of Wild Rose on Main Street. The firehouse has four garage doors, an office, a meeting room and bathrooms. The firehouse generally meets the needs of the department and there was no mention of plans for additions. The department operates a total of nine trucks which include two pumpers, three tankers, two brush trucks, one rescue truck and one utility truck. The department is planning on replacing a tanker in a year or two. The department is officially a branch of the Village who contracts with four other jurisdictions to provide fire protection. There are currently thirty volunteers on the roster with over half of them qualified as EMT/first responders.[37]

The **Saxeville/Springwater** fire station is located in the unincorporated village of Saxeville on Portage Street next to the historic old town hall. It has four garage doors, a kitchen, meeting area, bathrooms and storage closets. It generally meets the needs of the department and there are immediate plans for facility improvements. The department operates one pumper truck, two tanker trucks, one brush truck, one equipment truck and one personnel truck. The equipment van was replaced with another pumper truck in April of 2000 and there are plans to purchase a new multi purpose truck to fight brush fires in a few years. There are currently thirty volunteers on the fire-fighting roster. This department does not supply first responder service but some of the volunteers have medical training.

The Insurance Service Office (ISO) of Wisconsin, through the use of the Fire Suppression Rating Schedule, evaluates the adequacy of fire protection within the state for municipal fire protection.[38] The schedule provides criteria to be used by insurance grading engineers in assessing the physical conditions of municipalities relative to fire hazards and rating municipalities' fire defenses. Ratings obtained under the schedule are widely used to establish base rates for fire insurance. While ISO does not presume to dictate the level of fire protection services that a municipality should provide, reports of evaluation results published by its Municipal Survey Office generally outline any serous deficiencies found through the evaluation. Over the years, these findings have come to be used as a guide to municipal officials planning improvements to local fire protection services.

The grading is obtained by ISO based upon its analysis of several components of fire protection, including fire department equipment, alarm systems, water supply systems, fire prevention programs, building construction, and the distance of potential hazard areas from the fire station. In rating a community, total deficiency points in the areas of evaluation are used to assign a numerical rating of 1 to 10, with a 1 representing the best protection and 10 representing an essentially unprotected community. Many towns and villages in the more rural areas typically have ratings of class 8 through 10 (Table 4-3). ***The four fire department/districts have and ISO rating of 9 within the Town of Mount Morris.***

[37] *Town of Springwater; Land Use Management Guide Plan,* 2003. East Central WI Regional Planning Commission.

*Source: Milestone Report #1; State of the Region, ECWRPC 2003*

The standards for fire station location utilized by the National Board of Underwriters are given in Table 4-4. These standards are based on the density of development in the station service area.[39] Since the towns constitute a relatively low-density rural area, a four to six mile service radius is the recommended standard.

**Table 4-4. Recommended Density/Distance Standards for Fire Protection**

| Land Use | Suggested Service Radius | |
|---|---|---|
| | Engine or Pumper Company | Ladder Company |
| Commercial/Industrial | .75 - 1.0 miles | 1.0 miles |
| Res. Med./High Density (<100' bet. Structures) | 2.0 miles | 3.0 miles |
| Res. Scattered (>100' bet. Structures) | 3.0 - 4.0 miles | 3.0 miles |
| Res. - Rural Low Density | 4.0 - 6.0 miles | - |

### Health Care Facilities/Emergency Medical Services

***There are no hospitals located within the Town of Mount Morris; however there are eight hospitals located within approximately 50 miles.*** The eight General Medical-Surgical hospitals include Wild Rose Community Memorial Hospital in Wild Rose, Adams County

[39] American Planning Association. 1988. 1988 Small Town Planning Handbook.

Memorial Hospital in Friendship, Berlin Memorial Hospital in Berlin, St. Michael's Hospital in Stevens Point, Divine Savior in Portage, Riverview Hospital Association in Wisconsin Rapids, Mercy Medical Center in Oshkosh and the Aurora Medical Center in Oshkosh. Table 4-5 indicates which hospitals are used by residents of the various communities as well as the approximate distance between the hospital and the municipality and general information about the area hospitals.

***Emergency medical services for the Town of Mount Morris are provided by the Waushara County EMS.*** The various fire districts and local fire departments within the county also have First Responders on staff that can assist with the basic and advanced medical emergencies. Depending on the location, First Responders are usually able to arrive at the emergency scene either ahead of the ambulance or at approximately the same time. The Saxeville/Springwater Volunteer Fire Department does not supply first responder service but some of the volunteers have medical training. The Wild Rose Area, Wautoma Area and Redgranite fire departments/districts employ EMT/First Responders.

**Libraries**

***Town of Mount Morris residents have access to a number of libraries within the county, but will most likely use the public libraries in Wild Rose, Redgranite or Wautoma***. The Wild Rose Public Library is located at 500 Division Street in the Village of Wild Rose, while the Redgranite Public Library is located at 135 W. Bannerman in the Village of Redgranite. Finally the Wautoma Public Library is located at 410 W. Main Street in City of Wautoma. Any town, city or village resident has access to the materials in any county-supported library within Waushara County. All libraries in Waushara County are members of the Winnefox Federated Library System. The federated library system is designed to provide expanded library services to more people without making additional large expenditures. The libraries receive the majority of their revenue from the local municipalities and county based on resident usage. Besides other services listed below, the libraries offer their patrons Internet service. Table 4-6 provides relevant information for the Public Libraries in Waushara County.

Service targets for libraries are based on quantitative standards contained in the Wisconsin Library Standards. Reported for each standard is the effort required to achieve basic, moderate, enhanced or excellent levels of service. These standards are based on the population served and vary for a community in regard to municipal population versus service population. For the Wild Rose, Redgranite and Wautoma public libraries (the most likely to be used by Town of Mount Morris residents), municipal and service population varies greatly (Table 4-6). Other standards that apply, besides what is listed in Table 4-7 are that a certified library director is paid to perform board-designated duties for no fewer than 25 hours per week and that the library supports the library director's continuing education. None of the libraries employ a certified library director. Additionally the operating budget for the Redgranite library is less than the minimum standards.

**Table 4-6. Public Library Statistical Data**

| | Library Type | Municipal Population 2007 | Additional Service Population | Total Service Population 2007 | Annual Hours Open | Total Staff | Library Materials Total |
|---|---|---|---|---|---|---|---|
| **Waushara** | | | | | | | |
| Coloma | Municipal Library | 471 | 1,276 | 1,747 | 1,716 | 1.60 | $9,013 |

*Source: Wisconsin Department of Public Instruction, 2007*

***The Wild Rose Public Library provides a moderate to enhanced level of service of all criteria listed above based on their municipal population. However, when the much larger service population is considered, the level of service falls for most criteria.*** In comparison, ***the Redgranite Public Library provides less than basic level of service for most criteria based on its municipal and service populations*** (Table 4-7). The Wautoma Public Library provides a lower service level for the number of volumes held in print for its municipal population. However, for other criteria, ***the Wautoma Public Library generally provides between an enhanced and excellent level of service. Service levels fall when the service population is considered.***

**Table 4-7. Library Service Levels**

| Criteria | Wild Rose | | Redgranite | | Wautoma | |
|---|---|---|---|---|---|---|
| | Municipal | Service Pop | Municipal | Service Pop | Municipal | Service Pop |
| Staff FTE | Excellent | Moderate | <Basic | <Basic | Enhanced | < Basic |
| Volumes Held (print) | Enhanced | < Basic | <Basic | Basic | Basic | < Basic |
| Periodical Titles Received | Moderate | <Basic | <Basic | <Basic | Moderate | Basic |
| Audio Recording Held | Excellent | Enhanced | <Basic | Basic | Excellent | Enhanced |
| Video Recordings Held | Enhanced | Excellent | Moderate | Enhanced | Excellent | Excellent |
| Hours Open per Week | Enhanced | Enhanced | <Basic | <Basic | Excellent | Moderate |
| Materials Expenditures | Enhanced | < Basic | <Basic | <Basic | Enhanced | < Basic |
| Collection Size (print, audio, video) | Enhanced | Basic | <Basic | Basic | Moderate | < Basic |

## Education

### *Primary and Secondary Education*

***The Town of Mt. Morris is served by two school districts; the Wild Rose School District and the Wautoma Area School District.***

### *Wild Rose School District*

The Wild Rose School District serves the northern half of the Town of Mount Morris. It operates a total of four schools: Wild Rose High School/Middle School (grades 9-12/6-8, Wild Rose), Wild Rose Elementary (pre-k thru 5, Wild Rose), and Pleasant View Elementary School (k-5, Pine River).[40] The district is comprised of 88.9 staff members, 734 students, and a pupil to teacher ratio of 13.1.[41] ***According to the district, a declining enrollment is being experienced at all levels. Therefore, it is anticipated that the schools will be able to continue to serve the enrollment of the district for the near future.*** However, it may be necessary to provided updates to the schools in the future based on technological advances.[42]

The Wild Rose High School and Middle School, along with the district offices, are located at 600 Park Avenue in Wild Rose. The school, home of the Wild Cats, sits on the site of the former three story school building, which was built in 1902 and housed all 12 grades. In the summer of 1969, the original school was razed. A referendum was approved by voters in 1996, and major renovations along with classroom space were completed at the school. Since 1996, no additions have been made to the school and none are currently planned. While separate classroom areas are provided for the middle and high school students, the students do share a common area for music, art, shop, and home economics. In addition to the shared specialty classroom areas, students also share a common gym, auditorium, administrative offices and athletic fields. Besides major renovations to the district high school and middle school, voters also approved the construction of the new grade school in 1996. The Wild Rose Elementary School is located at 825 Mt. Morris Street in Wild Rose.

[40] Wild Rose School District, 2006. Philosophy of Education. http://www.wildrose.k12.wi.us.
[41] Wisconsin Taxpayers Alliance. 2008. *School Facts 08.*
[42] Olson, C. 2005. Personal Communication. District Administrator. Wild Rose School District.

### *Wautoma Area School District*

The Wautoma Area School District serves the southern half of the Town of Mount Morris. The district has a total of 197.4 staff members, 1,486 students, and a pupil to teacher ratio of 13.0.[43] It operates three schools within the City of Wautoma and one elementary school in the Village of Redgranite. ***According to the district, enrollment is declining at all schools***; there are no additions or renovations to any of the schools planned at this time.[44] ***Therefore, due to declining enrollment and school capacities, it is anticipated that the schools will be able to continue to serve the district's anticipated enrollment for the foreseeable future.*** However, it may be necessary to provide updates at the schools in the future based on technological advances.

District administrative offices, built in the 1920's or 1930's, are located at 556 S. Cambridge Street in Wautoma. The district's bus garage was built around 1975 adjacent to the administrative offices. The Wautoma High School (grades 9 – 12), home of the Fighting Hornets, is located nearby at 514 S. Cambridge Street. Built in 1968, the school was remodeled in 1996 and 2002. In 1996, basic renovations were made to the McComb/Bruchs Performing Arts Center and a new library was constructed. The 2002 renovations included a new band room and main gym. Riverview Elementary School (pre-k – 3) was built in 1960 and is located at 525 S. Water Street in Wautoma. Additional classroom space was added in 1993 and in 2000 a new gym was constructed and general classroom renovations were made. Parkside School (grades 4 – 8) was guilt in 1993 and is located at 300 S. 16th Avenue on the west side of the city. No renovations have been made to this school. The Redgranite Elementary (k – 5) was built around 1956 an is located in the Village of Redgranite at 513 Bonnell Avenue.

### *Institutions of Higher Education*

***The Town of Mount Morris does not have any institutions of higher education.*** However, UW-Oshkosh (Oshkosh), UW-Stevens Point (Stevens Point), Lawrence University (Appleton), and Ripon College (Ripon) are within an hour's drive of the area. UW – Fox Valley (Menasha) is a two-year university offering freshman and sophomore level classes. Students can earn an associate's degree, or credits are transferable to all four-year UW system schools.

### *Vocational Technical Colleges*

The state is covered by 16 multi-county vocational technical and adult education districts which are organized on a regional basis and financed primarily by local property taxes.[45] These districts tend to follow school district boundaries rather than county lines. ***The Town of Mount Morris is part of the Fox Valley District.*** Curricula in the technical schools are usually geared toward an area's particular needs. Typically a student may choose from among a two-year highly technical associate degree program, a two-year vocational program, a one-year vocational program, and a short-term program.

[43] Wisconsin Taxpayers Alliance. 2008. *School Facts 08.*
[44] Personal conversation with the Wautoma Area School District, December 2, 2008.
[45] Wisconsin Department of Instruction. 2006. *Wisconsin Technical College Districts.* http://dpi.wi.gov/lbstat/techcmap.html.

### Community Theaters

***There is one community theater in the Town of Mount Morris.*** Several small theaters are located in City of Wautoma and the Town of Saxeville. These theaters schedule a diverse calendar of events throughout the year including musical concerts, talent shows, the Wautoma Queen Pageant, and theatrical performances. Audiences are attracted from throughout Waushara County and central Wisconsin. The general public can rent the facilities for private events.[46]

### Other Municipal Buildings

#### *Town Halls/Maintenance Garages*

***The Mount Morris town hall is located on STH 152 in the unincorporated village of Mount Morris.*** The hall has one large meeting room, a smaller conference room, restroom facilities and kitchen facilities. The Town also has a community center and about four acres of land located on the corner of CTH S and STH 152. The community center is a former school, which originally opened in 1957, closed in the late 1970s, and was acquired by the Town in 1991. This center has a furnished room which is used for town board and similar meetings, a recreation room, rest rooms, a gymnasium with basketball hoops and similar equipment, a storage room and a full kitchen. ***The property also includes a ball diamond and town garage, built in 1997.***

Town equipment includes two trucks for snow plowing, one truck for general utility, a tractor for mowing ditches and properties along with a simple lawnmower. The Town currently employs two people on an "as needed" basis for snow plowing, mowing and maintenance. Town board members have also helped with maintenance on occasion.

### Parks and Recreation

The Waushara County area is a popular recreational retreat. Waushara County's natural resources and outdoor recreational facilities provide a wide range of active and passive recreational activities. The abundance of natural lakes, forests, parks, recreational trails, and other amenities provide year-round recreational opportunities.

#### *Parks*

#### Waushara County

***Waushara County's park system is comprised of 15 sites containing a total of 761 acres.*** The county park system is considered to primarily provide active recreational opportunities. ***Mount Morris, Willow Creek and Big Hills Lake county park facilities are found within the Town of Mount Morris*** (Exhibit 4-2). Mount Morris, Willow Creek and Big Hills Lake and other county facilities found within the surrounding towns are described below.[49]

[46] McComb-Brush Performing Arts Center. 2006. http://www.mccombbruchspac.com.

### *Mt. Morris County Park*

Located on CTH W in the Town of Mount Morris, Mt. Morris County Park's 383 acres comprise over half the parkland in the county park system. Mt. Morris itself, the granite monadnock on which the park is located, is one of the most prominent features in Waushara County. An overlook area protected by safety fencing provides panoramic views 300 feet above the surrounding countryside. Most of the park's developed areas are located on flatter areas near the top of the hill. Facilities include a shelter house, tables and grills, three restroom buildings, play equipment, drinking water, two tennis courts, basketball goals, volleyball courts, a fenced ball diamond and concession stand. The ball diamond receives light use from Mount Morris area citizens. In 2002, the County purchased an additional 7.4 acres along CTH W and has begun a prairie restoration.

The northern slope of Mt. Morris is leased out as a ski hill complex, with tubing runs planned for 2007. The parking area at Nordic Mountain serves as a trailhead for 9.6 km. of county-maintained cross-country ski trails. About three-fourths of the trail is in Mt. Morris County Park while the remainder is in adjacent Willow Creek County Park and adjacent private lands. In 2005 the County entered into a lease arrangement with Nordic Mountain's new owner. ***According to the county park and recreation plan existing ski/hiking trails need continual improvement and maintenance. A second shelter is needed to accommodate picnickers and group activities.***

### *Willow Creek County Park*

This one-acre site provides walk-in access to Willow Creek, a class I trout stream. A small parking area off the entrance road into Nordic Mountain Ski Hill serves the park. A restroom building and picnic facilities are available. The park is on a loop of cross-country ski trail that originates at the Nordic Mountain parking lot. Much of this trail parallels the west bank of the stream, contrasting with the more wooded and hillier terrain of the trails in Mt. Morris County Park. ***According to the county park and recreation plan existing ski/hiking trails need continual improvement and maintenance. Interest in lighting the cross-county ski trails should be explored.***

### *Big Hills Lake County Park*

Located in the Town of Mt. Morris in the north central portion of Waushara County, Big Hills Lake County Park occupies a 5-acre parcel at the southwest end of Big Hills Lake. An undeveloped portion of the site is located away from the lake west of CTH WW. Facilities adjacent to the lake include a boat ramp, a paved parking area, a restroom building, a merry-go-round, and picnic equipment. Dusk-to-dawn lighting is available. Another park feature is a stormwater runoff detention buffer, which was done in cooperation with the Big Hills Lake Association, DNR, and the Land Conservation District (LCD). To ensure the future aesthetics of the park, the County has established an ongoing tree replacement program to replace deteriorated trees as they are removed. A boundary survey was conducted in 2001 and a boarding pier was installed in 2003. ***According to the county park and recreation plan routine maintenance needs to be continued.***

### *Kusel Lake County Park*

Kusel Lake is one of the county's most fully developed and heavily used parks. Waushara County owns 33 acres of the 92-acre park while the remaining 59 acres are leased from the Town of Springwater. A new lease agreement with the Town was entered into in 2001. Much of the park lies beneath the canopy of a mature pine plantation. Facilities near the water's edge include a boat launch, play equipment, picnic facilities, shelter building with restrooms, and parking. A portion of the shoreline is used for swimming. Parking capacity in this area is considered inadequate while erosion control along the shoreline remains an ongoing problem. Upland development includes an additional shelter/restroom, other picnic facilities, two tennis courts, basketball goals, play equipment, security lights, and a large parking area. Drinking water is available in both areas. The lower parking area serves as the trailhead for 8.8 km. of County-maintained ski trail, consisting of three loops through the park and adjacent Camp Luwisomo land. In 2003, the boat landing and tennis courts were resurfaced, the lower shelter was renovated, and its former hand pump was replaced with a bubbler and jug filler. In 2005, renovation of the park's upper shelter was begun. Another 2005 project was a property survey and boundary markings. The County continues to work with the U.S. Fish and Wildlife Service on an ongoing prairie restoration project.

### *Lake Alpine County Park*

This 17-acre county park lies about a quarter mile north of STH 21 midway between Wautoma and Redgranite in the central portion of the county. Recreational facilities include a shelter, restrooms, boat ramp, picnic facilities, a variety of play apparatus, drinking water and volleyball courts. A portion of the shoreline is used for swimming. Parking is considered generally adequate while the restrooms are considered inadequate. As part of this site, Waushara County also owns and is responsible for maintaining the dam and adjacent dikes. Improvements to the dam and dike riprapping were undertaken several years ago and further improvements were made in 2004. In 2003 a boundary survey was conducted and property lines marked. A natural shoreline restoration project is currently underway.

### *Flynn's Quarry County Recreational Property*

Flynn's Quarry is a 40-acre County-owned recreational property that surrounds a former granite quarry on CTH N near the Village of Lohrville. Near vertical rock walls surrounding a deep 3-acre quarry pond make the parcel one of the county's most unique recreational properties. Remnants of two former mine buildings are found on the site along with a number of abandoned artifacts, which are submerged on the floor of the quarry. While the steep rock walls and deep pond create some safety problems, cliff diving and scuba diving are unique recreational experiences traditionally enjoyed by visitors to the site. However, vandalism and after-hours use have created long-term problems for the County in managing this parcel. At the present time, Flynn's Quarry is leased to a dive shop for site management. Public use for scuba activities is arranged through Precision Sports Shop in Oshkosh.

### *Bannerman Trail*

Bannerman Trail supplies about seven miles of linear recreational opportunities for hikers, bicyclists, and snowmobilers. The trail utilizes the abandoned railroad right-of-way that once linked the quarries of Redgranite and Lohrville with the nation's rail system. The trail extends

from the south side of Bannerman Avenue in downtown Redgranite to STH 73 north of Neshkoro. Gates have been installed at road crossings to prevent unauthorized vehicles from gaining access to the trail. Waushara County has expressed an interest in working with the Village to pursue opportunities to provide off-street parking near the Redgranite trailhead.

### *Waushara County Shooting Range*

The County has a land use agreement with DNR to maintain a five-acre site on CTH C west of Wautoma as a public shooting range. Facilities include five shooting stations (three different distances) with rear bunkers. Lateral bunkers would be needed to bring the range up to safety standards. The entrance road from CTH C into the range requires routine grading. Although more restrictive hours have been set, the need for short-term staffing should be assessed on an annual basis.

### *Waushara County Fairgrounds*

There are about 35 acres of recreational land available at the Waushara County Fairgrounds in Wautoma. The fairgrounds include the typical complement of livestock, exhibition, and concession buildings. The grandstand, with its upgraded seating, fronts a ½-mile dirt track, which is used for harness racing. Other facilities available at the fairgrounds include picnic equipment, restrooms, shelter house, and drinking water. Among the more recent improvements are perimeter fencing, a new show ring, and a livestock building. Other improvements include an upgrade of the fairground's electrical system and lighting, extension of city water, and the extension of the midway. Restroom facilities, although updated, continue to remain inadequate for major events such as the county fair.

## Town of Mount Morris

***The Town of Mount Morris owns and maintains two local park facilities*** (Exhibit 4-2). A 3-acre town park is located between CTH G and Lake Morris. Park facilities include restrooms, picnic tables, a beach, boat landing and a pavilion with full electricity. The Town Board has discussed the possibility of additional remodeling at the pavilion.[36] The Town of Mount Morris also maintains a ball field by the community center.

### Recreational Needs

According to the National Park and Recreation Association, local communities should provide 10 acres of park and open space for every 1,000 residents.[47] Generally, smaller communities may require more acreage if all recreational needs are to be met. This is particularly the case when a community is expected to provide recreational opportunities not only for its residents, but also for residents of the surrounding area and a sizable number of visitors.

These standards suggest that Mount Morris' present need is 12 acres. This figure is expected to increase to 14 acres by 2030, as the population of the Town increases to 1,370 people. ***The Town of Mount Morris currently has 422 acres of park and recreational land, plus WDNR holdings. Based on these standards the Town has an adequate amount of park and recreational to meet these standards through the year 2030.***

[47] Recreation, Park, and Open Space Guidelines, 1990. National Park and Recreation Association.

### *Lakes*

***Many significant lakes, including Big Hills, Emerald, Mount Morris, Napowan (Funk) and Norwegian can be found within the area.***[48] The lakes provide a diversity of recreational opportunities including boating, swimming, and fishing. Many of the lakes within the area have public access. More information is presented below and in the Natural Resources element of this plan.

**Big Hills Lake** is located in section 2 and is approximately 135 acres in size with a maximum depth of 20 feet. This lake has bottom materials consisting almost entirely of sand mixed with some gravel and rubble. The fishery includes largemouth bass, perch, crappies, common sunfish and bluegills. Public access is available to this lake.

**Emerald Lake** is located in section 16 and is approximately 11 acres in size with a maximum depth of 14 feet. The shallow water zone consists almost entirely of sand with small amounts of gravel. The fishery includes largemouth bass, northern pike and assorted pan fish. Water access is available.

**Mount Morris Lake** is located in sections 16 and 17 and is approximately 163 acres in size with a maximum depth of 40 feet. This lake, consisting of four distinct basins, has bottom materials in the shallow water zone consisting of sand and marl. The fishery includes northern pike, largemouth bass, perch, crappies, common sunfish, pumpkinseed, bullheads and bluegills. Public access is available to this lake.

**Napowan (Funk) Lake** is located in section 2 and is approximately 51 acres in size with a maximum depth of 18 feet. This lake has a very steep basin, its bottom materials consist mostly of sand. The fishery includes northern pike, largemouth bass and various pan fish. Fluctuating water levels and algae present use problems. Public access is available to this lake.

***Norwegian Lake*** is located in section 5 and is approximately 94 acres in size with a maximum depth of 31 feet. The littoral bottom materials consist of extensive marl deposits with large sand areas along the west end. The fishery includes northern pike, largemouth bass and pan fish. There is no public access available to this lake.

Several other smaller and unnamed lakes and ponds are scattered throughout the Town of Mount Morris.

### Church and Youth Camps

Waushara County has long been a popular area for churches and other organizations to develop camps and retreats for members and their children. There are several of these facilities located throughout the county, collectively occupying nearly 2,000 acres of land. ***The following church and/or youth camp is located in the Town of Mount Morris: Camp Windego (Hills Lake).*** While the facilities they provide are generally not available to the public, the county benefits from goods and services they obtain from local vendors. In recent years, some of these camps have been sold off.[49]

[48] Wisconsin DNR. 1970. *Surface Water Resources of Waushara County.*
[49] ECWRPC. 2006. *Waushara County Outdoor Recreation Plan.*

### School and Town Forests

Three school forests and a town forest provide 819 acres of passive open space in Waushara County. These facilities include the Tri-County School Forest (230 acres), the Wild Rose School Forest (128 acres), the Coloma School Forest (40 acres) and the Town of Rose Forest (421 acres). ***There are no school or town forests located within the Town of Mount Morris.***

### Campgrounds

Sixteen private campgrounds are located throughout Waushara County. These facilities occupy an estimated 250 acres and provide an estimated 1,700 camping sites. Most of the campgrounds offer a diversity of recreational activities including swimming, boating, and fishing. ***The Mount Morris Camp & Conference Center is located in Mount Morris.*** This campground is located on Little Lake and has 20 sites.

### Snowmobile Trails

***About 285 miles of state-funded snowmobile trails are available in Waushara County.*** The public trail network and 50 miles of interconnected privately maintained club trails are readily accessible to all portions of the county and link up with trails of surrounding counties as part of a statewide system. Most of the public trails operate on wintertime easements which cross private property.[70] A notable exception is the previously discussed Bannerman Trail between Redgranite and Neshkoro. Snow permitting, the public snowmobile trail system has a major impact on county's economy during the winter months. ***The private trails within the area are maintained by the Wautoma Snow Drifters.***

### Sportsman's Clubs and Conservation Organizations

***Over a dozen parcels in the county are owned by a variety of sportsmen's and conservation groups.*** These sites total an estimated 800 acres and accommodate a variety of uses including trap and other shooting ranges; a snowmobile club; hunting and fishing grounds, areas set aside for preservation; and, in the case of private hunting clubs, hunting opportunities on a fee basis. Some of the hunting clubs also provide overnight accommodations. Depending on the activities each site provides and the user groups it serves, it can make a noticeable contribution to the local economy. Because some of these lands provide public recreational opportunities at times, they also help reduce use pressure on public land holdings.

### Golf Courses

There are three golf courses located in Waushara County. ***However, there are no golf courses within the Town of Mount Morris.*** The following golf courses are located within the County: the Waushara Country Club, Two Oaks North Golf Course and Marl Links. Waushara Country Club, located on STH 21 east of Wautoma, has recently been expanded to a 27-hole facility. Although the course is semi-private, guests are always welcome. Two Oaks North Golf Course is located near the City of Wautoma on CTH F in the Town of Marion. This 18-hole public course provides a golfing experience amid a scenic, peaceful, countryside setting. Marl Links, a par 3 course located near Marl Lake in the Town of Deerfield, is also available for public play. The courses offer challenging opportunities for golfers of all skill levels.

## Post Office

***The Town of Mt. Morris does not have a local post office, but there are post offices in nearby Redgranite, Wautoma and Wild Rose that provide service to the area.*** In general, Wild Rose provides rural free delivery to the northern half while Wautoma delivers to the southern half. Redgranite covers various houses in the northeast section of the Town as well.

## Key Findings

### *Wastewater Collection and Treatment*

- The Silver Lake Sanitary District boundary extends into the Town of Mt. Morris along the north side of Irogami (Fish) Lake.
- A low-pressure sanitary sewer system currently serves the properties on the north side of Irogami Lake on the south side Chicago Road (along the lake only) and Oakwood Drive.
- The remaining properties utilize private on-site wastewater treatment systems (POWTs).

### *Stormwater Management*

- Eight drainage districts have been established within Waushara County. The only active district is the Marion-Warren district.
- Due to the rural nature of the town, curb and gutter is limited.
- A series of open ditches and culverts collects stormwater in the Town of Mount Morris.

### *Water Supply*

- The Town of Mount Morris is served by private wells.

### *Solid Waste and Recycling*

- The County operates nine waste collection sites and contracts with Waste Management of Wisconsin, Inc. and Onyx Waste Services to haul waste and recyclables, respectively that are collected at the sites.
- Residents of the Town of Mount Morris are able to utilize any drop-off site within the county, but they most likely utilize the Wautoma site.
- All waste management sites in Waushara County accept recyclable materials.

### *Electricity*

- Adams-Columbia Electric Co-op and Alliant-Wisconsin Power & Light provides electric power to the Town of Mount Morris.

### *Natural Gas*

- Wisconsin Gas Company provides natural gas service to the Town of Mount Morris and is a subsidiary of Wisconsin Energy Corporation.

### *Power Generation Plants and Transmission Lines*

- ANR Pineline Company (ANR) operates several gas pipelines within Waushara County.
- Koch Pipeline Company LP operates a pipeline within the Town of Mt. Morris.
- There are no electric transmission lines in Mount Morris.

### *Telecommunications Facilities*

- According to information obtained from Waushara County, there are no towers located in the Town of Mount Morris.
- Century Tel, Century Midwest, and Century Kendall all provide service to the Town of Mount Morris.

### *Cemeteries*

- The Town is not responsible for maintaining any cemeteries. However there are two private cemeteries located within the Town of Mount Morris: Howes Corners Cemetery and the Mt. Morris Holden Lutheran Church Cemetery.

### *Childcare Facilities*

- The Mid-Wisconsin ChildCare Resource & Referral, Inc. and CAPSELL Services works with Waushara County.
- Residents of the Town of Mount Morris most likely use childcare facilities in Wautoma. These facilities have a combined capacity of 122 children.

### *Elderly Services*

- The Waushara County Coordinated Transportation System offers rides to not only senior citizens but also to veterans, and human service clientele on Medical Assistance.
- Meals along with activities and fellowship are provided to seniors at eight locations throughout Waushara County. The closest site is located at the Wild Rose Community Center, 500 Wisconsin Avenue in the Village of Wild Rose.
- The Aging & Disability Resource Center of Green Lake, Marquette and Waushara Counties provides information and assistance on aging, long term care, disabilities, and other related topics.
- The Wautoma-Waushara Senior Center (in the Town of Dakota) offers a wide range of social and educational activities for seniors including bingo, card tournaments, crafts, and others.
- There is an adult day care facility in Wautoma called Adult Day Services Living Environmental. Cooperative Care, based out of Wautoma and Redgranite, provides in-home personal and home care services to elderly and disabled residents.
- Facilities for Waushara County are located in Wautoma and Redgranite.
- The overall capacity for adult care facilities serving Waushara County is 258 persons.

### *Police Service*

- The Waushara County Sheriffs Department provides around the clock law enforcement services to the Town of Mount Morris, as needed.

- Response time in the Town of Mount Morris is between 5 and 10 minutes.
- New in 2008, the Sheriff's department provides boat patrol for all lakes within Waushara County.
- The Waushara County Sheriff's Office is located on Division Street in Wautoma.
- The Hancock and Poy Sippi fire departments serve as satellite headquarters each Saturday afternoon.
- For a sheriff's office (includes most jail personnel), the state average was 1.77 sworn employees per 1,000 residents served. The Waushara County Sheriff's Office employs 1.1 officers per 1,000 population. This is below the state average.
- There are three correction facilities in Waushara County: the Waushara Huber Facility, the Waushara County Jail, and the Redgranite Correctional Facility.

### *Fire Protection*

- The Town of Mount Morris is served by four different fire departments/districts.
- The Wautoma Area Fire District covers the southwest quarter of the Town.
- The Redgranite Area Fire Department covers the southeast quarter of the Town.
- The Wild Rose Area Fire District covers the northwest quarter of the Town.
- The Saxeville/Springwater Volunteer Fire Department covers the northeast quarter of the Town.
- The four fire department/districts have and ISO rating of 9 within the Town of Mount Morris.

### *Health Care Facilities/Emergency Medical Services*

- There are no hospitals located within the Town of Mount Morris; however there are eight hospitals located within approximately 50 miles.
- Emergency medical services for the Town of Mount Morris are provided by the Waushara County EMS.

### *Libraries*

- Town of Mount Morris residents have access to a number of libraries within the county, but will most likely use the public libraries in Wild Rose, Redgranite or Wautoma.
- The Wild Rose Public Library provides a moderate to enhanced level of service of all criteria listed above based on their municipal population. However, when the much larger service population is considered, the level of service falls for most criteria.
- The Redgranite Public Library provides less than basic level of service for most criteria based on its municipal and service populations.
- The Wautoma Public Library generally provides between an enhanced and excellent level of service. Service levels fall when the service population is considered.

### *Education*

- The Town of Mt. Morris is served by two school districts; the Wild Rose School District and the Wautoma Area School District.
- According to the Wild Rose School District, a declining enrollment is being experienced at all levels. Therefore, it is anticipated that the schools will be able to continue to serve the enrollment of the district for the near future.

- According to the Wautoma Area School District, enrollment is declining at all schools. Therefore, due to declining enrollment and school capacities, it is anticipated that the schools will be able to continue to serve the district's anticipated enrollment for the foreseeable future.
- The Town of Mount Morris does not have any institutions of higher education.
- The Town of Mount Morris is part of the Fox Valley District.

### *Community Theaters*

- There is one community theater in the Town of Mount Morris.

### *Other Municipal Buildings*

- The Mount Morris town hall is located on STH 152 in the unincorporated village of Mount Morris.
- The property also includes a ball diamond and town garage, built in 1997.

### *Parks and Recreation*

- Waushara County's park system is comprised of 15 sites containing a total of 761 acres.
- Mount Morris, Willow Creek and Big Hills Lake county park facilities are found within the Town of Mount Morris.
- According to the county park and recreation plan existing ski/hiking trails in the Mt. Morris County Park need continual improvement and maintenance. A second shelter is needed to accommodate picnickers and group activities.
- According to the county park and recreation plan existing ski/hiking trails in the Willow Creek County Park need continual improvement and maintenance. Interest in lighting the cross-county ski trails should be explored.
- According to the county park and recreation plan routine maintenance in Big Hills Lake County Park needs to be continued.
- The Town of Mount Morris owns and maintains two local park facilities.
- The Town of Mount Morris currently has 422 acres of park and recreational land, plus WDNR holdings. Based on these standards the Town has an adequate amount of park and recreational to meet these standards through the year 2030.
- Many significant lakes, including Big Hills, Emerald, Mount Morris, Napowan (Funk) and Norwegian can be found within the area.

### *Church and Youth Camps*

- The following church and/or youth camp is located in the Town of Mount Morris: Camp Windego (Hills Lake)..

### *School and Town Forests*

- There are no town or school forests located in the Town of Mount Morris.

### *Campgrounds*

- The Mount Morris Camp & Conference Center is located in Mount Morris.

### *Snowmobile Trails*

- About 285 miles of state-funded snowmobile trails are available in Waushara County.
- The private trails within the area are maintained by the Wautoma Snow Drifters.

### *Sportsman's Clubs and Conservation Organizations*

- Over a dozen parcels in the county are owned by a variety of sportsmen's and conservation groups.

### *Golf Courses*

- There are no golf courses within the Town of Mount Morris.

### *Post Office*

- The Town of Mt. Morris does not have a local post office, but there are post offices in nearby Redgranite, Wautoma and Wild Rose that provide service to the area.

## INTERRELATIONSHIPS WITH OTHER COMPREHENSIVE PLAN ELEMENTS

### Economic Development

Rising heath care costs directly impact a company's ability to compete in a global market. High quality, affordable, and accessible health care that is available to all residents is important to the vitality of the area. As the area's residents become older, the importance of healthcare will increase. Residents who live and work in healthy communities are more active, have fewer health problems, and are more productive. Studies have shown that productivity for working parents increase if they have access to safe, reliable, quality daycare for their children.

A vital, safe, clean and healthy environment is an economic draw for new industry and residents. It aids in the retention of existing residents and businesses. Parks or green space add to the local economy by maintaining or increasing property values; providing a place where local citizens can socialize, play sports or relax; and promoting healthy active lifestyles that encourage physical activity. In addition, local parks and recreational facilities draw visitors to an area. These visitors spend money at local restaurants, motels and other businesses.

A good educational system has the ability to respond to an ever-changing job market, to educate or retain residents, and to form partnerships between businesses and schools.

Citizens, businesses and industries need accessible, reliable gas and electric services. To enable economic growth and open up new markets and opportunities for diverse and innovative services, access to fast, reliable, cost-effective, and cutting edge telecommunications must be available.

## Housing

Preplanning can save municipalities' time and money. Infill of housing units or reuse of existing buildings in areas that already have the needed infrastructure in place, such as streets, sewer, water, emergency services and schools, saves taxpayers the cost of extending these services to new areas.

Housing developments should be provided with infrastructure that promotes healthy community lifestyles. It is important that housing, businesses and schools be interconnected with a network of sidewalks, green space and parks to encourage active lifestyles. Schools, parks, and libraries should be located in or near existing residential areas within walking distance for both children and adults. Parks and green space not only promote more active lifestyles but may increase housing values in the area.

However economically expedient or convenient it may seem at the time, housing should not be located in floodplains, areas of high groundwater, or other areas that are susceptible to flooding. Not only does this ill-conceived practice increase insurance costs, but it may also increase the cost to install basements and on-site sewage systems.

## Transportation

A well maintained, efficient and safe transportation network provides access for emergency service providers (police, fire and ambulance) and ensures a timely response. By incorporating pedestrian and bicycling facilities into the design of a transportation system, options other than the motor vehicle are made available and active healthy lifestyles that rely less on driving can be promoted.

The siting of a local park, recreational facility, school, library, solid waste or recycling facility may have an impact on the adjoining transportation network or facility. These facilities often result in additional vehicular and pedestrian traffic, increasing the likelihood that new roads, signalized intersections and pedestrian facilities will need to be built. The siting of facilities that attract birds and other wildlife, such as parks, solid waste or recycling centers, can adversely impact the safety of nearby transportation systems, including air traffic.

## Agricultural Resources

Preplanned development leads to the efficient use of public infrastructure and reduces the extent of sprawl, which contributes to the consumption of the rural countryside. Educating local officials and citizens about local land use decisions and their implications for farming is essential if farmland and the ability to grow or raise food are to be preserved.

## Natural Resources

The ability to accommodate growth while protecting the natural environment is essential if our quality of life is to be maintained or improved. The quality of the surface and groundwater resources is linked to the proper siting, installation and maintenance of individual on-site waste-water treatment systems. Improper treatment can result in the discharge of excessive human waste and bacteria into the groundwater system, which in turn can contaminate public and private water supplies. The cumulative impacts of development and well density can not only

affect the level of aquifers but also the rate at which the aquifer is recharged due to increased amounts of impervious surface. Additionally, improperly abandoned wells provide a direct link between the upper and lower aquifers and can be the cause of leakage between the two.

Parks, recreational areas, and other open space preserve and protect green areas for future generations to enjoy. They protect wildlife habitat within our communities, enhance water and air quality, lower heating and cooling costs, help control stormwater runoff, enhance property values, contribute to the vitality of a community, and encourage active lifestyles.

### Cultural Resources

Cultural and historical resources often help to determine and define a community's identity. Renovating or preserving an existing historic structure or building and reusing it not only enhances the area, but is often coveted by future tenants. Forming partnerships between public and private sectors to encourage development or redevelopment in already developed areas can make better use of existing public infrastructure and allow for ideas to become reality. Historic buildings can often be creatively converted to restaurants and other business and residential uses. Reuse of these buildings contributes to the tax roll as they are in close proximity to existing facilities; eliminates the need to expand infrastructure to new areas; cuts down on urban sprawl and the consumption of farm and open land; and saves taxpayers money. Cemeteries preserve the history of a community or area and are invaluable in the search for individual family history. In addition to their historical significance, they also contribute to the green space within a community.

### Land Use

Preplanned development leads to an efficient use of an area's resources, reduces urban sprawl, utilizes existing public infrastructure, and helps to eliminate land use conflicts. Concerns regarding the siting of solid waste and recycling facilities; gas, electric and telecommunications facilities; cemeteries; schools; and other public facilities are often raised by local citizens. However, education of local citizens and officials may result in a better general understanding of the issues and an acceptance of a solution that ultimately benefits everyone. Compact development in more urban areas reduces the cost to install public and private infrastructure and deliver public services (garbage pickup, sewer, water, emergency, electric, gas, and telecommunication, and elderly services, etc.).

Comm 83 regulations (affecting private on-site systems) have brought about state-level concerns regarding the promotion of "sprawl" development patterns and the ability to develop in or near sensitive areas. While the county has adequate groundwater supplies, well density in both urban and rural areas can impact the level of the aquifers. The rate at which they are recharged is influenced by the amount of impervious surface. Therefore when making land use decisions, it is imperative that the cumulative impacts of development on natural resources be examined carefully.

### Intergovernmental Cooperation

Forming partnerships between schools, park departments, libraries, non-profits and others benefits the community and saves the local taxpayer money. In some instances, if these

facilities are located near each other, additional cost savings and avoidance of duplicative services can be realized.

## POLICIES AND PROGRAMS

The provision of public and private utilities and community facilities is governed at federal, state, regional, and local levels. Given the breadth of topics discussed in this chapter, the policy background is provided for those areas most relevant to the comprehensive planning process.

### Regional, County and Local Policies

#### *Regional*

**East Central Wisconsin Regional Planning Commission.** East Central has adopted a regional smart growth plan. As part of this planning effort, East Central has adopted six Public and Community Facilities goals:

- Support opportunities for the sustainable and safe management of solid waste and recycling, collection, processing and disposal activities working in a cooperative, regional manner.
- Support efforts to provide electric, gas and telecommunication services to meet industrial and residential needs while being environmentally conscientious.
- Support the provision of efficient quality emergency and non-emergency services in a timely cost-effective manner within the region.
- Work cooperatively to protect and preserve current park, open space, recreational facilities, programs and plan for new facilities, while providing for and balancing the needs of various community groups with the needs of the general public in a financially responsible manner.
- Support a collaborative regional forum to create and implement a strategic policy framework for the continuum of care for the health and well being of the residents of the region.
- Support a variety of meaningful educational options and opportunities for all students.

#### *County*

**Waushara County Zoning Ordinance.** The Waushara County Zoning Ordinance regulates many of the public facilities referenced in this chapter. The following chapters contain relevant information.[50]

Chapter 30, Parks and Recreation, regulates land, structures and properties owned or leased by the County. This chapter specifies the laws associated with public usage of county parks. Topics discussed include, but are not limited to, park hours, permissible activities, safety standards, and police protection.

Chapter 38, Solid Waste, regulates solid waste and recycling activities in the county. Zoning ordinances are intended to preserve and protect environmental resources, to safeguard public health, and promote county-wide recycling initiatives. This section establishes hours for county

[50] Waushara County Zoning and Land Conservation Department. 2006. *Code of Ordinances: Waushara County, Wisconsin.*

waste collection facilities, delineates recycling guidelines, and discusses proper disposal techniques for solid waste.

Chapter 54, Utilities, regulates private on-site wastewater treatment systems within the unsewered portions of the County. This section regulates the proper siting, design, installation, inspection, and maintenance of private on-site wastewater systems (POWTS). The prerequisites necessary for the essential protection of the public health and the environment are the same everywhere. To a lesser extent, POWTS are also regulated by the Health and Sanitation Zoning Ordinance contained within Chapter 22. This ordinance declares that improper disposal of sewage and effluents are a public health hazard.

Chapter 54 is augmented by Comm 87 and Comm 83. Comm 87 requires that all new private on-site wastewater treatment systems be inspected at installation. Comm 83 specifies that all new POWTS must be inspected and maintained by a licensed certified professional. All new or replacement systems must be inspected every three years. POWTS should also be pumped out as mandated by their normal usage. Individual owners are now required to execute a verified affidavit and restrictive covenant running with the land which verifies that the POWTS serving the property is under such a maintenance program. Comm 83 requires that the service providers submit these forms on behalf of the POWTS owner within 30 days of the service. Records are kept on file with individual counties for a period of six years.

Chapter 58, Zoning, establishes the general zoning practices for unincorporated areas of Waushara County. Chapter 58 regulates cell tower heights (58-825), airport height limitations (58-236) and Wireless Communication Facilities (58-236). Cell towers are permitted as conditional uses according to the Waushara County zoning ordinances. Cell towers can be placed anywhere in the county with the exception of shoreland, wetland, or floodplain areas or the Wautoma airport height limitation zone. Although not specifically included in the Waushara County Zoning Codes, additional restrictions could be placed on communication towers.

**Waushara County Outdoor Recreation Plan.** The Waushara County Outdoor Recreation Plan discusses longstanding goals and objectives, inventories existing park and recreation needs and opportunities, and presents recommendations and an action program for addressing the system's growth and development. The current plan was adopted in April 2006.

**Waushara County Solid Waste Plan Update.** The Waushara County Solid Waste Plan Update 1999 inventories current waste management activities, projects future waste volumes, and discusses alternatives that the county may want to consider as they proceed into the future.[51]

### *Local*

The Town of Mount Morris adheres to Waushara County's Zoning Ordinance.

[51] Waushara County Parks, Recreation, and Solid Waste Department. 1999. *Solid Waste Plan Update.*

## Federal, State and Regional Programs

### *Federal Agencies*

### United States Environmental Protection Agency (USEPA)

**Water Pollution Control Act.** The Federal Water Pollution Control Act (1977), more commonly known as the Clean Water Act, established the basic structure for regulating discharges of pollutants into surface waters. Effluent standards for wastewater treatment plants and other industrial facilities were established by this landmark legislation. The legislation also provided grants to communities to assist with planning and construction of upgraded facilities. Today, increasing levels of growth and changing treatment standards have caused more recent expansions and improvements of these systems.

**National Pollutant Discharge Elimination System (NPDES) Storm Water Program.** The Clean Water Act also established the National Pollutant Discharge Elimination System (NPDES) Storm Water Program. The comprehensive two–phased program addresses the non-agricultural sources of stormwater discharges which adversely affect surface water quality. A NPDES permitting mechanism requires the implementation of controls designed to reduce the volume of stormwater runoff and the level of harmful pollutants in stormwater runoff.

**Safe Drinking Water Act (SDWA).** Drinking water standards are set by the USEPA. The Safe Drinking Water Act (SDWA) requires the USEPA to set primary standards, while individual public water systems must ensure that they are met. Drinking water standards apply to public water systems which supply at least 15 connections or 25 persons at least 60 days of a calendar year. Standards have been set for 90 chemical, microbiological, radiological, and physical contaminants. Non-enforceable guidelines are also set for secondary standards for contaminants that may cause cosmetic effects such as poor taste or odors.

### United States Department of Agriculture

**Rural Emergency Responders Initiative.** The Rural Emergency Responders Initiative can be utilized to strengthen the ability of rural communities to respond to local emergencies. Public bodies and non-profit organizations are eligible to receive funds. Eligible projects include the purchase of equipment, vehicles or buildings for the following types of projects: fire protection, rescue/ambulance, civil defense/early warning systems, communication systems, training facilities, and several other projects. More information can be found at http://www.rurdev.usda.gov/rhs/cf/Emerg_Responder/rural_emergency_responders_initi.htm.

**Water and Waste Grant and Loan Program.** The Water and Waste Grant and Loan Program offers grants and loans to communities with populations of up to 10,000. The funds are utilized to develop water and wastewater systems, including water supply, storage, waste disposal and storm drainage in rural areas. Eligible projects involve the original construction, modification or extension of existing projects. More information can be found at http://www.usda.gov/rus/water/programs.htm.

**Community Facilities Grant Program.** The Community Facilities Grant Program provides assistance to rural communities in the development of essential community facilities. Eligible applicants include public entities with populations less than 20,000. Grant funds may be used

to purchase equipment or construct, enlarge, or improve facilities associated with health care, public safety, or community and public services. More information can be found at http://www.rurdev.usda.gov/rhs/cf/brief_cp_grant.htm.

### Federal Emergency Management Administration (FEMA)

FEMA offers several annual grant awards to fire departments. Eligible project costs include equipment, supplies, training, emergency work (evacuations, shelters, etc.), and mobilization/ demobilization activities. All municipal jurisdictions with a population of less than 50,000 are eligible to receive funding. Recipients must provide a 10 percent match for all project costs. FEMA also operates disaster relief programs. For additional information see http://www.fema.gov.

### *Other Federal Agencies*

Federal regulation of telecommunications, radio, and television towers is currently under the auspices of the **Federal Communications Commission (FCC)**, the **Federal Aviation Administration (FAA)**, and the **Occupational Safety and Health Administration (OSHA)**. The FCC issues licenses for new telecommunication facilities by determining the overall need, coordinates frequencies, and regulates tower placement. Communication towers must be located at the most central point at the highest elevation available. The FAA regulates tower height, coloring, and lighting to ensure aircraft safety. OSHA regulates the occupational exposure to non-ionizing electromagnetic radiation emitted from radio, microwave, television, and radar facilities.

### *State Agencies and Associations*

**Public Service Commission (PSC).** Public utilities in Wisconsin are regulated by the PSC, an independent regulatory agency. The PSC sets utility rates and determines levels for adequate and safe service. More than 1,400 utilities are under the agency's jurisdiction. PSC approval must be obtained before instituting new rates, issuing stock or bonds, or undertaking major construction projects such as power plants, water wells, and transmission lines.

### Wisconsin Department of Agriculture, Trade, and Consumer Protection (DATCP)

Rural areas are governed by several non-point pollution prevention programs. Small-scale drains are prevalent throughout Waushara County. Administrative rules relating to agricultural runoff include NR-151, ATCP-50, NR-88, and ATCP-48. The first two regulations govern the total suspended solids (TSS) loadings; a 20 percent reduction is required by 2008 and 40 percent reduction by 2013. The latter two regulations pertain to the daily operations and functions of agricultural drainage districts. Primary responsibility for planning for, administering, and enforcing drainage district regulations resides with the county drainage board.

### Wisconsin Department of Commerce

COMM 83 is a health and safety code that sets standards for private on-site wastewater treatment system (POWTS). COMM 83 provides a technical and administrative framework for enforcing POWTS related issues. This legislation regulates traditional septic and mound

systems as well as delineates alternative options in which soil conditions and other factors limit the use of these traditional methods of private domestic wastewater treatment. The updated code prescribes specific effluent standards for POWTS.

**Community Development Block Grant – Public Facilities (CDBG – PF).** The Community Development Block Grant – Public Facilities (CDBG – PF) is a versatile tool that allows local units of government to finance public works projects. Projects must enhance the economic vitality of a community by undertaking public investment that contributes to overall community and economic development. Funds can be allocated to a wide array of infrastructure and public building projects, excluding buildings for the conduct of government. Typically, funded projects include improvements or construction of municipal sewer systems, wastewater treatment plants, municipal water systems, and other related projects. More information can be found at http://www.commerce.state.wi.us/CD/CD-bcf-cdbg-pf.html.

**Community Development Block Grant Public Facilities for Economic Development (CDBG – PFED).** The Community Development Block Grant Public Facilities for Economic Development (CDBG – PFED) helps underwrite municipal infrastructure development that retains or promotes business development by creating employment opportunities. Eligible projects include water and sewer systems and roads that are owned by a special purpose unit of government. All local governmental units with populations of less than 50,000 are eligible for funding. More information can be found at http://www.commerce.state.wi.us/CD/CD-bcf-cdbg-pfed.html.

**Wisconsin Fund.** The Wisconsin Fund provides grants to homeowners and small commercial businesses to repair, rehabilitate, or replace an existing private on-site wastewater treatment system (POWTS). Since 1978, the program has provided $77 million in assistance. Waushara County residents living in areas not serviced by municipal sewer systems are eligible to participate if the annual household income is less than $45,000. Small businesses with gross revenues totaling less than $362,700 are also eligible. Waushara County provides assistance to county residents to prepare grant applications. A portion of the funds is used to develop more environmentally friendly systems. More information can be found at http://www.commerce.state.wi.us/SB/SB-WisconsinFundProgram.html.

### Wisconsin Department of Natural Resources

Federal legislation such as the Clean Water Act has served as the impetus for state legislation. Areawide Water Quality Management under Section 208 and the Facility Planning Grant Program under Section 201 mandated the preparation of sewer service area plans for urban areas. These principles have been embodied into Chapters NR-121 and NR-110 of the Wisconsin State Statutes respectively. NR-121 specifies the standards and processes for initiating and continuous areawide wastewater treatment management planning. As provided by NR-121, the WNDR's role is to review and approve every sewer service area plan and its amendments, taking into account water quality impacts and cost-effectiveness. NR-110 regulates site-specific facility planning and sanitary sewer extensions. Decisions regarding the extension or expansion of wastewater collection facilities are made primarily at the local level.

**Wisconsin Solid Waste Management Program.** Begun in the 1970s, the Wisconsin Solid Waste Management Program regulates existing landfills and provides assistance to local governments. The program delineates all environmental regulations and standards that landfills

must adhere to including construction specifications, water monitoring requirements, and sanitary procedures. The program inventories and licenses all operating and proposed solid waste facilities. Periodic updates are performed to ensure that environmental protection standards are the most current based on data collection.

**Wisconsin Act 335.** In 1989, Wisconsin Act 335 was passed. This law governs the recycling programs within the state. Recycling programs for all commercial and residential entities were mandated under this legislation. The intent of the legislation is to divert recyclable material and various household hazardous wastes from landfills. Municipal governments are responsible for arranging residential programs, and the WDNR oversees and supports these efforts.

**NR-809.** Drinking water standards are also maintained at a state level. NR-809 regulates the design, construction, and proper operation of public water systems. The WDNR also assures that regulated contaminants are adequately monitored.

**Knowles-Nelson State Stewardship.** The Knowles-Nelson State Stewardship Fund is a land acquisition program for the State of Wisconsin. Created by the state legislature in 1989, $60 million dollars per year is utilized to purchase lands for parks and other recreational purposes. An important component of the program is the cooperation between the DNR and local governments and non-profit organizations. The program offers a 50 percent grant match to create parks, hiking trails, hunting grounds, and other facilities. The funds can also be utilized for facilities improvements such as road construction and capital acquisition projects (picnic equipment, playgrounds, etc.). More information can be found at http://dnr.wi.gov/org/caer/cfa/lr/stewardship/stewardship.html.

**Clean Water Fund Program (CWFP**). The Clean Water Fund Program (CWFP) offers loans and hardship grants to any town, village, city, county utility district, public inland lake protection & rehabilitation district, metropolitan sewerage district or federally recognized American Indian tribe or band to construct or modify municipal wastewater systems or construct urban storm water best management practices. More information can be found at http://dnr.wi.gov/org/caer/cfa/BUREAU/CleanWaterFund.pdf.

**Safe Drinking Water Loan Program (SDWLP).** The Safe Drinking Water Loan Program (SDWLP) offers loans to any city, village, town, county, sanitary district, public inland lake protection & rehabilitation district, or municipal water district to construct or modify public water systems to comply with public health protection objectives of the Safe Drinking Water Act. More information can be found at http://dnr.wi.gov/org/caer/cfa/EL/Section/drinkingwater.html.

**Wisconsin Pollutant Discharge Elimination System (WPEDS) Storm Water Program.** The NPDES program is administered by the WDNR through NR-216. The Wisconsin Pollutant Discharge Elimination System (WPEDS) Storm Water Program regulates stormwater discharge from construction sites, industrial facilities, and selected municipalities. Recent Phase II requirements will require six minimum control measures to be addressed by communities and other local entities: public education, public participation, illicit discharges, construction site pollutant control ($\geq$ 1 acre in size), post construction site stormwater management, and pollution prevention. More information can be found at http://dnr.wi.gov/org/water/permits/wpdes.htm.

**Well Compensation Program.** The Well Compensation Program provides grants to owners of contaminated private water supplies that serve a residence or are used for livestock. Contamination can not be bacterial in nature. Eligibility is determined based on annual family income. More information can be found at http://dnr.wi.gov/org/caer/cfa/Grants/wellcomp.html.

### Department of Public Instruction (DPI)

The Wisconsin Constitution as it was adopted in 1848 provided for the establishment of district schools that would be free to all children age 4 to 20. Subsequent laws allowed a property tax to be collected to fund school programs. Today, the Department of Public Education (DPI) oversees the operations of school systems and sets state standards for educational curricula, teacher certification standards, and other educational programs.

### Wisconsin Community Action Program Association (WISCAP)

**Rural Community Assistance Program (RCAP).** Rural Community Assistance Program (RCAP) offers training and technical assistance to small (under 10,000), rural, low income communities, sanitary districts, and isolated rural areas for problems related to water and wastewater system development. More information can be found at http://www.wiscap.org/rcap_what_is_rcap.htm.

### Board of Commissioners of Public Lands (BCPL)

**State Trust Fund Loan Program.** The State Trust Fund Loan Program offers loans to municipalities, lake districts, metropolitan sewerage districts and town sanitary districts for a wide variety of municipal purposes. More information can be found at http://bcpl.state.wi.us/.

### Wisconsin Rural Water Association

The Wisconsin Rural Water Association offers rural communities with populations of less than 10,000 grants, loans, and technical assistance for approved Rural Utility Service, Clean Water, Safe Drinking Water and Brownfield projects. More information can be found at http://www.wrwa.org.

## *Regional Agencies*

**East Central Wisconsin Regional Planning Commission (ECWRPC).** ECWRPC acts in an advisory and regulatory role for Sewer Service Area (SSA) Plans. ECWRPC has prepared detailed long range plans for 26 wastewater treatment plants to address growth and ensure water quality within the region. These plans were developed and administered by East Central through an agreement with the Wisconsin DNR. ECWRPC also acts in an advisory capacity to WDNR and provides recommendations on various plan updates, amendments, facilities plans, and sewer extensions.

# CHAPTER 5: AGRICULTURAL, NATURAL, AND CULTURAL RESOURCES

## INTRODUCTION

Agricultural, natural, and cultural resources give definition to a community and strongly affect its quality of life. For communities in Waushara County, a tapestry of working farms interwoven with large stands of woodlands and wetlands continue to dominate the rural landscape and help shape the area's identity and culture. The County's natural features such as topographic relief, lakes, streams, wetlands and soils also have a significant bearing on historic and contemporary land use, development patterns and contribute to a strong heritage of outdoor recreational pursuits. Fishing, swimming, hunting, and other outdoor activities are important quality of life past-times. The area's lakes and other scenic landscape features provide attractive home sites for many permanent and seasonal residents. At the same time, many of these environmental elements have limiting conditions that make them less than ideal for supporting particular types of activity or development. Understanding the relationship between these environmental characteristics and their physical suitability to accommodate specific types of activity or development is a key ingredient in planning a community's future land use.

## INVENTORY AND ANALYSIS

This chapter provides an inventory of existing agricultural, natural, and cultural resources. In addition, existing policies associated with these resources are discussed.

### Agricultural Resources

The Town of Mount Morris has had a farming history and tradition that have attracted residents to the area. Waushara County farmers produce a variety of feed and cash crops. Farming and other agricultural activities contribute significantly to the local economy. As with elsewhere in rural Wisconsin, these trends are changing as new developments encroach on productive farmland. The suburbanization trend is of great concern to both farmers and residents of the County. This section will look at important farmland classifications, agricultural land cover and farmland loses, and sales between 1990 and 1997. The UWEX Program on Agricultural Technology Studies is currently finalizing an updated *Wisconsin Town Land Use Databook; Town-Level Farming and Land Use Trends* from 2002 - 2007. This document is to be published in early 2009 and will provide a more comprehensive view of Waushara County's agricultural trends.

#### *Agricultural Land Cover*

Agricultural land cover includes row crops (corn, peas, potatoes, snap beans, soybeans and other row crops); forages (hay and hay/mix); and grassland (timothy, rye, pasture, idle, Conservation Reserve Program land, grass and volunteer grasses).[1] ***Agricultural land cover, which includes row crops, forages, and grassland, comprised over 45.7 percent of the total area of the Town of Mount Morris*** and 56 percent of the total area of Waushara County (Table 5-1).[1]

[1] Jackson-Smith, D., and E. Finnin. 2001. *Wisconsin County Agricultural Trends in the 1990s.*

**Table 5-1. Percent of Land Cover, 1991—1993**

| Community | Row Crop | Forages | Grassland | Total Farmland |
|---|---|---|---|---|
| T. Mount Morris | 16.8% | 3.7% | 25.2% | 45.7% |
| County | 26.6% | 9.0% | 20.4% | 56.0% |

*Source: UWEX Program on Agricultural Technology Studies, 1999*

### *Farmland Losses*

Farm and farmland losses are the result of economic pressures within agriculture as well as competition for agricultural lands from residential and recreational development. Within the state and nation there has been a steady decline in the number of farms and farmland acreage. Trends indicated that the average acreage per farm has decreased as the number of farms decreased from 1990 to 1997. However, this was not true for the Town for Mount Morris (314 and 307, respectively) and Waushara County (291 and 278, respectively) as a whole between 1990 and 1997.

***In 1997, an estimated 27 farms existed within the Town of Mount Morris. This represents a loss of one farm from 1990*** (Table 5-2). The percentage of the farms within the Town has decreased at a faster rate than the county as a whole. The Town of Mount Morris also has a lower percentage of farms based on land area than the county with 0.8 farms per square mile, compared to 1.2 farms per square mile for Waushara County.[2]

Dairy farms within the Town of Mount Morris and Waushara County have declined since 1990 (Table 5-2). ***In 1990, there were seven dairy farms in the Town and 232 in Waushara County; by 1997, the Town lost three dairy farms while the County lost 101 dairy farms.***

**Table 5-2. Trends in Farm Numbers, 1990 – 1997**

| | Estimated Farms | | | | Dairy Farms | | | |
|---|---|---|---|---|---|---|---|---|
| Community | 1990 | 1997 | % Change | Per sq. mile (1997) | 1990 | 1997 | % Change | Per sq. mile (1997) |
| T. Mount Morris | 28 | 27 | -3.60% | 0.8 | 7 | 4 | -42.90% | 0.1 |
| County | 709 | 710 | 0.10% | 1.2 | 232 | 131 | -43.50% | 0.2 |

*Source: UWEX Program on Agricultural Technology Studies, 1999*

The total number of farms and the amount of farmland have decreased in both the Town and County during this time frame. ***Between 1990 and 1997, 503 acres (5.7%) of farmland were lost in the Town of Mount Morris*** (Table 5-3). Waushara County experienced a smaller decline in the amount of farmland (4.4%) than the Town. The average farm size in Mount Morris and Waushara County in 1997 was 307 acres and 278 acres respectively. The

[2] UWEX Program on Agricultural Technology Statistics. 1999. *Wisconsin Land Use Databook: Town-level Farming and Land Use Trends 1990-1998, Waushara County.*

percent of town taxed as farmland represents the overall percentage of the Town that is considered agricultural by the local assessor.

**Table 5-3. Loss of Farm Acres, 1990 – 1997**

| Community | Farmland (Acres) 1990 | Farmland (Acres) 1997 | Percent Change | % of Town Taxed as Farmland (1997) |
|---|---|---|---|---|
| T. Mount Morris | 8,782 | 8,279 | -5.7% | 37.8% |
| County | 206,263 | 197,197 | -4.4% | 54.1% |

*Source: UWEX Program on Agricultural Technology Studies, 1999*

When agricultural land is sold in the State of Wisconsin, information is collected by the Wisconsin Department of Revenue regarding whether the land is going to remain in agricultural use. It should be noted that the Wisconsin Department of Revenue only collects information on larger parcels. In 1990 a "large" parcel was 20 acres in area and in 1997 a large parcel was increased to 35 acres in area. Between 1990 and 1997, 61 parcels encompassing 1,567 acres was sold in the Town of Mount Morris (Table 5-4). Approximately 73 percent of this land remained in agricultural use, while 27 percent was converted to other uses. Losses of agricultural lands in the Town of Mount Morris were higher than the average conversion rates throughout Waushara County; approximately 22 percent of land in the County sold was converted to non-agricultural uses.

**Table 5-4. Farmland Sales, 1990 – 1997**

| Community | No. Parcels Sold | Remain Agricultural | Converted to Other | Total Acres |
|---|---|---|---|---|
| T. Mount Morris | 61 | 1,567 | 581 | 2,148 |
| County | 974 | 33,881 | 9,558 | 43,439 |

*Source: UWEX Program on Agricultural Technology Studies, 1999*

### *Farmland Soils*

Waushara County's farmland contributes to the quality of life, provides an open agricultural landscape, and adds to the economy of the area. A classification system rating the suitability of a specific area based on soil type and condition was developed by the U.S. Department of Agriculture.[3] These classifications in order of importance are: 1.) prime farmland, 2.) unique farmland, 3.) farmlands of statewide importance, 4.) farmlands of local importance, and 5.) other lands. Table 5-5 and Exhibit 5-1 summarize the distribution of available farmland in these categories.

> **Prime farmland**, as defined by the U.S. Department of Agriculture is "the land that is best suited for food, feed, forage, fiber, and oilseed crops" when managed according to acceptable farming methods. These lands may be cultivated, pasture, woodland, or other land, however the land cannot be built-up, urbanized, or a water area. Prime

[3] USDA. 1993. *USDA Handbook 18: Soil Survey Manual*.

farmland produces the highest yields with minimal inputs of energy and economic resources with the least damage to the environment. Criteria used to determine prime farmland include an adequate and dependable supply of moisture from precipitation or irrigation, few or no rocks, high permeability, gently sloping terrain (0 to 6%) and a low erodiblity. Prime farmland is not frequently flooded during the growing season or saturated with water for long periods of time. Soils that have a seasonal high water table may qualify as prime farmland if this limitation is overcome by drainage measures.

**Unique farmland** is defined as land other than prime farmland that is used to produce specific high-value food or fiber crops. It has a moisture supply, either from stored precipitation or irrigation systems, and combines favorable factors of soil quality, growing season, temperature, humidity, drainage, elevation, aspect or other conditions. Examples of specialty crops that typically require a high management and investment level include apple orchards, lettuce, carrots, celery, and cauliflower.

**Farmlands of statewide importance** are lands in addition to prime and unique farmland that are important to the State of Wisconsin for crop production.

**Farmlands of local importance** are lands in addition to the previous three categories which are important to Waushara County for crop production.

**Other lands** are areas which have little value for producing crops.

According to the above criteria, the highest percentage of land within the Town of Mount Morris is considered unique farmland. Within the Town, 57.4 percent (12,973 acres) is classified as unique farmland. Of this total approximately 2,495 acres needs to be drained before the land can be utilized. Other lands are the second most abundant category of farmland (18.9%) with a total of 4,268 acres. ***Prime farmland accounts for 1,648 acres or 7.3 percent of the land in the Town of Mount Morris.*** Approximately 10 percent (2,299 acres) of land is considered local importance farmlands, while 3.4 percent (773 acres) of the land is classified as state importance farmlands (Table 5-5, Exhibit 5-1). The remaining 623 acres are classified as water.

**Table 5-5. Important Farmland Classes**

| | T. Mount Morris | |
|---|---|---|
| Farmland Class | Acres | Percent |
| Prime Farmland | 1,648 | 7.3% |
| Unique Farmland | 12,973 | 57.4% |
| State Importance | 773 | 3.4% |
| Local Importance | 2,299 | 10.2% |
| Other Lands | 4,268 | 18.9% |
| Water | 623 | 2.8% |
| **Total** | **22,584** | **100.0%** |

*Source: USDA-NRCS, 1982, Waushara County, 2003.*

## Natural Resources

This section will describe the general soils' associations of the Town of Mount Morris together with the soils' suitability for on-site waste disposal, septage spreading, the potential for building site development and steep slopes. It will also explain the water resources of the area including watersheds and drainage; lakes, ponds and quarries; rivers and streams; floodplains; wetlands and groundwater. Wildlife, parks, open space, recreational and mineral resources will also be touched upon.

### *Soils*

Soils provide the physical base for development and agriculture within a community. Knowledge of their limitations and potential difficulties is important in evaluating crop production capabilities and other land use alternatives such as residential development, and utility installation. The criteria considered by the Natural Resource Conservation Service (NRCS) in establishing the severe rating of soils include wetness, shrink–swell potential, bearing strength, susceptibility to flooding, land spreading, slope steepness, and frost action.[4] Severe soil limitations do not necessarily exclude areas from being developed, but instead indicate that more extensive construction measures must be taken to prevent environmental and property damage.

Soils are classified according to their associations, which are a grouping of similar soil types based on geographic proximity, physical characteristics, and permeability. There are four major soil associations within the Town of Mount Morris.

**Plainfield-Okee-Richford Association soils** are sloping to steep sandy soils located on moraines, hills, and terraces. Plainfield soils are rapidly permeable and excessively drained, while Okee and Richford soils are moderately permeable and somewhat excessively drained. Slopes range from 6 to 30 percent. While some of the Richford soils are used for cropland, most acreage in this association is used for woodlands. These soils are especially suited for pine species.

**Plainfield-Richford-Boyer Association soils** are nearly level and gentle sloping soils that are well drained to excessively drained sandy soils located on outwash plains and terraces. Most acreage in this association is used as irrigated cropland; a few areas are suitable for woodlands. Soil erosion and very rapid permeability are the main concerns with this association.

**Kingsville-Meehan Association soils** are nearly level and gently sloping soils that are poorly drained sandy soils located on glacial outwash plains, glacial depressions, and lake basins. Most of the acreage in this association is used as cropland; some areas are used as pasture or woodlands. Many of the areas are drained and used as irrigated cropland. The main concerns of this association are wetness and low available water capacity.

**Houghton-Adrian-Willette Association soils** are nearly level poorly drained, mucky soils; located in depressions of outwash plains, glacial lake basins, and moraines. Most of the acreage in this association is used for water tolerant native vegetation; however a few areas

[4] U.S. Department of Agriculture Soil Conservation Service. 1989. *Soil Survey of Waushara County, Wisconsin*.

can be drained and used for specialty crops. The main management concerns are wetness, subsidence when the soils are drained, and a short growing season caused by cold air flowing into depressions.

### *On-Site Waste Disposal*

Exhibit 5-2 identifies suitability for on-site waste disposal options based on an evaluation of soil characteristics. This map is not intended to serve as a substitute for on-site soil investigations, but rather as an indicator of reasonable expectations for soils underlying a site.

Evaluation of the soil data indicates that the vast majority of the soils in the Town of Mount Morris (82.7%) are rated suitable for conventional or at-grade in-ground pressure or mound systems (Table 5-6). Generally, soils near streams and rivers are the least suitable for on-site waste disposal. Areas with high groundwater or characterized by poorly drained soils are also more likely to be unsuitable for on-site systems.

Almost all of the soils in the Town of Mount Morris are capable of supporting private on-site wastewater disposal systems. ***About 78 percent of the area in the Town of Mount Morris is suitable for conventional systems; while another 4.9 percent is suitable for at-grade, in-ground pressure and mound systems.*** The remaining 11.8 percent (2,673 acres) of the soils in Mount Morris are rated unsuitable for on-site systems due primarily to wet soil conditions and low permeability. Water features account for 2.8 percent of the surface area within the Town of Mount Morris.

**Table 5-6. Soil Limitations for On-Site Waste Disposal**

| | Conventional | | At-Grade[1] | | Holding Tank[2] | | Unsuitable | | No Rating | | Water | | Total |
|---|---|---|---|---|---|---|---|---|---|---|---|---|---|
| Community | Acres | Percent | Acres | Percent | Acres | Percent | Acres | Percent | Acres | Percent | Acres | Percent | Acres |
| T. Mount Morris | 17,559.89 | 77.8% | 1,116 | 4.9% | 608 | 2.7% | 2,673 | 11.8% | 5 | 0.02% | 623 | 2.8% | 22,584 |

[1] *Includes in-ground pressure and mound systems.*

[2] *Includes new technology systems producing $10^4$ or less coliform fecal units (cfu) per 100ml.*

*Source: USDA-NRCS, 1982, Waushara County, 2003.*

### *Building Site Development*

The USDA-Natural Resource Conservation Service has evaluated soil characteristics and rated soil potential for building site development based upon wetness, shrink-swell potential, bearing strength, susceptibility to flooding, slope steepness, and frost action. The ratings range from low to very high potential. Typically, areas near flowages and in wetlands have the lowest ratings. Exhibit 5-3 identifies soil potential for building site development. ***About forty percent (8,979 acres) of the Town of Mount Morris is made up of soils that are considered to have a very high suitability for building site development***, while an additional 23.2 percent (5,232 acres) have a medium suitability (Table 5-7). Approximately 34 percent (7,750 acres) of the Town is rated very low or is not rated for building site development. Water accounts for about three percent of the area.

**Table 5-7. Soil Potential for Building Site Development**

| Community | Very High | | Medium | | Very Low, No Rating | | Water | | Total |
|---|---|---|---|---|---|---|---|---|---|
| | Acres | Percent | Acres | Percent | Acres | Percent | Acres | Percent | Acres |
| T. Mount Morris | 8,979 | 39.8% | 5,232 | 23.2% | 7,750 | 34.3% | 623 | 2.8% | 22,584 |

*Source: USDA-NRCS, 1982, Waushara County, 2003.*

### *Septage Spreading*

The Waushara County Land Conservation Office has evaluated soil characteristics for the suitability of septage spreading based on groundwater depths, permeability, soil texture, slope, wetness, and soil depths (Exhibit 5-4). The ratings range from none or slight to severe. Soils rated slight are relatively free of limitations that affect the intended use or have limitations that are easily overcome. Soils with moderate limitations can normally be overcome with corrective planning, careful design, and good management. Soils rated severe have physical limitations which are severe enough to make the use of the soil doubtful for the proposed use. Septage spreading cannot occur within 300 feet or rivers and streams or within 1,000 feet of lakes unless they are incorporated into the soil within 72 hours of application. Spreading rates need to be based on current soil tests, on-site vegetation, and a septic nutrient test.

***Approximately one-third of the soils (33.7%, 7,622 acres) pose a slight risk to no limitations for septage spreading within the Town of Mount Morris.*** A total of 29.2 percent (6,589 acres) are listed as having a moderate risk, while 34.3 percent (7,742 acres) of the soils in Mount Morris are considered a severe risk for septage spreading (Table 5-8). The remaining 631 acres (2.8%) are either water or not rated.

**Table 5-8. Soil Limitations for Septage Spreading**

### *Geography and Topography (Scenic Resources)*

The local communities in the Waushara County are defined by diverse topographical features[5]. Evidence of several phases of the Wisconsin Glacier can be found in the County.[6] The western edge of the County is a flat outwash plain. A narrow moraine is located on the eastern boundary of this outwash plain extending through the Villages and towns of Coloma, Hancock and Plainfield. This moraine ridge creates a groundwater divided separating the County's groundwater flow east and west. Central Waushara County (City of Wautoma, Village Wild Rose and surrounding towns) gradually flattens to a rolling plain as you move eastward across the County. The eastern third of the County is a gently rolling lake plain. The southeastern areas of Waushara County were once occupied by Lake Oshkosh and are characterized by relatively flat to gently rolling plains. The glacial plain areas of Waushara County have

[5] WDNR, *Ecological Landscapes of Wisconsin; 2001*

[6] Dutch, S. 2003. *Lake Oshkosh Drainage*. http://www.uwgb.edu/dutchs/geolwisc/geohist/wi12ka.htm

expansive deposits of red clay and organic-rich soils.[7] This combination has resulted in expansive wetlands and valuable agricultural areas.

As a result of glacial activity, land relief within Waushara County is quite varied.[8] ***Within the Town of Mount Morris, land relief is approximately 312 feet; however this does not represent the majority of land relief within the Town. The Nordic Mountain Ski Hill (a granite monadnock located in Section 15) peak is at 1,137 feet above sea level. If this land feature is not included, the town's land relief is 125 feet from a low of 825 feet above sea level near the Willow Creek corridor to an average high of 950 feet above sea level in several areas throughout the northern portions of the Town.***

### *Steep Slopes*

Exhibit 5-5 indicates areas that have slopes greater than 12 percent. ***Approximately seventeen percent (16.9%, 3,821 acres) of the Town of Mount Morris is classified as having slopes in excess of 12 percent*** (Table 5-9). In the Town of Mount Morris, steep slopes are scattered, however a large concentration of them are associated with the Nordic Mountain Ski Hill. Steep slopes are generally found in conjunction with moraines, drumlins, and other glacial features.

**Table 5-9. Steep Slopes**

| | 0-12 Percent | | >12 Percent | | No Rating, Water | | Total |
|---|---|---|---|---|---|---|---|
| Community | Acres | Percent | Acres | Percent | Acres | Percent | Acres |

*Source: USDA-NRCS, 1982, Waushara County, 2003.*

## Water Resources

Water resources are sources of water that are useful or potentially useful to humans. Water is important because it is needed for life to exist. Water is used for household, agricultural, recreational, industrial and environmental activities[9]. Essentially all these uses require fresh water.

### *Watersheds and Drainage*

The WDNR has divided the state into 24 hydrological based geographic management units (GMUs) or basins. Each GMU is further divided into smaller units based on smaller sub-watersheds. The Wisconsin DNR has completed several reports analyzing water quality for designated GMUs. [10]

***Surface water drainage for the Town of Mount Morris is predominately located within the Wolf River Basin, with the south and southwest areas of the Town falling***

[7] Attig, J., et al. 2005. *Glacial Lakes Wisconsin and Oshkosh: Two Very Different Late-Glacial Ice-Marginal Lakes*. http://gsa.confex.com/gsa/2005NC/finalprogram/abstract_86950.htm

[8] USGS. 1984. *USGS 7.5 Minute Quadrangle Maps*.

[9] Wikepedia, http://en.wikepedia.org/wiki/Water_resources, 2/16/07.

[10] WDNR. 2002 . *State of the Basin Reports.* http://dnr.wi.gov/org/gmu/stateofbasin.html

***within the Upper Fox River Basin.*** The Wolf River Basin covers a large area, draining over 3,600 square miles and fifteen sub-watersheds within portions of eleven counties, draining to the Winnebago Pool Lakes in Winnebago County. The Upper Fox River Basin covers 2,090 square miles and is comprised of fifteen different sub-watersheds.

**The Town of Mount Morris is divided into two sub-watersheds** (Exhibit 5-5). The Pine River and Willow Creek Sub-watershed (WR02) encompasses the vast majority of the Town, while the White River Sub-watershed (UF08) drains the west and southwest portions of the Town.

- **The Pine River and Willow Creek Sub-watershed** (Wolf River Basin) is the southernmost Sub-watershed within the Wolf River Basin and covers two-thirds of Waushara County. This sub-watershed ranked high priority for streams and medium priority for groundwater. The Pine River and Willow Creek drain the center two-thirds of Waushara County.

- **The White River Sub-watershed** (Upper Fox River Basin) encompasses 106 square miles. The town's southeast corner falls within the northwest corner of the White River Sub-watershed which drains surface water to the south and southeast. There are a number of streams within this sub-watershed (outside the town's boundaries) that are classified as exceptional water resources.

### *Lakes, Ponds and Quarries*

The majority of lakes within Waushara County are natural and of glacial origin. Sandy soils readily allow for the percolation of precipitation into the ground rather than overland flow directly to surface waters. This results in a continual recharge of the shallow aquifer underlying the county and surrounding region.[11] ***There are fifteen lakes and/or impoundments found within the Town of Mount Morris.*** (Table 5-10, Exhibit 5-5).

Lakes can be described as drainage, seepage, spring, or drained lakes. The vast majority of lakes within Waushara County are classified as seepage lakes. Seepage lakes do not have an inlet or an outlet and are recharged by precipitation and runoff supplemented by groundwater. Seepage lakes commonly reflect groundwater levels and can fluctuate seasonally.

The second most common type of lake in Waushara County are drainage lakes. These lakes have both an inlet and an outlet; the main water source is stream drainage. Drainage lakes in which one-half of the maximum depth is dependant on a dam are considered to be artificial lakes or impoundments.

Waushara County has a small number of spring lakes, primarily scattered throughout north central and south central Waushara County (towns of Springwater, Saxeville, Mount Morris, Leon, Dakota, and Richford). Spring lakes have an outlet, but have no inlet. The primary source of water is groundwater flowing into the bottom of the lake from inside and outside the immediate surface drainage area. Spring lakes are the headwaters of many streams.

[11] WDNR. 1970. *Surface Water Resources of Waushara County*.

Waushara County has one listed drained lake (located in Mount Morris). Drained lakes have no inlet, but have a continuously flowing outlet. Drained lakes are not groundwater fed. The primary source of water is from precipitation and direct drainage from the surrounding land. Water levels fluctuate depending on the supply of water.

**Table 5-10. Lakes and Ponds**

| Name | Acres | Maximum Depth Feet | Location (Section Number) | Lake Type |
|---|---|---|---|---|
| Brownlow (Mud) Lake | 10 | 21 | 12 | Spring |
| Cooks Lake | 5 | 7 | 14 | Seepage |
| Emerald Lake | 11 | 14 | 16 | Drained |

| Unnamed Lake | 1 | 13 | 18 | Not listed |

*Source: WDNR Wisconsin Lakes, 1995; ECWPC, 2008.*

### *Rivers and Streams*

### *There are four named river/streams in the Town of Mount Morris.*

**Willow Creek** flows south through the Town of Mount Morris, draining much of Waushara County. The upper one-third is considered a Class I trout stream while the middle one-third is considered a Class II trout stream. The head waters for Willow Creek originate from springs and the outlet of Silver Lake located in the Town of Springwater.

**Porters Creek** is heavily influenced by drastic water level fluctuations. The lower one-third suffers from agricultural runoff and feedlot drainage. Sediments contribute to the siltation of the Mount Morris Chain.

**Rattlesnake Creek** contributes 25 to 30 percent of the flow of Willow Creek. High streambanks are susceptible to erosion. Mount Morris Lake is an impoundment formed by a dam on Rattlesnake Creek.

**Little Silver Creek** is classified as a Class I Trout stream; however portions of the steam have been degraded due to a beaver dam and heavy siltation from cattle access to the stream.

There are several unnamed creeks within the Town of Mount Morris and throughout the County. In addition, agricultural ditches have been constructed throughout Waushara County to drain excess water from agricultural fields.

### *Floodplains*

Areas susceptible to flooding are considered unsuitable for development due to potential health risks and property damage. Flood Insurance Rate Maps for the unincorporated portions of Waushara County identify areas lying within the Town of Mount Morris.[12]

There are several mapped floodplains within the Town of Mount Morris. These floodplains are predominantly associated with wetlands and stream corridors; however a large floodplain area is located between Porters Lake Road and Bighorn Lane. This area is subject to drastic water fluctuations of Potters Creek and lake levels of Lake Morris (Exhibit 5-5).

Table 5-11 indicates the total number of acres and overall percentages of land which are within the 100-year floodplain. ***Approximately 10.1 percent (2,274 acres) of the land within the Town of Mount Morris lies in a floodplain***.

**Table 5-11. Floodplains**

| Community | Acres | Percent |
|---|---|---|
| T. Mount Morris | 2,274 | 10.1% |

*Source: FEMA, 2001, Waushara County, 2001*

Waushara County has adopted a floodplain ordinance requiring certain land use controls in designated flood hazard areas, thus making residents eligible to participate in the Federal Flood Insurance Administrative Flood Insurance Program. The program requires all structures that are constructed or purchased in designated flood areas utilizing loans from federally insured banks to be insured by a flood insurance policy.

### *Wetlands*

Wetlands act as a natural filtering system for nutrients such as phosphorous and nitrates. More importantly, wetlands also serve as a natural buffer protecting shorelines and stream banks from erosion. Wetlands are essential in providing wildlife habitat, flood control, and groundwater recharge. Consequently, local, state, and federal regulations place limitations on the development and use of wetlands and shorelands. The Shoreland/Wetland Ordinance adopted by Waushara County regulates development within 1,000 feet of the ordinary high water elevation mark of navigable lakes, ponds, or flowages or 300 feet from the ordinary high water elevation mark of navigable rivers or streams. The U.S. Army Corps of Engineers has authority over the placement of fill materials in virtually all wetlands two acres and larger or adjacent to navigable waters. The Wisconsin Department of Natural Resources and United States Department of Agriculture also have jurisdiction over wetlands within Wisconsin. The U.S. Department of Agriculture incorporates wetland preservation criteria into its crop price support programs. Prior to placing fill or altering wetland resources, the appropriate agencies must be contacted to receive authorization.

[12] FEMA. 2004. *Flood Insurance Rate Maps.*

The wetlands surveyed according to the Wisconsin Wetlands Inventory Map are shown in Exhibit 5-6.[13] They were identified on aerial photographs by interpreting vegetation, visible hydrology, and geography based on the U.S. Fish and Wildlife Service.

Wetlands in the Town of Mount Morris are scattered throughout the Town and are generally associated with steam corridors and lake shorelines. A larger wetland complex is associated with Potters Creek and a mapped floodplain between Porters Lake Road and Bighorn Lane east of STH 152. Another larger scale wetland complex is located north of Norwegian Lake east of 21st Drive and west of CTH G.

Table 5-12 indicates the number of acres and the percentage of wetlands within the Town of Mount Morris. Not including small wetlands (less than five acres); ***approximately thirteen percent (12.6%, 2,850 acres) of the Town of Mount Morris is classified as wetlands***. The amount and variety of wetlands have moderate limitations on the future growth and development of the area.

**Table 5-12. Wetlands**

| Community | Acres | Percent |
|---|---|---|
| T. Mount Morris | 2,850 | 12.6% |

*Source: WDNR, 2004; Waushara County, 2008.*

### *Groundwater*

In Waushara County, groundwater occurs mostly in the alluvium and glacial drift of the Quaternary Age and in the sandstone of the Cambrian Age. Precipitation in the form of either rain or snow is the largest contributor to recharge of the groundwater aquifers. Recharge is generally greatest in spring when water from melting snow and heavy rains saturates the ground and percolates to the water table. If discharge (the drawing out and use of groundwater) is greater than recharge, the elevation where the groundwater is extracted will fall and a local depression in the water table will result. Lower water levels cause the pumping lifts to increase and may reduce the yields of some of the wells.

Groundwater within the county occurs under both water table and artesian conditions. Water in the unconsolidated beds of sand and gravel is generally unconfined and occurs under water table conditions. Confined or artesian conditions exist locally where the water in the sand and gravel deposits is confined by layers of silt or clay.

***A groundwater divide, located west and parallel to the topographic divide, cuts diagonally through Waushara County. It extends from Marquette County, through the towns of Hancock and Coloma, the Village of Hancock, and then east of the Village of Plainfield to the Portage County line.[14] East of this divide, groundwater moves southeasterly toward the Wolf and Fox Rivers. West of this divide groundwater moves westerly toward the Wisconsin River.***

[13] WDNR. 1979. *Wisconsin Wetland Inventory Maps*.

[14] Geology and Ground-Water Resources of Waushara County, Wisconsin, Geological Survey Water-Supply Paper, 1809-B. Map of Waushara County, Wisconsin, Showing Configuration of Water Table, July 1957 and Location of Wells, Springs, and Streamflow-Measurement Sites.

According to the well water information obtained from the Central Wisconsin Groundwater Center in Stevens Point, some private wells located in this area contain nitrate levels that are higher than the EPA Safe Drinking Water Act standards of 10 mg/L.[15] These standards apply to municipal water sources only, but are strongly suggested thresholds for private systems. Nitrates originate in both agricultural and residential fertilizers, human sewage, and farm animal waste. Excessive levels of nitrates in drinking water have caused serious illness or death in infants under six months of age. Pregnant women are also advised not to drink water in which nitrate levels exceed the EPA standards. Due to sandy soils within the County, there is potential for groundwater contamination in the shallower aquifers. However, this potential is greatly reduced in the deeper aquifers. Table 5-13 lists the results of water sample tests conducted between 1990 and 2001.[16] For conversion purposes, 1 part per million (ppm) is the same concentration as 1 mg/L. ***Nine wells within the Town of Mount Morris exceeded the 10 ppm threshold level for nitrate.*** According to Waushara County, ***the majority of homes within the Town of Mount Morris are served by private wells.***

**Table 5-13. Nitrate Levels (ppm) in Waushara County Wells**

| Community | None Detected | 0.1 - 2.0 ppm | 2 -10 ppm | 10 -20 ppm | > 20 ppm |
|---|---|---|---|---|---|
| T. Mount Morris | 37 | 38 | 14 | 6 | 3 |

*Source: Central Wisconsin Groundwater Center, UW – Stevens Point, 2001.*

Although groundwater is found at varying depths throughout the area, the majority of groundwater in the Town of Mount Morris is found in depths greater than six feet (Table 5-14 and Exhibit 5-5). **Groundwater depths of less than two feet are found in about fifteen percent (3,412 acres) of the land area**, an additional 7.1 percent (1,604 acres) of the area has groundwater depths of 2 to 6 feet. Groundwater depths exceed 6 feet in 75 percent (16,937 acres) of Mount Morris. The remaining 2.8 percent (631 acres) in Mount Morris has either no rating or is surface water. In general, there is a strong correlation between areas of high groundwater and wetlands.

**Table 5-14. Depth to Groundwater**

| | < 2 Feet | | 2-6 Feet | | > 6 Feet | | No Rating | | Water | | Total |
|---|---|---|---|---|---|---|---|---|---|---|---|
| Community | Acres | Percent | Acres | Percent | Acres | Percent | Acres | Percent | Acres | Percent | Acres |
| T. Mount Morris | 3,412 | 15.1% | 1,604 | 7.1% | 16,937 | 75.0% | 8 | 0.0% | 623 | 2.8% | 22,584 |

*Source: USDA-NRCS, 1982. Waushara County, 2003.*

According to the *Wisconsin Administrative Code, Chapter ATCP 30* Atrazine*, Pesticides; Use Restrictions*, atrazine prohibition areas have been established throughout Waushara County and within the Town of Mount Morris. In the prohibitation areas no person can apply, mix or load any atrazine product, except under special conditions. ***The Atrazine Prohibition Area includes sections 6, 7, and 18*** (Exhibit 5-1). The Department of Agriculture has determined these areas based on well samples. These areas are monitored, and if atrazine is not applied, the levels may diminish and may be removed from the list.

[15] USEPA. 2005. *List of Drinking Water Contaminants & MCLs.* http://www.epa.gov/safewater/mcl.html.
[16] Central Wisconsin Groundwater Center. 2001. *UWEX Private Well Project: Waushara County.*

### *Natural Springs and Artesian Wells*

There are a number of natural springs and artesian wells scattered throughout Waushara County. A natural spring can occur when an impermeable layer (usually consisting of clay) forces the water table to the surface or when water-bearing crevasses in fractured rock intersect the surface. An artesian well is created when a well is drilled into a confined aquifer which is recharged from a source located at a higher elevation[17]. The majority of springs within Waushara County are gravity depression springs, generally located in the eastern portions of the County.

### *Groundwater Planning*

Water quality and quantity have been a concern for Waushara County communities. Low lake levels throughout Waushara County underscore a more pressing problem: groundwater quantity and quality preservation. Communities throughout East Central Wisconsin have been challenged with a number of issues ranging from potable water supply shortfalls to contamination issues such as elevated arsenic and radium levels. A prolonged drought coupled with increased water demands may be contributing to a declining water table. The anticipated population increases, agricultural irrigation demands, and growing recreational demands will continue to place significant demands on Waushara County's groundwater resources.

With an ever increasing demand on current groundwater supplies, local communities must assess how local and county-wide land use decisions will continue to affect groundwater quantity and quality. Identifying soil characteristics, water table levels, and groundwater susceptibility is just a beginning step in this process. Other underlining geological characteristics such as bedrock, groundwater flow direction, private well information, community groundwater pumping rates, and water table depth will be essential in understanding the current status of groundwater. Moreover, the abundance and quality of surface water is directly tied to groundwater supplies. Many streams and lakes rely on groundwater as their primary source of water; thus, local lake levels are directly tied to groundwater levels. Human impacts such as high capacity wells, irrigation systems, and others also place demands on groundwater supplies.

Additional information and technical expertise is available from several governmental and academic agencies statewide. The Center for Land Use education has completed several case studies and groundwater planning assistance documents for local communities. Additional information can be found at http://www.uwsp.edu/cnr/landcenter/groundwater/index.html.

## Wildlife Resources

### *Wildlife Habitat*

Waushara County falls within the following ecological landscapes[18]:

[17] Wisconsin Department of Natural Resources, Source Water Springs and Natural Wells http://dnr.wi.gov/org/water/dwg/OpCert/HTML/chapter2/sw2a.htm,

[18] WDNR, 2002. *Ecological Landscapes of Wisconsin*

- **Central Sand Plains** is located in western Waushara County, occurring on a flat, sandy lake plain, and supports agriculture, forestry, recreation, and wildlife management. This Ecological Landscape formed in and around what was once Glacial Lake Wisconsin, which contained glacial meltwater extending over 1.1 million acres at its highest stage.

- **Central Sand Hills** encompasses the majority of Waushara County and is located at the eastern edge of what was once Glacial Lake Wisconsin. The landforms in this Ecological Landscape are a series of glacial moraines that were later partially covered by glacial outwash. The area is characterized by a mixture of farmland, woodlots, wetlands, small kettle lakes, and cold water streams, all on sandy soils. The mosiac of glacial moraine and pitted outwash throughout this Ecological Landscape has given rise to extensive wetlands in the outwash areas, and the headwaters of coldwater streams that originate in glacial moraines.

- **Southeast Glacial Plains** is located in the eastern portions of Waushara County, and are made up of glacial till plains and moraines. Most of this Ecological Landscape is composed of glacial materials deposited during the Wisconsin Ice Age.

***The entire Town of Mount Morris falls within the Central Sand Hills ecological landscape.*** This ecological landscape supports numerous habitat types throughout Waushara County for a varied and abundant wildlife and fish community. Habitats found within Waushara County include streams, lakes, rivers, woodlands, marshes, open wet meadows, and fallow/abandoned farmland. White-tailed deer and small mammals such as opossum, raccoon, gray and fox squirrels are abundant in wooded areas. Lakes and streams support diverse warm and cold water fisheries. Wetlands attract waterfowl during spring and fall migrations as well as during the nesting season. Other wildlife found in the area include grassland and wetland birds, cottontail rabbits, mink, otter, muskrats, red fox, and a wide variety of songbirds and similar passerines.

### Rare, Threatened and Endangered Species and Natural Communities

The Wisconsin Department of Natural Resources maintains a database of rare, special concern, threatened, and endangered species and natural communities in Waushara County.[19] In order to protect these communities from harm, their exact locations are not released to the public; however, Waushara County has access to this database. When a development proposal is presented to the county, the WDNR database is consulted prior to granting approval. Before development, precautions should be taken to minimize adverse impacts which could disturb potential habitats for these flora and fauna. A list of the rare, threatened, and endangered species and natural communities is included in Appendix D (Table D-1).

### *Exotic and Invasive Species*

Non-native species commonly referred to as exotic or invasive species have been recognized in recent years as a major threat to the integrity of native ecosystems, habitats, and the species that utilize those habitats. Invasive species disrupt native ecosystems by out-competing native plants and animals for valuable resources such as food and space. The resulting competition between native and invasive species has the potential to completely displace native species.

[19] WDNR. 2005. *Natural Heritage Inventory Program*. http://dnr.wi.gov/org/land/er/nhi/.

Invasive species are found in both aquatic and terrestrial habitats. The WDNR updates a list of plant and animal invasive species in Wisconsin. This list can be found on the Department's website at: http://dnr.wi.gov/invasives/. Human livelihood and quality of life are greatly altered by invasive species; they hamper boating, swimming, fishing, and other water recreation; place an economic burden on local communities in eradication and control costs; and in some instances present a potential fire hazard. Prior to introduction of any non-native fish or wildlife, a permit from the WDNR is required pursuant to Wisconsin Statutes 29.736 and 29.745.

## Woodlands

Originally, the majority of Waushara County contained vegetation consisting of a mixture of oak forest species interspersed with pine forests and oak openings with an understory of prairie grasses. Waushara County once encompassed substantial areas of wetland conifers, lowland hardwoods, wet meadows with lowland shrubs, and marshes. Currently, upland forest areas are characterized by an oak-hickory association. Pine species are found throughout much of the county, while the wetland conifers have been replaced largely by shrub wetlands, general agriculture, and urban areas. Woodlands are found in large stands as well as smaller stands scattered throughout the Town. ***Woodlands comprise about 63 percent of the total land area in the Town of Mount Morris*** (Exhibit 5-6). Most of the wetland areas, especially along stream corridors, are predominantly forested.

Forests and woodlands can be classified into one of two categories: general (unplanted) woodlands and planted woodlands. General woodlands are naturally occurring forests and hedgerows. Planted woodlands are tree plantations in which trees are found in rows; these areas include orchards, timber tracts, Christmas tree production and other general uses. ***There are 10,094 acres of general woodlands and 4,135 acres of planted woodlands in the Town of Mount Morris.*** These woodlands should be considered as prime wildlife habitat areas; efforts to protect them from encroaching development should be evaluated (Table 5-15).

**Table 5-15. Woodlands**

| Community | General Woodlands | | Planted Woodlands | | Total Woodlands | | Total Acres |
|---|---|---|---|---|---|---|---|
| | Acres | Percent | Acres | Percent | Acres | Percent | |
| T. Mount Morris | 10,094 | 44.7% | 4,135 | 18.3% | 14,229 | 63.0% | 22,584 |

*Source: ECWRPC, 2005.*

The Forest Crop Law of 1927 (FCL) and the Woodland Tax Law of 1954 (WTL) were established to encourage sound forestry practices on private lands. In 1985, the Managed Forest Law (MFL) replaced both the FCL and WTL.[20] Enrollment in the FCL closed in 1986, and renewal in the program is not permitted. The last WTL contract expired in 2000. The MFL ensures the growth of future commercial crops while balancing individual property owner objectives and society's need for compatible recreational activities, forestry aesthetics, wildlife habitat, erosion control and protection of endangered resources. ***In 2008, a total of 3,443 acres were actively managed within the Town of Mount Morris under the MFL*** (Table 5-16).

[20] WDNR. 2005. *Managed Forest* Law. http://dnr.wi.gov/org/land/forestry/ftax/mfl.htm.

**Table 5-16. Managed Forest Law And Forest Crop Law Lands**

| T. Mount Morris | Acres | Percent |
|---|---|---|
| Managed Forest Law | 3,443 | 15.2% |
| Forest Crop Law | 0 | 0.0% |

*Source: WDNR, 2008.*

## Parks, Open Space, and Recreational Resources

Public open space such as parks and parkways are important to the quality of life within a community. These lands serve many purposes including outdoor recreation and education; buffers between different land uses; flood and stormwater management; habitat preservation; air and surface water quality improvements; protection of groundwater recharge areas; and aesthetics. They can also enhance the value of nearby properties. (See Utilities & Community Facilities Chapter)

### *Wisconsin Department of Natural Resources (WDNR) and Public Lands*

Since 1876, the State of Wisconsin has been acquiring land to meet conservation and recreation needs. Public lands managed by the Wisconsin Department of Natural Resources provide many opportunities and public spaces to hunt, fish, hike, canoe, or watch or photograph wildlife. All Wildlife Areas are open to a full range of traditional outdoor recreational uses. These include hunting, fishing, trapping, hiking, nature study, and berry picking. Dog training or trialing (hunting dog competitions) may be allowed by permit. A limited number of properties allow additional outdoor recreation at designated locations; like camping, bicycling, horseback riding, and snowmobiling.

State Fishery Areas (SFAs) protect important waterways in Wisconsin by providing a natural buffer from agricultural practices and urban runoff. SFAs often preserve and manage the headwaters or springs of streams which serve as the biological base for fish and other aquatic life. SFAs also increase the availability of public access to navigable waterways throughout the state. ***The WDNR owns approximately 882 acres within the Town of Mount Morris.*** The Town of Mount Morris has the following State owned and managed lands:

State Wildlife Areas:

***The Town of Mount Morris does not have any lands classified as State Wildlife Areas.***

State Fishery Areas:

- ***Willow Creek Fishery Area is composed of Willow Creek and three tributaries: Rattlesnake, Thorstad (Bruce), and Cedar Spring creeks.*** These waters are quality trout waters and are generally crystal clear. Public access is fragmented along Willow Creek and the tributaries corridor segments.

WDNR Managed Lands:

***The only State owned/managed lands in the Town of Mount Morris are those that are part of the Willow Creek Fishery Areas.***

### *Environmental Corridors*

Environmental corridors are continuous systems of open space created by the natural linkage of environmentally sensitive lands such as woodlands, wetlands, and habitat areas that provide important travel ways for a variety of wildlife and bird species. These features are sensitive natural resources; preserving the corridors from development protects habitat and keeps non-point source pollution to a minimum, thus ensuring that high quality groundwater and surface water is maintained and habitat is not impaired.

As stated above the WDNR owns lands associated with the Willow Creek Fishery Areas, to preserve these resources and more specifically to protect the invaluable habitat of the Willow creek corridor. It is important that development is directed away from this environmental corridor as well as other privately owned natural corridor areas which are scattered throughout the Town of Mount Morris.

### Mineral Resources

**Non-metallic Mineral Resources.** Non-metallic mineral resources include all mined minerals other than those mined as a source of metal. Economically important non-metallic minerals include building stone, lime, sand, gravel, and crushed stone. ***There are no active non-metallic mining sites in the Town of Mount Morris***.

**Metallic Mineral Resources.** Metallic mineral mining refers to mining of mineral deposits that contain recoverable quantities of metals such as copper, zinc, lead, iron, gold, silver, and others. ***There are no metallic mineral resource sites in the Town of Mount Morris***.

### Solid and Hazardous Waste

The Wisconsin Department of Natural Resources has inventoried the past and current sites which have been used for solid and/or hazardous waste disposal.[21] The list includes active, inactive, and abandoned landfills and collection sites. Inclusion of a site on the Registry does not mean that environmental contamination has occurred, is occurring, or will occur in the future. Instead, the document is intended to be utilized as a general information resource and planning tool. The list has been updated by WDNR and County staff; generally sites have been removed from the list that are not considered to be of a concern or could not be located. ***There are two sites in the Town of Mount Morris that are listed on the WDNR's registry of active, inactive and abandoned sites where solid waste or hazardous wastes were known or likely to have been disposed*** (Table 5-17).

[21] Wisconsin Department of Natural Resources. 1999. *Registry of Waste Disposal Sites in Wisconsin.*

**Table 5-17 Waste Disposal Sites**

| Facility Name | Location (Section number) |
|---|---|
| The Old Dump Ground | 21 |
| Town of Mount Morris | 23 |

*Source: WDNR, 1999 Registry of Waste Disposal Sites in Wisconsin*

## Air Quality

Air quality, particularly good air quality, is often taken for granted. Clean air is vital to maintain public health. Sound local and regional planning can minimize negative impacts to the air. Development patterns can impact automobile use. As communities become more spread out, the use of automobiles increases dramatically, resulting in more emissions and subsequent decreases in air quality. As residential development moves into rural areas, there are increased conflicts between non-farm residents and agricultural operations that emit odors and dust. Emissions from certain industrial uses also have the potential to impact air quality.

***There are no areas in Waushara County which exceed the limits of the National Ambient Air Quality Standards (NAAQS) for ozone, particulates, or carbon monoxide.*** The nearest ozone monitoring sites are in Brown and Outagamie Counties.[22]

## Cultural Resources

Cultural resources, like natural resources are valuable assets which should be preserved. These resources define a community's unique character and heritage. Included in this section is an inventory of historic buildings, sites, structures, objects, archeological sites and districts.

## State and National Register of Historic Places.

The Wisconsin Historical Society's Division of Historical Preservation (DHP) is a clearing house for information related to the state's cultural resources including buildings and archaeological sites. A primary responsibility of the DHP is to administer the State and National Register of Historic Places programs. The National Register is the official national list of historic properties in the United States that are worthy of preservation. The program is maintained by the National Park Service in the U.S. Department of the Interior. The State Register is Wisconsin's official listing of state properties determined to be significant to Wisconsin's heritage. The inventory is maintained by the DHP. Both listings include sites, buildings, structures, objects, and districts that are significant in national, state, or local history. Sites are chosen based on the architectural, archaeological, cultural, or engineering significance.

The following items are listed on the National Register for Waushara County:

- Alanson M. Kimball House – Town of Leon
- Waushara County Courthouse, Waushara County Sheriff's Residence and Jail – City of Wautoma
- Whistler Mound Group – Village of Hancock

[22] U.S. Environmental Protection Agency. 2007. *County Air Quality Report – Criteria Air Pollutants*.

***At the present, no properties within the Town of Mount Morris listed on the National Register***. The National Register is not a static inventory. Properties are constantly being added, and, less frequently, removed. It is, therefore, important to access the most updated version of the National Register properties. This can be found by accessing the DHP website (http://www.wisconsinhistory.org/histbuild/register/index.html) or by contacting the DHP at (608) 264-6500.

### Architecture and History Inventory (AHI)

In order to determine those sites that are eligible for inclusion on the National Register, the DHP frequently funds historical, architectural, and archaeological surveys of municipalities and counties within the state. Surveys are also conducted in conjunction with other activities such as highway construction projects. A minimal amount of this type of survey work has been done in Waushara County. The Wisconsin Historical Society records indicate that a survey was conducted in 1973.

***A search of the DHP's on-line Architecture and History Inventory (AHI) indicates that there is one property listed within the Town of Mount Morris.*** The property listed is a one to six room school that was built around 1875. Inclusion in this inventory conveys no special status, rights, restrictions, or benefits to owners of these properties. It simply means that some type of information on these properties exists in the DHP's collections. As is often the case, some of these properties may no longer exist. AHI is primarily used as a research and planning tool. Like the National Register, this is not a static inventory. Properties are constantly being updated. Information can be found on the DHP web site (http://www.wisconsinhistory.org/ahi/search.asp?cnty=WS).

### Archaeological Sites Inventory (ASI)

An inventory similar to the AHI exists for known archaeological sites across the state: the Archaeological Sites Inventory (ASI). Due to the sensitive nature of archaeological sites, information as to their whereabouts is not currently made available on-line. This information is distributed only on a need-to-know basis. Archaeological sites are added to ASI as they are discovered; discovery is a continual process. For technical assistance and up to date information on sites within a given area, contact the DHP at (608) 264-6500.

### Wisconsin Historical Markers

Wisconsin historical markers identify, commemorate and honor important people, places, and events that have contributed to the state's rich heritage. The Wisconsin Historical Markers Program is a vital education tool, informing people about the most significant aspects of Wisconsin's past. The Society's Division of Historic Preservation administers the Wisconsin Historic Markers Program. Applications are required for all official State of Wisconsin historical markers and plaques.[23] ***There are no historical markers in the Town of Mount Morris.***

According to the Wisconsin Historical Society, three historical markers or plaques are located within Waushara County:

[23] Wisconsin Historical Markers of the Wisconsin Historical Society. http://www.wisconsinhistory.org/hp/markers/index.asp. Accessed 10/28/08

- Sir Henry Wellcome – Town of Oasis
- Whistler Mound Group and Enclosure – Town of Hancock
- The Auroraville Fountain – Town of Aurora

### Museums/Other Historic Resources

Museums protect valuable historic resources for community enjoyment. Residents are welcome to learn from the exhibits and amenities they have to offer. Although ***there are no museums in the Town of Mount Morris***, several museums are located in close proximity to the town.[24]

- **Waushara County Museum** is housed in the former county jail in Wautoma. The Waushara County Historical Society maintains several exhibits detailing the genealogy, antiques, and the history of the sheriffs department. The original doors and bars of the jail cells have been preserved. Other nearby museums are located in the Oshkosh and Appleton areas.
- **Pioneer Museum** is located in the Village of Wild Rose. This museum encompasses the Victorian era home of Elisha and Jane Stewart, Pioneer Hall (bank and drug store), a country school, barn and carriage house.
- **Woodland Indian Mounds** in Whistler Park. These historic earthen structures were constructed by Woodland Indians during the period of 650 to 1200 AD.
- **Quarry Park** in Redgranite. In 1995, this popular quarry site was designated as a village park. Remains of some of the old quarry works can still be seen from the walking path that surrounds the quarry.

### Local History[25]

The earliest inhabitants of Waushara County were Native Americans. Considerable evidence of their civilization has been found. A total of 332 mounds, 49 camp and village sites, two spirit stones, two cemeteries, and several other archeological sites have been identified within the County[26]. ***Traces of Native American existence, in the form of mound groups, enclosures, a village site and campsites have been found in the Town of Mount Morris.***

Evidence was found in the following areas: Funk Lake (campsite), Hill's Lake (Protheroe group - village site, 13 mounds), Porter Lake (campsites, garden beds, 3 caches or storage pits), John's Lake (the lake is named after Sitting John, a Native American who lived here – campsites, spirit rock, garden beds), Norwegian Lake (2 campsites), Mount Morris – Pickerel Lake (campsites, caches, mound groups

On October 18, 1846, the Menominee Tribe ceded their land, including Waushara County, to the U.S. Government. In 1848, Isaac and William Warwick, the first white settlers to the area, built a log cabin in the Town of Marion. During the winter of 1848 to 1849, Philip Green settled on the site of the former Village of Wautoma. Other settlers soon followed. By 1849 a crude

[26] Fox, G., and E.C. Tagatz. *The Wisconsin Archeologist, Indian Remains in Waushara County, Volume 15, October 1916 No. 3*.

dirt road was built between Berlin (Strong's Landing) and Wautoma (Shumway Town). The 1849 road roughly corresponds with present day CTH F. The community of Sacramento, located on the south side of the Fox River, was platted in either 1849 or 1850 and a post office was established for the community in 1852. During 1849 and 1850, other settlers began gathering and making settlements in other parts of what is now Waushara County. On February 15, 1851, the Wisconsin Legislature established Waushara County and selected Sacramento as the county seat. The county originally consisted of a single town, the Town of Waushara. In 1852, Waushara County was organized for judicial purposes and in September 1854 the county seat was moved to Wautoma.

***E.W. Alverd and William Tibbitt were the first settlers in the Town of Mount Morris in 1849. The unincorporated community of Mount Morris was settled in 1854[27].***

**Ethnic Origin**

***In 2000, the most common ancestry identified by Town and county residents was German*** (Table 5-18; Appendix D, Table D-2). ***Thirty-eight percent (37.5%) of Town of Mount Morris and Waushara County residents claimed German ancestry.*** Several residents (15.1% Town of Mount Morris, 20.0% Waushara County) could not identify or chose not to report their ancestry. The second most common ancestry identified by Town of Mount Morris residents was Norwegian, while Waushara County residents as a whole claimed Polish. Approximately eight percent (7.5%) of Town residents claimed Norwegian, while 7.3 percent of Waushara County residents claimed Polish ancestry.

**Table 5-18. Top 5 Ancestries**

| | Ancestry | Total Population in Sample | Percent of Population |
|---|---|---|---|
| T. Mount Morris | German | 420 | 37.5% |
| | Unclassified or Not reported | 169 | 15.1% |
| | Norwegian | 84 | 7.5% |
| | Polish | 72 | 6.4% |
| | United States or American | 63 | 5.6% |
| | Total Population | 1,119 | 100.0% |
| Waushara County | German | 8,805 | 38.0% |
| | Unclassified or Not reported | 4,629 | 20.0% |
| | Polish | 1,681 | 7.3% |
| | Irish | 1,101 | 4.8% |
| | United States or American | 1,055 | 4.6% |
| | Total Population | 23,154 | 100.0% |

Note: Includes individuals who only reported one ancestry and the first response listed for those who reported multiple ancestries.

*Source: U.S. Census, 2000 STF 3A*

Research has shown that there is a high correlation between those communities with Pennsylvania German ancestry and those communities with concentrations of Amish population.[28] Within Waushara County, Amish settlements include 52 households, 291 people,

[27] http://wigenweb.org/waushara/cvtn/mmh.htm
[28] UW Madison Applied Population Lab

and an average household size of 5.6 persons (Appendix D, Table D-3). Thirty-three percent are employed in farming, 23 percent in dairying and 51 percent in woodworking. ***There are a number of Amish Settlements within the Town of Mount Morris.*** According to a power point presentation given by UW-Extension[29] in 2000, there were between 11 and 25 Waushara County residents over the age of 5, who speak a Germanic language at home in the Town of Mount Morris. It further states that "The Amish speak a Germanic language at home".

## Key Findings

### Agricultural Resources

- Agricultural land cover, which includes row crops, forages and grassland, comprised over 45.7 percent of the total area in the Town of Mount Morris (1991 - 1993).
- In 1997, an estimated 27 farms existed within the Town of Mount Morris. This represents a loss of one farm from 1990.
- In 1990, there were seven dairy farms in the Town of Mount Morris and 232 in Waushara County; by 1997 the Town lost three dairy farms, while the county lost 101 dairy farms.
- Between 1990 and 1997, 503 acres (5.7%) of farmland were lost in the Town of Mount Morris.
- Prime farmland accounts for 1,648 acres or 7.3 percent of the land in the Town of Mount Morris.

### Natural Resources

#### *Soils*

- About 78 percent of the area in the Town of Mount Morris is suitable for conventional systems; while another 4.9 percent is suitable for at-grade, in-ground pressure and mound systems.
- About forty percent (8,979 acres) of the Town of Mount Morris is made up of soils that are considered to have a very high suitability for building site development.
- Approximately one-third of the soils (33.7%, 7,622 acres) pose a slight risk to no limitations for septage spreading within the Town of Mount Morris.

#### *Geography and Topography*

- Within the Town of Mount Morris, land relief is approximately 312 feet; however this does not represent the majority of land relief within the Town. The Nordic Mountain Ski Hill's (a granite monadnock located in Section 15) peak is at 1,137 feet above sea level. If this land feature is not included, the town's land relief is 125 feet from a low of 825 feet above sea level near the Willow Creek corridor to an average high of 950 feet above sea level in several areas throughout the northern portions of the Town.
- Approximately seventeen percent (16.9%, 3,821 acres) of the Town of Mount Morris is classified as having slopes in excess of 12 percent.

[29] *Waushara County Demographic Overview, 2008*; as presented by UW-Extension Waushara County. Source data: Wisconsin Department of Administration.

### *Water Resources*

- Surface water drainage for the Town of Mount Morris is predominately located within the Wolf River Basin, with the south and southwest areas of the Town falling within the Upper Fox River Basin.
- The Town of Mount Morris is divided into two sub-watersheds: the Pine River and Willow Creek (Wolf River Basin) and the White River (Upper Fox River Basin).
- There are fifteen lakes and/or impoundments found within the Town of Mount Morris.
- There four named river/streams in the Town of Mount Morris; Willow Creek, Porters Creek, Rattlesnake Creek, and Little Silver Creek.
- Approximately 10.1 percent (2,274 acres) of land within the Town of Mount Morris lies in a floodplain.
- Approximately thirteen percent (12.6%, 2,850 acres) of the Town of Mount Morris is classified as wetlands.
- A groundwater divide, located west and parallel to the topographic divide, cuts diagonally through Waushara County. It extends from Marquette County, through the towns of Hancock and Coloma, the Village of Hancock, and east of the Village of Plainfield to the Portage County line. East of this divide, groundwater moves southeasterly toward the Wolf and Fox Rivers. West of this divide groundwater moves westerly toward the Wisconsin River.
- Nine wells within the Town of Mount Morris exceeded the 10 ppm threshold level for nitrate.
- The majority of homes within the Town of Mount Morris are served by private wells.
- Groundwater depths of less than two feet are found in about fifteen percent (3,412 acres) of the land area.
- The Atrazine Prohibition Area includes sections 6, 7, and 18.

### *Wildlife Resources*

- The entire Town of Mount Morris falls within the Central Sand Hills ecological landscape.
- Woodlands comprise about 63 percent of the total land area in the Town of Mount Morris.
- There are 10,094 acres of general woodlands and 4,135 acres of planted woodlands in the Town of Mount Morris.
- In 2008, a total of 3,443 acres were actively managed with the Town of Mount Morris under the MFL.

### *Parks, Open Space and Recreational Resources*

- The WDNR owns approximately 882 acres within the Town of Mount Morris
- The Town of Mount Morris does not have any lands classified as State Wildlife Areas.
- The Willow Creek Fishery Area is composed of Willow Creek and three tributaries: Rattlesnake (within the Town of Mount Morris), Thorstad (Bruce), and Cedar Spring creeks.
- The only State owned/managed lands in the Town of Mount Morris are those that are part of the Willow Creek Fishery Areas.

### *Mineral Resources*

- There are no active non-metallic mining sites in the Town of Mount Morris.
- There are no metallic mineral resource sites in the Town of Mount Morris.

### *Solid and Hazardous Waste*

- There are two (2) sites in the Town of Mount Morris that are listed on the WDNR's registry of active, inactive and abandoned sites where solid waste or hazardous wastes were known or likely to have been disposed.

### *Air Quality*

- There are no areas in Waushara County which exceeds the limits of the National Ambient Air Quality Standards (NAAQS) for ozone, particulates, or carbon monoxide.

### Cultural Resources

- At the present, no properties within the Town of Mount Morris listed on the National Register.
- A search of the DHP's on-line Architecture and History Inventory (AHI) indicates that there is one property listed within the Town of Mount Morris.
- There are no historical markers in the Town of Mount Morris.
- There are no museums in the Town of Mount Morris.
- Traces of Native American existence, in the form of mound groups, enclosures, a village site and campsites have been found in the Town of Mount Morris.
- E.W. Alverd and William Tibbitt were the first settlers in the Town of Mount Morris in 1849. The unincorporated community of Mount Morris was settled in 1854.
- In 2000, the most common ancestry identified by town and county residents was German. Thirty-eight percent (37.5%) of Town of Mount Morris and Waushara County residents claimed German ancestry.
- There are a number of Amish Settlements within the Town of Mount Morris.

## INTERRELATIONSHIPS WITH OTHER COMPREHENSIVE PLAN ELEMENTS

Wisconsin's important agricultural base is strongly integrated with its natural resources. Complex agricultural patterns are mixed with the state's natural features to form a patchwork of different land uses. Natural resource issues and concerns are closely linked to activities taking place on agricultural lands, not only adjacent to one another, but in the area. Soil erosion from farm fields and surface water runoff of crop nutrients and agricultural chemicals can impact the quality of streams, rivers, and lakes. Leaching of pesticides and nutrients has the potential to impact underground aquifers and affect drinking water supplies. There is a growing concern, especially in areas where rural residential development is occurring, about the impact of livestock farming on air quality. However, it is important to note that individual farming operations differ in management practices and vary widely in their contribution to these environmental problems.

Although agricultural activities can have negative impacts on the environment, they can also provide positive benefits. People value the open agricultural landscape and the benefits of maintaining wildlife habitats. Other benefits include nutrient recycling and enhanced water recharge.

The long, rich history of farming in Wisconsin has lead to the creation and exposure of many of the state's archaeological sites. In the County it is not uncommon to find evidence of native villages and burial mounds. Architecturally distinctive homes, barns, or entire farmsteads can reflect a significant time period, be associated with a notable person, reflect ethnic building types and construction practices, or represent an example of a once important agricultural specialty.

### Economic Development

Agriculture, natural and cultural resources should be considered when developing an economic development plan. It is important to remember that farming is still an important segment of Waushara County's rural economy. There may be specific economic development strategies that could help improve the well-being of local farmers; as long as financial conditions remain difficult, farmers will continue to find alterative uses for their land. Natural resources can provide a positive economic benefit to the area through recreational uses and overall aesthetics. However, protection and impact to the area's natural resources should be considered whenever a new business or development is proposed.

Cultural and natural elements provide opportunities for enhanced quality of life for current residents and can be a valuable tool to bring new workers and employers to the area. Historic preservation can be used to enhance unique qualities found in many of Waushara County's communities and towns.

### Housing

Agriculture and natural resources need to be considered when planning for the housing element. Most new residential construction is occurring on agricultural land or adjacent to significant natural resources such as a lake, stream, river, wetland, steep slope, or woods. Although these natural features provide aesthetically pleasing views for new homeowners, residential encroachment has detrimental impacts to the natural resource base. In many areas, housing development patterns have been rather haphazard. Scattered housing patterns have resulted in high costs to local communities in the form of lost farmland, increased demand for public services, and conflicts between homeowners, farmers, environmentalists, and recreationalists. Demand for home sites also drives land costs upward, reducing the ability of farmers to buy land to either begin farming or expand existing operations.

Existing older housing stock provides community character and reflects the historical development of the area. Older neighborhoods often offer the best opportunities for low income housing that can be rehabilitated using community improvement programs. Abandoned historic industrial buildings and old schools can be retrofitted and preserved to provide unique and attractive affordable housing for the community.

## Transportation

Transportation planning should consider the transportation needs of the area. Transportation is critical to the agricultural community because it provides access to suppliers, processors, haulers, and other support industries. The transportation network also allows goods to be brought to local, regional, national, and international markets. An efficient transportation network can increase income levels for Wisconsin farmers. Additionally, when planning for transportation, it is important to consider how rural residential developments and expanding agricultural operations will affect the transportation infrastructure and safety of the local area. Development and subsequent transportation improvements may impact the County's natural resources, wetland areas, and farmland adjacent to existing highway corridors. To minimize this impact, Waushara County and its communities should monitor these situations and consider development techniques that offer greater environmental protection.

When transportation corridors are expanded or proposed, care should be taken to minimize the effects on historical and cultural resources. Sensitivity must be shown for historic buildings and markers as well as archaeological sites and objects. The integrity and identity of a community is dependent on the preservation of its historic character and distinctive natural features. For example, the identity and aesthetics of a historic neighborhood can easily be threatened by a street widening project that removes large trees and narrows street terraces.

## Utilities and Community Facilities

Planned development leads to an efficient use of public infrastructure and reduces the amount of sprawl, which leads to the consumption of the rural landscape and other natural resources. Educating local officials and citizens about how local land use decisions impact the agricultural industry is important if the ability to grow and raise food is to be preserved. Diminishing farmland also affects a community's ability to land spread bio-solids, a byproduct of the wastewater treatment process. As large areas of farmland in close proximity to suburban areas decrease, communities must travel longer distances to dispose of this waste, thereby increasing the cost of sewage disposal.

Similar to farmland, our natural resources are limited and are being consumed at an alarming rate. Fossil fuel emissions lead to persistent health and environmental problems; regional haze; acidification of surface waters and forests; mercury in fish and other wildlife; acidic damage and erosion to buildings and other materials; ozone damage to forests; and eutrophication of water bodies. Renewable energy, or an alternative energy source, is created from sustainable natural resources. Corn and other cellulose products can be used to produce ethanol for alternative fuel vehicles. Wind energy provides an alternative to coal and natural gas boilers.

To maintain our quality of life, it is essential that not only is growth accommodated but that it be done while protecting our natural environment. The quality of the region's surface and groundwater resources are linked to the proper siting, installation, and maintenance of individual on site wastewater systems. Improper treatment and discharge of human waste and bacteria can contaminate public and private water supplies. The impact of increased development and associated impervious area can adversely affect groundwater quality and quantity.

Public buildings such as city or town halls, county courthouses, schools, water treatment plants, water towers, libraries, and fire stations are often architecturally significant landmarks in a community and are an important element of the community's character. Even when these buildings have outgrown their original use, they are often converted into a community center, senior center, housing or another productive use due to the community's attachment to them.

### Land Use

Land use is an integral part of all the elements in the plan. County residents value the preservation of agricultural land and the natural resources. There is a need to protect the rural atmosphere while allowing for controlled orderly development. Opportunities for historical preservation should also be considered in all future planning, zoning, and development decisions.

### Intergovernmental Cooperation

Many agricultural and natural resource issues go beyond local boundaries. Watersheds and other ecosystems, economic conditions, transportation patterns, and housing can impact regions as a whole. Air and water pass over the landscape so that one jurisdiction's activities can affect other jurisdictions located downwind or downstream. Regional development patterns and neighboring municipal land use policies also affect land price, availability of land, and the economic performance of local farms in adjoining towns. Unless towns, cities, villages, and counties communicate and coordinate effectively, it will be difficult to control growth in agricultural areas that preserves farmland and protects natural resources.

Preserving a community's heritage allows people to connect with the past. Unfortunately, little has been done in Waushara County to establish a base of historically significant buildings and other features. The Wisconsin Historical Society's Division of Historic Preservation provides funding to local governments and non-profit organizations. These funds can be sought independently or collectively with neighboring communities to fund architectural and historical surveys. Communities should work together to utilize existing local expertise on not only the history of the area, but also on historic preservation issues.

## POLICIES AND PROGRAMS

### State, Regional, County, and Local Policies

**Wisconsin Administrative Code.** Comm 83, revised during the 1990s to add provisions for new wastewater treatment system technologies and land suitability criteria, came into effect on July 1, 2000. Unlike the code it replaced, the new rules prescribe end results – the purity of wastewater discharged from the system – instead of specific characteristics of the installation. This rule provides land owners with more on-site wastewater treatment options, while at the same time protecting natural resources and groundwater. Within Waushara County, holding tanks are banned for new construction and are not allowed for replacement systems unless the property cannot support any other on-site sewage disposal systems.

NR-103, Water Quality Standards for Wetlands, establishes water quality standards for wetlands.

NR-115, Wisconsin's Shoreland Management Program, requires counties to adopt zoning and subdivision regulations for the protection of all shorelands in unincorporated areas.

NR-116, Wisconsin's Floodplain Management Program, requires municipalities to adopt reasonable and effective floodplain zoning ordinances.
NR-117, Wisconsin's City and Village Shoreland-Wetland Protection Program, establishes minimum standards for city and village shoreland-wetland zoning ordinances.

NR-135 was established to ensure that nonmetallic mining sites are properly abandoned. This law promotes the removal or reuse of nonmetallic mining refuse, removal of roads no longer in use, grading of the nonmetallic mining site, replacement of topsoil, stabilization of soil conditions, establishment of vegetative groundcover, control of surface water flow and groundwater withdrawal, prevention of environmental pollution, development and reclamation of existing nonmetallic mining sites, and development and restoration of plant, fish and wildlife habitat if needed to comply with an approved reclamation plan.

NR-243, Animal Feeding Operations, purpose of this chapter is to implement design standards and accepted manure management practices for concentrated animal feeding operations. This chapter also establishes the criteria under which the department may issue a notice of discharge or a permit to other animal feeding operations which discharge pollutants to waters of the state or fail to comply with applicable performance standards and prohibitions in ch. NR 151 .

**Wisconsin State Statutes**.

Wis. Stats. S. 93.90 and rule ATCP 51, Livestock Facility Siting Law regulates the siting of new and expanded livestock operations. The statute limits the exclusion of livestock facilities from agricultural zoning districts. It establishes procedures local governments must follow if they decide to issue conditional use or other local permits for siting livestock facilities. It also creates the Livestock Facility Siting Review Board to hear appeals concerning local decisions on permits.

Wis. Stats. S. 823.08, Actions against agricultural uses. The "Right to Farm" law protects farmers from nuisance law suits related to odor and noise in normal agricultural operations provided that pubic health and safety are not endangered.

### *Regional*

**East Central Wisconsin Regional Planning Commission.** East Central has adopted a regional comprehensive plan. As a part of this Plan, East Central has adopted several core policies and/or goals for agricultural, natural, and cultural resources.

**Agricultural Resources**

- Encourage appropriate and practical conservation oriented land and wildlife management practices.
- Promote management of renewable resources in ways compatible with sustained yield.
- Support land use patterns which are consistent with soil suitability and other environmental considerations.
- Encourage development on lands not suitable for farming and community recreation.

- Maintain employment and increased income in the agricultural sector.
- Encourage contiguous planned development to eliminate the intermingling of farms and urban land uses.
- Preserve land suitable for the production of food and fiber to meet present and future needs.
- Promote adoption of exclusive agricultural zoning districts to ensure that valuable farming lands are not lost or disrupted by urban land uses.

### Natural Resources

- Improve and protect surface and groundwater quality.
- Improve and/or maintain high air quality.
- Preserve and protect environmentally sensitive areas and promote the linking of these areas into environmental corridors.
- Manage wildlife and wildlife habitat in a manner that maintains ecological stability and diversity while considering the social and economic impacts.
- Protect nonmetallic mineral deposit sites.
- Ensure sufficient natural public open space is provided to meet the active and passive recreational needs of all residents while preserving and protecting the region's natural and cultural resources.
- Promote the consideration of design and aesthetics as a means of ensuring that communities and the region as a whole remain attractive as places to live, work, and play.

### Cultural Resources

- Establish a regional cultural resource implementation committee to work on pursuing implementation of the regional cultural resources plan.
- Hold an annual Cultural Resources Summit where local organizations, preservation professionals, HP commissioners, and the general public could hear speakers, exchange ideas and interact with each other, raise and address current issues and needs, and encourage support for cultural resource appreciation, enhancement, and protection.
- Create a web-based clearinghouse to serve the region, offering a variety of resources to support preservation of our prehistoric and historic, archeological, and cultural heritage.
- Ensure that decision makers have an understanding of, and an appreciation for, cultural resource protection.
- Make the public better aware of the tax benefits and protections which are available to local landmarks, state and national register site properties, as well as associated responsibilities.
- Work with the Wisconsin Historical Society to increase access to the WHS WHPD database and expand its usefulness to a broader user base.
- Develop an easy, reliable way to alert local government officials conducting permit reviews, and prospective buyers making land/home purchase decisions, as to the location of culturally significant properties by including these cultural resource status designations in all title transfer records.
- Work with local and regional groups to update the State's list of archaeological and historical inventories.

- Revise the Wisconsin State Statutes (709.02) to expand and include "archaeological sites" as well as historic buildings and sites, in the items which realtors must make known to potential buyers.
- Prevent generational loss of cultural heritage by encouraging the use of more cultural resource programming in the history and social studies curriculum of K-12 and higher education institutions in the region.
- Establish a Cultural Resource Center for the ECWRPC region.
- Encourage greater interaction and sharing of ideas, resource materials, etc. between the private sector and the public sector, volunteers and professionals.

### *County*

**Waushara County Zoning Ordinance.** The Waushara County Zoning Ordinance regulates zoning in the Town of Mount Morris. The following Chapters contain relevant information.

Chapter 22: Article IVs, Manure Waste Storage Ordinance regulates the location, design, construction, installation, alteration, closure, and use of manure storage facilities in order to prevent water pollution and the spread of disease. The county does not currently regulate large animal farming operations (CAFOs); however, regulation of these operations is being investigated and may be included under the Manure Waste Storage Ordinance.

Chapter 58, Zoning defines the different zoning categories and identifies what land uses are permitted in a given zone). Exclusive agricultural zoning is not practiced within the county. The A-G zone is designed primarily for large-scale agricultural uses of land related to growing of crops and the raising of livestock. However, single family residential homes are permitted. The A-R zoning provides a semi-rural type of environment, allowing for general agricultural use. According to the Waushara County Zoning Ordinance, all unincorporated areas within 1,000 feet of the ordinary high water mark of navigable lakes, ponds or flowages within 300 feet of the ordinary high water mark of a navigable river or stream fall under Shoreland Jurisdictional Area. Restrictions meant to protect these areas address lot size, setbacks, building, permitted uses, vegetative shore cover, grading and filling.

**Waushara County Farmland Preservation Plan.** Waushara County adopted a Farmland Preservation Plan on June 9, 1981. The goal of program is to preserve productive and potentially productive agricultural land, forest land, and environmentally sensitive areas while providing other areas for well planned growth in other appropriate areas of the county. Adoption of this plan allows farmers in preservation areas (existing farms with a minimum of 35 acres of productive cropland that are mapped as preservation areas) to sign a voluntary agreement under the State's Farmland Preservation Act for tax credits. Even though existing cropland is enrolled in this program, farmland in the County continues to be lost as more people seek homesites in rural areas.

## Federal and State Programs

### *Federal*

### United States Department of Agriculture

**Conservation Reserve Program (CRP) and Conservation Reserve Enhancement Program (CREP).** These programs protect sensitive land by reducing erosion, increasing wildlife habitat, improving water quality, and increasing forestland. CREP, a partnership between federal and state agencies and county land conservation departments, allows a landowner to enroll agricultural lands into various land conservation management practices. To be eligible under this program, farmland needs to be highly prone to erosion and must have been planted for 4 to 6 years before the enactment of the 2002 law. Marginal pastureland is also eligible. Producers need to develop and follow a plan for the conversion of cropland to less intensive use and to assist with the cost, establishment, and maintenance of conservation practices. More information can be found at http://www.nrcs.usda.gov/Programs/crp/ and http://www.fsa.usda.gov/FSA/webapp?area=home&subject=copr&topic=cep.

**Grassland Reserve Program (GRP).** This program is used to protect private grasslands, shrublands, and pasturelands. Agricultural areas which were formerly one of these ecosystems are also eligible for enrollment. The program helps to restore native grasslands and forbs by banning any agricultural practice which requires breaking the ground. Landowners must place their land into an easement for a period of between 10 and 30 years. An accompanying restoration plan delineates how best to return the area to a natural state. Program participants must share in installation costs. More information can be found at http://www.fsa.usda.gov/FSA/webapp?area=home&subject=copr&topic=grp.

**Wildlife Habitat Incentives Program (WHIP).** This voluntary program is used to develop or improve wildlife habitat on privately owned land. All private land is eligible for this program unless the land is enrolled in CRP, WRP, or other similar programs. Producers must design and implement a wildlife habitat development plan and assist in the implementation costs. More information can be found at http://www.nrcs.usda.gov/Programs/whip/.

**Grazing Lands Conservation Incentive.** This program provides cost sharing to improve grazing land management. More information can be found at http://www.nrcs.usda.gov/Programs/glci/.

**Environmental Quality Incentives Program (EQIP).** This voluntary conservation program promotes agricultural production and environmental quality and compatible goals. Financial assistance and technical help are offered to assist eligible participants in the installation and implementation of structural improvements and management practices which better protect agricultural land from environmental degradation. All private agricultural land is eligible for enrollment including cropland, grassland, pastureland, and non-industrial private forestland. Participants are required to develop and implement a EQIP plan that describes the conservation and environmental purposes to be achieved. Participants must share in the overall costs. More information can be found at http://www.nrcs.usda.gov/Programs/eqip/.

**Forest Land Enhancement Program (FLEP).** This program aids landowners in the application of sustainable forestry on private land. The program places a permanent easement on farmland. All non-industrial private forestlands are eligible for financial, technical, and

educational assistance. Landowners must develop and implement a management plan to harvest timber while protecting the environmental quality of the forest. More information can be found at http://www.fs.fed.us/spf/coop/programs/loa/flep.shtml.

**USDA Farmland Protection Policy Act (FPPA).** The purpose of this program is to maintain prime farmland in agricultural use through agricultural conservation easements. This program provides funding for state, tribal, or local government to purchase development rights on prime agricultural land. More information can be found at http://www.nrcs.usda.gov/programs/fppa/.

**Wetland Reserve Program.** This program which provides financial and technical assistance to private landowners to restore, protect, and enhance wetlands. The management goals include restoring both the functional values of the wetlands and providing optimal wildlife habitat. Most private wetlands that were converted to agricultural uses prior to 1985 are eligible. Participants must develop and follow a plan for the restoration and maintenance of the wetland and, if necessary, assist in the cost of restoration. More information can be found at http://www.nrcs.usda.gov/PROGRAMS/wrp/.

### US Environmental Protection Agency

**Clean Water Act (1977).** The Clean Water Act established the basic structure for regulating discharges of pollutants into the waters of the United States.

**National Pollution Discharge Elimination System (NPDES) Storm Water Program.** The NPDES program addressed the non-agricultural sources of storm water discharge and the Safe Drinking Water Act.

## *State*

### Wisconsin Department of Agriculture, Trade and Consumer Protection

**Wisconsin Farmland Preservation Program.** The 1977 Wisconsin Farmland Preservation Program was developed to preserve farmland through local planning and zoning; promote soil and water conservation; and provide tax relief to participating landowners. Landowners qualify if their land is located in an exclusively agricultural zoning district or if they sign an agreement to use their land exclusively for agricultural purposes. Participating landowners must comply with soil and water conservation standards set by the state Land Conservation Board.

### Wisconsin Department of Revenue

**Farmland Tax Relief Credit Program.** The Farmland Tax Relief Credit Program provides tax relief to all farmland owners with 35 or more acres. The credit is computed as a percentage of the first $10,000 in property taxes up to a maximum credit of $1,500. The DOR determines the actual percentage based on the estimated number of claims and amount appropriated for the credit.[30]

[30] Wisconsin Department of Revenue. 2002. *Division of Research and Policy Farmland Preservation Credit Program and Farmland Tax Relief Credit Program*.

## Wisconsin Department of Natural Resources

**Wisconsin Pollutant Discharge Elimination System Permits (WPDES).** The Wisconsin Pollutant Discharge Elimination System Permits (WPDES) was instituted as a complement to the NPDES program. WPDES regulates municipal, industrial, and agricultural operations which discharge (or have the potential to discharge) into local surface waters. Depending on the site-specific land use, the program regulates three different uses. Wastewater discharge permits regulate effluents discharged by industries and municipalities into surface and groundwater. Construction sites greater than one acre and industrial sites (non-metallic mining) are regulated through stormwater runoff permits.[31] Concentrated Animal Feeding Operations (CAFOs) with 1,000 animal units or more are regulated as a result of potential contamination from animal waste.[32] If an individual operation is found to be a significant contributor of pollutants, it may be considered a medium-sized CAFO; permits can be issued for medium-sized CAFOs which exceed 300 animal units.

In order to be defined a CAFO, the agricultural operation must first be defined as an animal feeding operation (AFO). AFOs are facilities which animals are stored, stabled, or fed for at least 45 days within a 12 month period and which vegetation or post-harvest residues are not sustained in the normal growing season over any portion of the facility.[33] Permits require CAFOs to provide runoff management plans for outdoor lots and feed storage areas; a manure storage facility plan/diagram, an annually updated comprehensive manure management plan; and routine monitoring and reporting of daily operations. Permits are issued for a maximum of five years. The permit system regulates land application, manure storage, and runoff management; it does not address noise, land values, traffic, odors, or other similar types of issues because there is no statutory authority to do so. These issues must be regulated by county and local ordinances.

**Forest Crop Law and Managed Forest Law.** In 1927, the Wisconsin Legislature enacted the Forest Crop Law (FCL), a voluntary forest practices program to encourage sound forestry on private lands. It has promoted and encouraged long-term investments as well as the proper management of woodlands. This law allowed landowners to pay taxes on timber only after harvesting, or when the contract is terminated. Since the program expired in 1986, participants are not allowed to re-enroll in the program. Since 1986, the Managed Forest Law has replaced the Forest Crop Law.

The Managed Forest Law (MFL), enacted in 1985, encourages the growth of future commercial crops through sound forestry practices. To be eligible, a landowner must own at least 10 contiguous acres of woodlands in a village or town. The landowner must implement a forestry management plan for future commercial harvests on the land. Contracts can be entered for a period of either 25 or 50 years. Portions of the land enrolled are open to public access for hunting, fishing, cross-country skiing, sight-seeing, and hiking. The program recognizes individual property owners' objectives while providing for society's need for compatible recreational activities, forest aesthetics, wildlife habitat, erosion control, and protection of endangered resources.

[32] Wisconsin State Statutes NR 243.
[33] U.S. Environmental Protection Agency and U.S. Department of Agriculture. 1999. *Unified National Strategy for Animal Feeding Operations.*

**Wisconsin Forest Landowner Grant Program.** The Wisconsin Forest Landowner Grant Program assists private landowners in protecting and enhancing their woodlands. Only private non-industrial forest owners of at least 10 acres but no more than 500 acres who have an approved or pending forest stewardship management plan are eligible for assistance. Qualified projects include reforestation; soil and water protection; wetland and riparian protection, restoration, and creation; fish and wildlife habitat enhancement; recreational, historic, and aesthetic forest enhancement; and endangered or threatened resources protection.

**Forest Land Enhancement Program (FLEP).** The purpose of this program is to assist private landowners in protecting and enhancing their forested lands and water by providing cost-share reimbursement for sustainable forestry practices.

**Partners for Fish and Wildlife.** Partners for Fish and Wildlife is a program which provides financial and technical assistance to private landowners to restore, protect, and enhance wildlife habitats on their land. This is a voluntary incentive based program. State resource agencies and individual landowners work closely with the Service to help establish priorities and identify focus areas. The restoration of degraded wetlands, native grasslands, streams, riparian areas, and other habitats to conditions as close to natural is emphasized. The program's philosophy is to work proactively with private landowners for the mutual benefit of declining Federal trust species and the interests of the landowners involved. A 50 percent cost sharing is required from individual landowners. Landowners must sign an agreement to retain the restoration for a minimum of 10 years. During this time period, no other private property rights are lost.

### Wisconsin Historical Society

The Wisconsin Historical Society (WHS) Division of Historic Preservation (DHP) provides funds for conducting surveys to identify and evaluate historical, architectural, and archaeological resources, nominating properties and districts to the National Register, and carrying out a program of comprehensive historic preservation planning and education. These are available to local units of government and non-profit organizations. Although funding is limited, the DHP identified target communities during each funding cycle. In recent years the DHP has favored underrepresented communities: unincorporated communities or villages or fourth-tier cities with a population less than 5,000. A set of funds is also designated for use by Certified Local Government (CLG) status communities. In addition, many private funding sources specifically target smaller communities in the more rural parts of the state. Other specific programs are listed below.

**Federal Historic Preservation Credit.** This program returns 20 percent of the cost of rehabilitating historic buildings to owners as a direct reduction in the federal income taxes. To qualify, buildings must be income producing historic buildings, must be listed on the National Register of Historic Places, or contribute to the character of a National Register Historic District.

**Wisconsin Supplemental Historic Preservation Credit.** This program returns an additional 5 percent of the cost of rehabilitation to owners as a discount on their Wisconsin state income taxes. Owners that qualify for the Federal Historic Preservation Credit automatically qualify for the Wisconsin supplement if they get National Park Service approval before they begin any work.

**25-Percent State Income Tax Credits.** This program can be used for the repair and rehabilitation of historic homes in Wisconsin. To qualify, buildings must be either listed on the state or national register; contribute to a state or national register historic district; or be eligible for individual listing in the state register.

# IMPORTANT FARMLAND CLASSES

- **Prime Farmland** - Those soils that produce the highest yields of food, fiber, feed, forage and oilseed crops when managed according to acceptable farming methods.
- **Prime Farmland Where Drained**
- **Unique Farmland** - Land other than prime that is used to produce specialty crops such as apple orchards, lettuce, carrots, celery, cauliflower, etc. that require a high management and investment level.
- **Unique Farmland Where Drained and Protected From Frequent Flooding**
- **Statewide Important Farmland** - Land in addition to prime and unique that is important to the State of Wisconsin for crop production.
- **Statewide Important Farmland Where Drained**
- **Statewide Important Farmland Where Drained and Protected From Frequent Flooding**
- **Local Important Farmland** - Land in addition to prime, unique and statewide that is important to Waushara County for crop production.
- **Local Important Farmland Where Drained**
- **Other Lands** - Land that has little value for producing crops.
- **Atrazine Prohibition Area**
- **Water Body**
- **Stream / River**
- **Municipal Boundary**

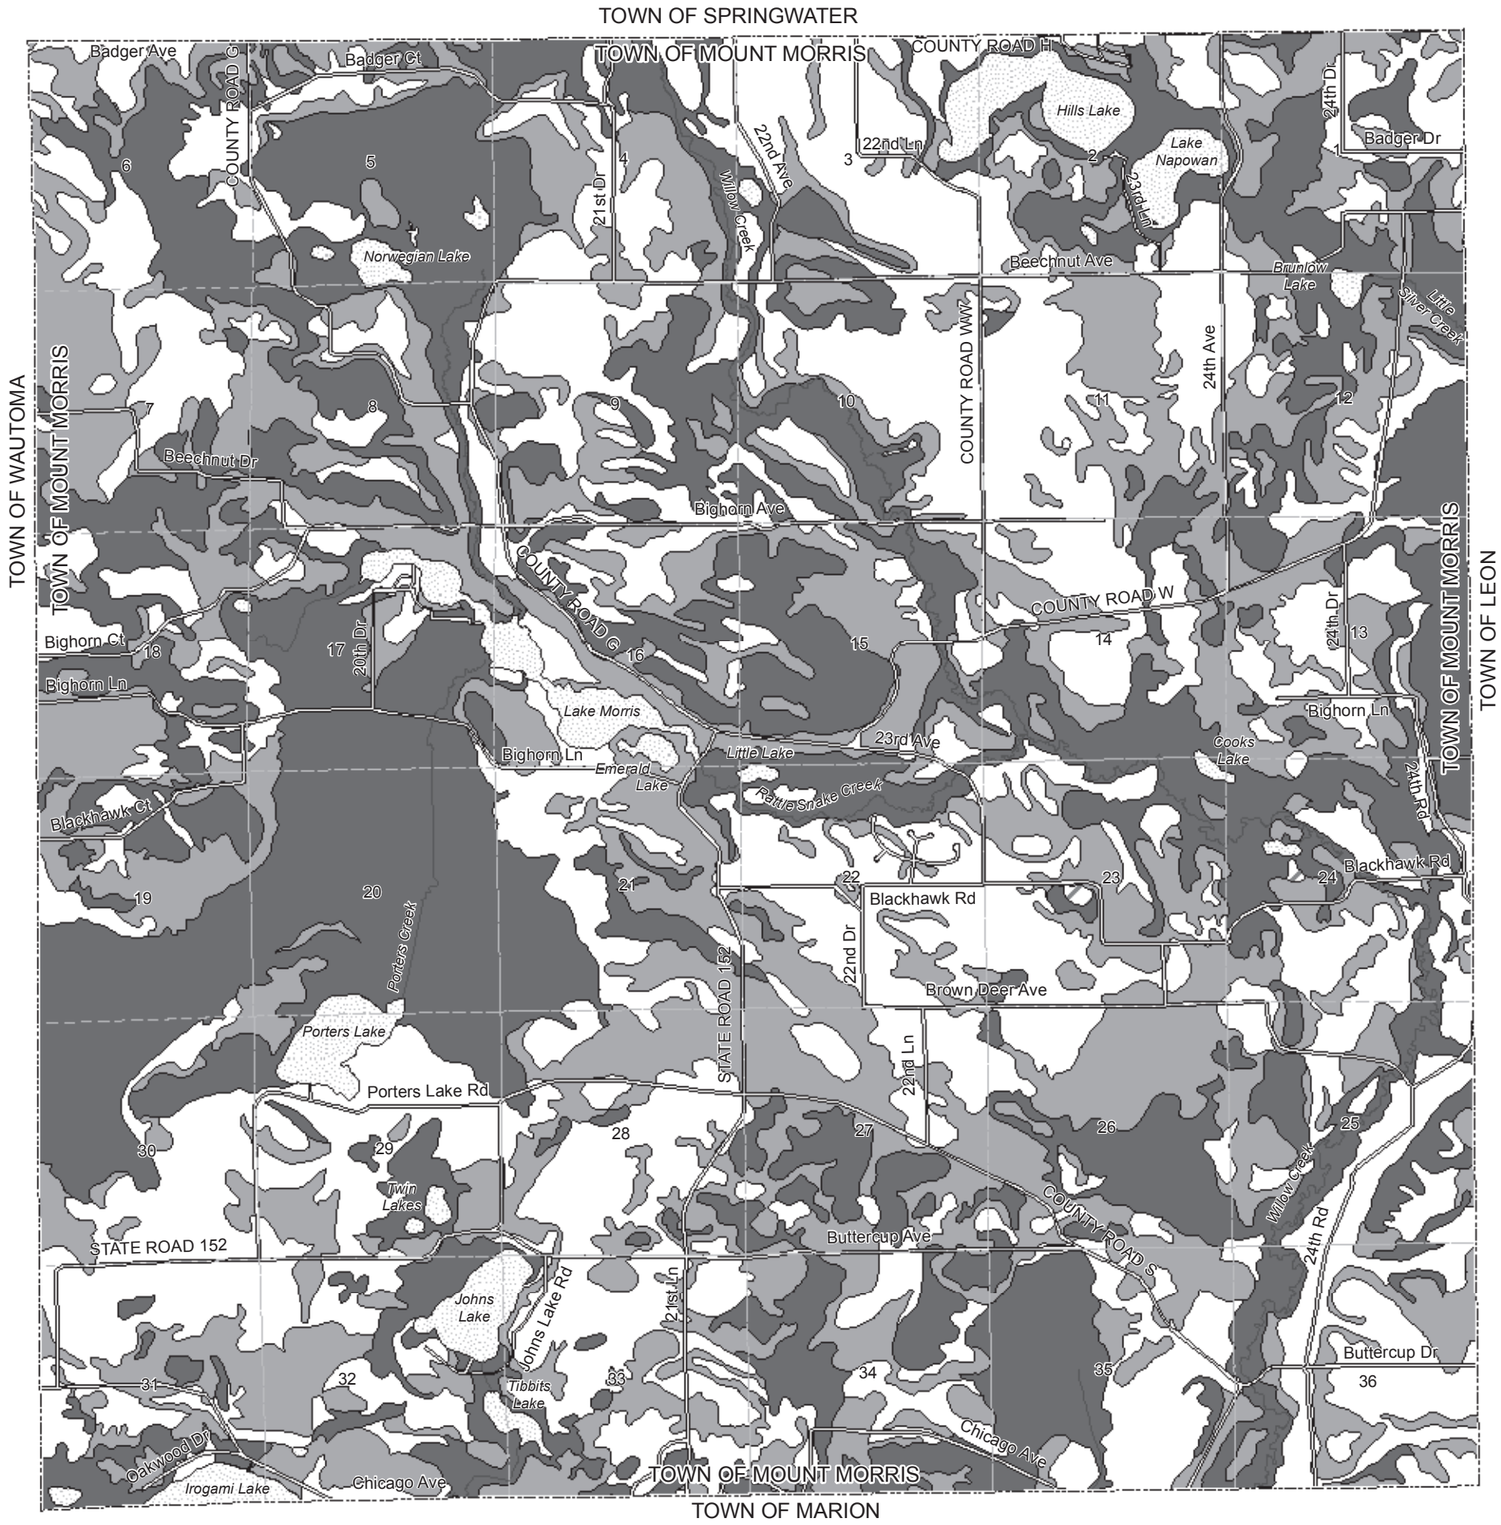
# EXHIBIT 5-4
# TOWN OF MOUNT MORRIS SOIL LIMITATIONS FOR SEPTAGE SPREADING



## Legend

- None to Slight - Soils relatively free of limitations that affect the intended use or the limitations are easy to overcome.
- Moderate - Soils with moderate limitations resulting from the effects of slope, wetness, soil texture, soil depth, groundwater, etc. Normally the limitations can be overcome with correct planning, careful design, and good management.
- Severe - Soils with severe limitations resulting from the effects of slope, wetness, soil texture, highwater table,etc. Soils rated as having severe limitation are severe enough to make the use of the soil doubtful for the proposed use. Careful planning and above-average design and management are required. This often includes major soil reclamation work.

# CHAPTER 6: ECONOMIC DEVELOPMENT

## INTRODUCTION

Planning for economic development is an on-going process in which a community organizes for the creation and maintenance of an environment that will foster both the retention and expansion of existing businesses and the attraction of new businesses and ventures. It is important to place an emphasis on existing resources which serve as assets for economic development efforts.

## INVENTORY AND ANALYSIS

Some components of the area's economy are presented in this chapter to better understand the state of the economy in the Town of Mount Morris. Characteristics reviewed in this element include educational attainment, employment and unemployment levels, location of workplace, travel times, and a look at the area's economic base.

### Educational Attainment

Table E-1 (Appendix E) presents educational achievement information from the 2000 Census for residents 25 years of age or older. ***A higher percentage of residents in the Town of Mount Morris (43.5%) received high school diplomas than the State of Wisconsin (34.6%).*** It is in the area of post-high school achievement where the state generally has a higher level of educational attainment. For example, 138 residents (16.8%) from Mount Morris completed four years of college or more. Comparatively, at the state level, 22.4 percent of residents have achieved this goal.

The U.S. Census Bureau reports that ***a person with a bachelor degree can expect to earn $2.1 million over the course of a career, nearly double what the expected earnings are for a high school graduate***.[1] The results of this study demonstrate there is a definite link between earning potential and education. Greater educational attainment is a goal that all of Wisconsin should be striving toward. Since the data suggests that many of the county's best educated residents are retirees, it points to the apparent lack of job opportunities in the area to retain or attract better educated members of the workforce.

### Labor Force

Labor force is an indicator of economic performance. It shows how quickly the labor force is growing and the extent to which people are able to find jobs. The labor force is defined as individuals currently with a job, the employed; and those without a job and actively looking for one, the unemployed.

Census information indicates that ***labor force growth rates for Town of Mount Morris (71.9%) dramatically exceeded Waushara County (29.4%), and the State (14.0%) growth rates between 1990 and 2000*** (Table E-2, Appendix E). Even though the labor market experienced overall growth in Waushara County, the unemployment rates in the county

[1] U.S. Census Bureau. 2002. *The Big Payoff: Educational Attainment and Synthetic Estimates of Work-Life Earnings.*

were higher than the state in both 1990 and 2000 (Table E-3 and Table E-4, Appendix E). According to census data, in 2000, Waushara County and Wisconsin had unemployment rates of 6.6% and 4.7%, respectively. The Town of Mount Morris (2.4%) was very low relative to the county and state. Table 6-1 includes more recent information for the county and state between 2001 and 2004.[2] According to Wisconsin Department of Workforce Development, unemployment rates dropped between 2004 and 2007 for both Waushara County and Wisconsin.

**Table 6-1. Annual Average Unemployment Rates**

| | 2004 | 2005 | 2006 | 2007 |
|---|---|---|---|---|
| Waushara County | 6.0% | 5.6% | 5.5% | 5.4% |
| Wisconsin | 5.0% | 4.8% | 4.7% | 4.9% |

*Source: Wisconsin Department of Workforce Development, 2004 to 2007*

## Economic Base Information

The composition and types of employment in the county and the town provides a snapshot description of the economic base in the area. Table 6-2 illustrates employment information by occupation and by industry.[3] ***The manufacturing (20.0%); education, health, social services (19.4%), construction (9.7%), and public administration (9.1%) industries employed over half (58.2%) of workers in the Town of Mount Morris in 2000.*** The Information (0.4%) and wholesale trade (2.9%) employed the fewest workers in the Town. In comparison, manufacturing (22.1%/22.2%), educational, health and social services (17.9%/20.0%), and retail trade (10.4%/ 11.6%) employed the largest percentage of workers in Waushara County and the state.

The positive aspect of this distribution is that the manufacturing sector, in general, pays higher wages than most service industries. The negative aspect, however, is that the manufacturing sector tends to be severely impacted by recessions, which is particularly painful for most Wisconsin Communities.

***The top three occupations for Town of Mount Morris workers in 2000 were management, professional, and related occupations (33.1%); sales and office occupations (21.5%); and production, transportation, and material moving occupations (18.7%)***. The top occupation in Waushara County was production, transportation, and material moving (25.0%), while in Wisconsin management, professional and related (31.3%) had the largest share of workers.

[2] Wisconsin Department of Workforce Development, 2004 through 2007. *Local Area Unemployment Statistics Estimates Report.*

[3] U.S. Census Bureau, 2000. *Community Profiles.* http://www.doa.state.wi.us/dir/wisconsin/index.html.

**Table 6-2. Employment by Occupation and Industry**

| | Town of Mount Morris | Waushara County | Wisconsin |
|---|---|---|---|
| **Occupation** | | | |
| Management, professional, and related occupations | 33.1% | 23.5% | 31.3% |
| Service occupations | 12.2% | 16.1% | 14.0% |
| Sales and office occupations | 21.5% | 21.4% | 25.2% |
| Farming, fishing, and forestry occupations | 0.8% | 2.9% | 0.9% |
| Construction, extraction, and maintenance occupations | 13.7% | 11.1% | 8.7% |
| Production, transportation, and material moving occupations | 18.7% | 25.0% | 19.8% |
| **Industry** | | | |
| Agriculture, forestry, fishing and hunting, and mining | 3.6% | 7.1% | 2.8% |
| Construction | 9.7% | 8.1% | 5.9% |
| Manufacturing | 20.0% | 22.1% | 22.2% |
| Wholesale trade | 2.9% | 3.1% | 3.2% |
| Retail trade | 6.9% | 10.4% | 11.6% |
| Transportation and warehousing, and utilities | 5.9% | 5.9% | 4.5% |
| Information | 0.4% | 1.3% | 2.2% |
| Finance, insurance, real estate and rental and leasing | 5.9% | 3.8% | 6.1% |
| Professional, scientific, management, administrative, and waste management services | 3.4% | 3.7% | 6.6% |
| Educational, health and social services | 19.4% | 17.9% | 20.0% |
| Arts, entertainment, recreation, accommodation and food services | 8.4% | 7.5% | 7.3% |
| Other services (except public administration) | 4.4% | 4.4% | 4.1% |
| Public administration | 9.1% | 4.6% | 3.5% |

*U.S. Census 2000, SF 3*

Table 6-3 lists the largest employers in Waushara County.[4] Two of the top nine employers are manufacturing facilities. This list also indicates that Waushara County, the Department of Corrections and three school districts provide a large share of public sector employment. Care for the elderly is provided by three of the top 20 employers.

### Travel Time to Work

Travel time to work provides information about the time residents spend commuting to work. ***On an average, residents from the Town of Mount Morris, Waushara County and the state spent less than 30 minutes traveling to and from work in 1990*** (Table 6-4). ***In 1990, average commute times for residents was 24.1 minutes in the Town of Mount Morris.*** County residents traveled an average of 21.8 minutes to work, while state residents traveled an average of 18.3 minutes to work.

**Table 6-3. Top 20 Public and Private Employers in Waushara County**

| Employers | Industry/Product/Service | Employees |
|---|---|---|
| Wautoma Public School | Elementary & secondary schools | 250-499 |
| County of Waushara | Executive & legislative offices, combined | 250-499 |
| Redgranite Correctional Institution | Correctional institutions | 250-499 |
| Magnum Products LLC | Other lighting equipment manufacturing | 100-249 |
| Milsco Manufacturing (Jason Incorporated) | Motor vehicle seating & interior trim mfg. | 100-249 |
| ~~Fleet Guard Inc~~ | ~~Miscellaneous general purpose machinery mfg.~~ | ~~100-249~~ |
| Tri-County Area School | Elementary & secondary schools | 100-249 |
| Wild Rose Public School | Elementary & secondary schools | 100-249 |
| Wild Rose Community Memorial | General medical & surgical hospitals | 100-249 |
| Mayville Engineering Co Inc | Metal coating & nonprecious engraving | 100-249 |
| Plainfield Trucking Inc | General freight trucking, local | 100-249 |
| Nordic Mountain LLC | Skiing facilities | 50-99 |
| Cooperative Care | Services for the elderly & disabled | 50-99 |
| The Copps Corp | Supermarkets & other grocery stores | 50-99 |
| Heartland Preston Inc | Homes for the elderly | 50-99 |
| Stone Ridge Meat & Country Market | Supermarkets & other grocery stores | 50-99 |
| Paramount Farms Inc | Potato farming | 50-99 |
| Pine Ridge of Wautoma LLC | Full-service restaurants | 50-99 |
| Wild Rose Manor (Wisconsin Illinois Senior Housing) | Nursing care facilities | 50-99 |
| Alabama Farmers Coop Inc | Floriculture production | 50-99 |

**Table 6-4. Mean Travel Time to Work, 1990 and 2000**

| | T. Mount Morris | Waushara County | Wisconsin |
|---|---|---|---|
| 1990 Mean Travel Time | 24.1 | 21.8 | 18.3 |
| 2000 Mean Travel Time | 32.4 | 27.1 | 20.8 |

*Source: U.S. Census 1990 and 2000, SF 3*

Between 1990 and 2000, average commute times rose for all jurisdictions, with the Town of Mount Morris experiencing a slightly higher increase in average commute times than the County (Tables E-5 and E-6, Appendix E). On an average, commute time for Town of Mount Morris residents increased by about 8.3 minutes, which was the largest increase when compared to the county and the state. ***In 2000, average commute times for residents from Mount Morris was 32.4 minutes***, County residents traveled an average of 27.1 minutes, and state residents traveled an average of 20.8 minutes to work.

Commuting times increased for several reasons. There was a decrease in the share of residents working at home and a sharp increase in the amount of people traveling more than 30 minutes to work. In 1990, 23.7 percent of the people in Mount Morris traveled more than 30 minutes to work, and 10.2 percent worked at home. By 2000, the share of people working at home had decreased to 4.2 percent, while the segment of people traveling more than 30 minutes had increased to 36.8%. This indicates that the residents had to travel further away from home to obtain adequate employment and/or wages.

## Location of Workplace[5]

Location of workplace data provides information on the direction and distance residents have to travel to find employment. Table E-7 (Appendix E) includes the Top 20 workplace destinations for Waushara County and Town of Mount Morris residents. According to the U.S. Bureau of Census, the over fifty percent (58.7%) of county residents worked in Waushara County in 1990. ***Town of Mount Morris residents were more dependent on Waushara County for employment; a total of 71.9 percent of the residents from the Town of Mount Morris worked in Waushara County in 1990.***

In 2000, the location of workplace somewhat mirrored the information from 1990 but showed a decreasing dependence on employment locations in Waushara County. ***The largest share of residents from the county (52.5%) and the Town of Mount Morris (64.6%) continued to work in Waushara County*** (Appendix E, Table E-7). While a shift of employment was experienced by Waushara County workers from the county to the Appleton-Oshkosh MSA, three out of the top five workplace destinations remained in Waushara County (Table 6-5). Town of Mount Morris workers had a slightly different workplace destination makeup. ***About 52 percent of workers found employment locally in the County, working in the City of Wautoma, Town of Wautoma, Village of Wild Rose and the Town of Mount Morris.*** The other top destination included the City of Oshkosh in Winnebago County.

**Table 6-5. Top Five Workplaces Destinations, 2000**

| Place of Residence | Place of Work | Number | Percent |
|---|---|---|---|
| Town of Mt. Morris | C. Wautoma | 128 | 25.6% |
| | T. Wautoma | 58 | 11.6% |
| | C. Oshkosh, Winnebago Co. | 39 | 7.8% |
| | V. Wild Rose | 38 | 7.6% |
| | T. Mt. Morris | 38 | 7.6% |
| | Top 5 Total | 301 | 60.2% |
| | Total Employed | 500 | 100.0% |
| Waushara County | C. Wautoma | 1,661 | 16.1% |
| | C Berlin, Green Lake Co. | 696 | 6.8% |
| | C. Oshkosh, Winnebago Co. | 686 | 6.7% |
| | V. Wild Rose | 612 | 5.9% |
| | T. Wautoma | 525 | 5.1% |
| | Top 5 Total | 4,180 | 40.6% |
| | Total Employed | 10,288 | 100.0% |

## Employment Forecast

The Wisconsin Department of Workforce Development calculates employment projections for the various industries and occupations for the State of Wisconsin.[6] These projections are completed on a statewide basis and growth is expected in all industries. ***It is anticipated***

[5] U.S. Census, 1990 and 2000.

[6] Wisconsin Department of Workforce Development, 2002. *Wisconsin Detailed Industry Employment Projections, 2002 – 2012*.

***that the largest increases will be seen in the education and health services sector.*** Educational services, which makes up part of this sector includes all public and private elementary, secondary and post-secondary schools. This sector also includes ambulatory health care. The ambulatory health care industry, which is estimated to have the highest growth, is made up of offices of physicians, dentists, and other health practitioners as well as home health care. ***While the state is expected to see the highest increases in this area, employment opportunities in Waushara County may differ.*** According to the various school districts serving the county, enrollment is declining. These declines in enrollment may be the result of limited work opportunities for county residents, an aging population, and the subsequent loss of residents with children in the school district. Education sector employment is unlikely to increase if enrollments continue to drop. It should be noted that it is difficult to forecast employment for small communities, since the addition or loss of one industry or employer greatly impacts the community's economic base.

### Industrial Park Information

***There are no industrial parks in the Town of Mount Morris.*** Most industrial uses within the Town are smaller in nature. The Roberts and the South industrial parks in the Village of Wild Rose, the South and Southeast industrial parks in the City of Wautoma, and the Redgranite Industrial Park in the Village of Redgranite are all located in proximity to the Town of Mount Morris. A total of 50 acres are available within these industrial parks. Table 6-6 contains more information about industrial parks within the county. When these parks become full, it is important that community leaders plan for the expansion of existing parks and for the development of land for future industrial and business sites. An area where infrastructure is already in place is the most cost efficient choice for the community.

**Table 6-6. Industrial Parks**

| Park Location / Name | Size (Acres) | Water | Sewer | Sanitary Sewer | Storm Sewer | Electricity | Rail | Highway | Avail. Acres | Private / Public | Improved / Not Improved |
|---|---|---|---|---|---|---|---|---|---|---|---|
| City of Berlin / Berlin North Business Park | 186 | Y | Y | Y | N | Y | N | STH 49,21,91 | 80 | Public | Improved |
| City of Wautoma / South Industrial Park | 19 | Y | Y | (1) | N | Y | N | STH 21,22,73 | 0 | Public | Improved |
| City of Wautoma / Southeast Industrial Park | 45 | Y | Y | (1) | N | Y | N | STH 21,22,73 | 8 | Public | Improved |
| Village of Coloma / Coloma Business Park | 42 | Y | Y | Y | N | Y | N | I-39, STH 21 | 25 | Public | Improved |
| Village of Redgranite / Redgranite Industrial Park[4] | 22 | Y | Y | (1) | N | Y | N | I-39, STH 21 | 22 | Public | Improved |
| Village of Wild Rose / Roberts Industrial Park | 23 | Well | Y | (2) | N | Y | N | STH 22 | 18 | Public | Improved |
| Village of Wild Rose / South Industrial Park | 9 | Well | Y | (2) | N | Y | N | STH 22 | 2 | Public | Improved |

## Business Retention and Attraction

***Tri-County Regional Development Corporation (TCREDC) is a partnership between Waushara County and Marquette and Green Lake counties.*** The TCREDC has a 6-member volunteer board of directors, and a fulltime director. The mission of the TCREDC is to work in cooperation with public and private entities; to promote the region and businesses in order to attract, stimulate and revitalize commerce, industry and manufacturing that results in the retention and creation of viable living wage jobs. Within the county, ***the Waushara County Economic Development Corporation, run by a board of volunteers, is working to foster new business development, and support and sustain existing businesses throughout the county.***

Several nearby communities also actively promote business retention and attraction.[7] The Berlin Community Development Corporation facilitates community growth by aiding in the expansion and retention of business in the City of Berlin and surrounding areas; the organization operates eight TIF districts throughout the City. The Redgranite Economic Development Committee manages the two TIF districts within the village and works to retain existing businesses and recruit new businesses to the community. The Redgranite Economic Development Committee is volunteer based. Table E-8, Appendix E contains a listing of economic development organizations and groups present in the county.

The Town of Mount Morris has little or no staff to engage in the activities listed below. However, the Tri-County regional Development Corporation and the Waushara County Economic Development Corporation will be able in certain instances to offer assistance in some of these areas.

***Business attraction involves the promotion of community assets***. For example, some of the activities that are involved in a business attraction program include:

- Providing information about available commercial/industrial sites
- Identifying labor and community characteristics
- Marketing sites to businesses that would be complementary to existing businesses or would provide diversity to the local economy
- Offering low cost land, state or federal grants or other incentives to encourage businesses to locate in the community

***Business retention is very important in that it is a relationship building effort between the community and already present local businesses.*** Activities associated with business retention programs include:

- Helping businesses learn about potential sites for expansion, offering low cost loans and identifying state and federal grants to finance business expansions
- Providing business areas with reliable, efficient public services such as snow removal, road repair, sewer/water utilities, and technology infrastructure
- Providing a contact person to answer business questions and to serve as a resource for business leaders regarding future business development

[7] UW – Extension Waushara County, 2005. *Economic Development Organizations*. http://www.uwex.edu/ces/cty/waushara/cnred/ed/organizations.html.

- o Partnering with organizations to support the development of a qualified, educated and trained workforce

## Economic Strengths and Weaknesses

By developing a set of strengths and weaknesses, the Town of Mount Morris is better prepared to develop an economic development strategy. ***These strengths and weaknesses are listed below.***

### *Strengths*

- Proximity to the City of Wautoma
- Natural Areas, Open Space, and Recreational Opportunities
- Prime Agricultural Soils
- Strong agricultural economy

### *Weaknesses*

- Lack of diversity in economic base
- Lack of population density is a deterrent for service and retail businesses
- Distance from urban centers

Although new development is highly encouraged, it must exist in harmony with the local environment. It should not compromise the natural resources or the historical and cultural components of the area. New development should blend into the rural landscape and complement existing development.

## Commercial and Industrial Design

***Site review procedures and design standards can be used to improve the quality of design and to promote the individual identity for a community.*** Specific standards regarding commercial building design, lot layout, building materials, parking, landscaping, and preservation of sensitive natural resources where necessary can be created so that developers have a clear understanding of the requirements they need to meet in order for their project to receive approval. Communities should consider applying site plan review to all commercial and industrial buildings. This ensures that downtown areas and other planned development are designed in a manner consistent with the vision of the local community comprehensive plans.

In addition to design standards, restrictive covenants are another tool business and industrial parks can use. The use of restrictive covenants enables communities to develop business parks with quality buildings and businesses. Covenants also serve to protect the investments of businesses that choose to locate in these parks.

## Infill and Brownfield Redevelopment

Brownfield's are sites where development or redevelopment is complicated by real or perceived hazardous substances, pollutants, or contamination. Knowing the location of Brownfield's and the extent of pollution greatly improves the likelihood that these sites will be redeveloped.

***The Wisconsin Department of Natural Resources Bureau of Remediation and Redevelopment maintains a listing of Brownfield's and contaminated sites. This website lists one entry for Mount Morris in Waushara County.*** These entries are classified in the following six categories: Environmental Repair (ERP), Leaking Underground Storage Tank (LUST), Spills, General Property Information (GP), Liability Exemption (VPLE) and No Action Required by RR Program (NAR). Statuses include Closed, Historic, Open, General Property and No RR Action Required. Closed is defined as "Activities where investigation and cleanup of the contamination has been completed and the State has approved all cleanup actions." Open is defined as "Spills, LUST, ERP, VPLE and Abandoned Container activities in need of cleanup or where cleanup is still underway". Historic is defined as "Spills where cleanups may have been completed prior to 1996 and no end date is shown." General Property is defined as "Liability exemptions, liability clarifications, etc. to clarify the legal status of the property." No RR Action Required is defined as "There was, or may have been, a discharge to the environment and, based on the known information, DNR has determined that the responsible party does not need to undertake an investigation or cleanup in response to that discharge." ***The site listed in Table 6-7 is closed.*** A listing of Brownfield and contaminated sites is available from the Wisconsin Department of Natural Resources (WDNR) Bureau for Remediation and Redevelopment. A tracking feature is available at their website.[8] The sites below were identified for Mount Morris.

Waushara County and its communities should complete and maintain an inventory of existing vacant buildings and land identified as "Brownfields". This information could be used to encourage infill development and redevelopment opportunities that take advantage of existing infrastructure and services and removes blight created by vacant and dilapidated buildings and parcels. Once identified, State and federal programs could be used to further study, clean, and redevelop these Brownfields.

Funding resources are listed at the end of the chapter for remediation of contaminated sites. To prevent future environmental damage, the Town of Mount Morris should encourage environmentally friendly businesses that are properly permitted and regulated to protect the soil and groundwater. This is particularly critical in areas that depend on private wells for drinking water.

**Table 6-7. WDNR Remediation Sites**

| Activity Name | Address |
|---|---|
| PHEIFER BROTHERS | HWY 152 MOUNT MORRIS TN |

*Source: WDNR BRRTS 2008*

[8] Wisconsin Department of Natural Resources. 2005. Remediation and Redevelopment Tracking System. http://botw.dnr.state.wi.us/botw/Welcome.do

## Key Findings

### *Educational Attainment*

- A higher percentage of residents in the Town of Mount Morris (43.5%) received high school diplomas than the State of Wisconsin (34.6%).
- A person with a bachelor degree can expect to earn $2.1 million over the course of a career, nearly double what the expected earnings are for a high school graduate.

### *Labor Force*

- Labor force growth rates for Town of Mount Morris (71.9%) dramatically exceeded Waushara County (29.4%), and the State (14.0%) growth rates between 1990 and 2000.

### *Economic Base Information*

- The manufacturing (20.0%); education, health, social services (19.4%), construction (9.7%), and public administration (9.1%) industries employed over half (58.2%) of workers in the Town of Mount Morris in 2000.
- The top three occupations for Town of Mount Morris workers in 2000 were management, professional, and related occupations (33.1%); sales and office occupations (21.5%); and production, transportation, and material moving occupations (18.7%).

### *Travel Time to Work*

- On an average, residents from the Town of Mount Morris, Waushara County and the state spent less than 30 minutes traveling to and from work in 1990.
- In 1990, average commute times for residents was 24.1 minutes in the Town of Mount Morris.
- In 2000, average commute times for residents from Mount Morris was 32.4 minutes.

### *Location of Workplace*

- Town of Mount Morris residents were more dependent on Waushara County for employment; a total of 71.9 percent of the residents from the Town of Mount Morris worked in Waushara County in 1990.
- The largest share of residents from the county (52.5%) and the Town of Mount Morris (64.6%) continued to work in Waushara County.
- About 52 percent of workers found employment locally in the County, working in the City of Wautoma, Town of Wautoma, Village of Wild Rose and the Town of Mount Morris.

### *Employment Forecast*

- It is anticipated that the largest increases will be seen in the education and health services sector.

- While the state is expected to see the highest increases in this area, employment opportunities in Waushara County may differ.

### *Industrial Park Information*

- There are no industrial parks in the Town of Mount Morris.

### *Business Retention and Attraction*

- Tri-County Regional Development Corporation (TCREDC) is a partnership between Waushara County and Marquette and Green Lake counties.
- The Waushara County Economic Development Corporation, run by a board of volunteers, is working to foster new business development, and support and sustain existing businesses throughout the county.
- Business attraction involves the promotion of community assets.
- Business retention is very important in that it is a relationship building effort between the community and already present local businesses.

### *Economic Strengths and Weaknesses*

- Economic strengths generally include the Town of Mount Morris's location, natural areas, open space, recreational opportunities, prime agricultural soils, strong agricultural economy. Weaknesses include low population density and lack of economic diversity.

### *Commercial and Industrial Design*

- Site review procedures and design standards can be used to improve the quality of design and to promote the individual identity for a community.

### *Infill and Brownfield Redevelopment*

- The Wisconsin Department of Natural Resources Bureau of Remediation and Redevelopment maintains a listing of Brownfield's and contaminated sites. This website lists one entry for the Town of Mount Morris in Waushara County.
- The site listed in Mount Morris is closed.

## INTERRELATIONSHIPS WITH OTHER COMPREHENSIVE PLAN ELEMENTS

### Housing

Economic growth will generate more jobs and, consequently, a need for greater housing availability and choices. These choices should reflect the needs of an area. For example if economic growth results in lower wage service sector jobs (retail, leisure, hospitality, and food services) and pay remains at the minimum wage level, housing affordability may become a concern. Therefore it is essential that a balanced mix of well designed housing types of various sizes and prices be available for all income levels. Affordable housing is also an important component of an economic development strategy, as it helps ensure an adequate labor force supply.

## Transportation

Facilitating commerce in the area and state is the function of the transportation system. Adequate access to the transportation system is essential to the economic success of the area. Businesses must have the ability to ship and receive goods quickly and economically. Access to and visibility of the business facility may be crucial for both customers and employees. Businesses in different locations may need different transportation accommodations. For example businesses in downtown areas may value on-street parking and pedestrian accommodations more than businesses in a more rural setting.

## Utilities and Community Facilities

A vital, safe, clean and healthy environment is an economic draw for new industry and residents. It aids in the retention of existing residents and businesses. Parks and green space add to the local economy by maintaining or increasing property values; providing a place where local citizens can socialize, play sports or relax; and promoting healthy active lifestyles that encourage physical activity. In addition, local parks and recreational facilities draw visitors to an area. These visitors spend money at local restaurants, motels and businesses.

A good educational system has the ability to respond to the ever changing job market, to educate or retrain the residents of an area and to form partnerships between business and schools.

Citizens, businesses and industries need accessible, reliable, and affordable gas and electric services. To enable economic growth and open up new markets and opportunities for diverse and innovative services, access to fast, reliable, cost effective, and cutting edge telecommunications must be available.

## Agriculture Resources

Agriculture and agricultural related industries have been and are still important to the economy of Waushara County. One of the many challenges facing Waushara County and the state is the preservation of prime agricultural soils and the farming industry as more farms are converted out of farming and into other uses. Additionally, the future of family farms is a concern as fewer children are choosing to take over farming operations. Reasons given for this include time commitments, cost of entry and the inability to make a living solely from farming. To remain competitive, farmers working with others in the county may want to explore opportunities for industry cluster development. A cluster, which is a geographical group of interconnected companies or associations in a particular field, can include product producers, service providers, suppliers, educational institutions and trade associations. As part of this effort, specialty and organic crops and livestock, along with support industries could be expanded in the area. Communities could also explore programs that match outgoing farmers with individuals who want to farm.

## Natural Resources

Although economic benefits can accrue from both consumptive and non-consumptive uses of natural resources, balancing the demands of economic development with the preservation of natural resources is a challenge. Conserving these resources is necessary to maintain and in

some cases improve the quality of life for residents while providing an attraction tool for new businesses and workers. Given the importance of tourism in the county, protection of the area's natural resources is essential. However, communities should be aware of the economic trade-offs between sectors. These trade-offs include long term intrinsic values versus current economic gain; high wages versus low wages; informed decisions versus short term economic gains; and actual protection and preservation versus aesthetics.

### Cultural Resources

Buildings dating back to the early 1900's can be found throughout Waushara County. These buildings along with artifacts tell the story of the county and the area. This rich history includes the early Native American habitation, the quarrying of red granite, and the development of the communities that make up the county. While the promotion of economic development is important, special care must be taken to preserve not only the character but the historical and cultural elements that remain today. Positive economic benefits can be realized by preserving these elements to provide a charming setting for businesses and communities that evokes a feeling in people's minds of a time or era when things were simpler, peaceful and more welcoming. It may also draw people to an area to explore their culture and/or identity.

### Land Use

The development of land can impact the value of land as well as the quality of life within the community. Ideally, the siting of commercial and industrial land uses should have minimal environmental impacts and be located near the necessary infrastructure. Redevelopment of abandoned buildings and areas contribute to the economic vitality of the area.

### Intergovernmental Cooperation

Economic development goes beyond municipal and county borders. Commercial and industrial development as well as sporting, tourism and other activities in one community will impact others. This business may also generate a support industry elsewhere in the county. Working in partnership, communities and the county can promote the amenities of the area that contribute to a high quality of life; work to form industrial clusters that involve producers, service providers, suppliers and education; and promote other things that are important to the economic development of the area such as agriculture, organic and specialty crop production, biomass, and forest products.

## POLICIES AND PROGRAMS

### Regional, County and Local Policies

#### *Regional*

**East Central Wisconsin Regional Planning Commission.** East Central has recently completed a regional comprehensive plan. As part of this planning effort, East Central has adopted five core economic development goals:

- Promote the expansion and stabilization of the current economic base and employment opportunities, while working to promote a positive, growth oriented, entrepreneurially supportive image to attract new business and create additional employment.
- Increase the awareness of on-going collaborative economic activities in the area to ensure maximum benefit to the regional economy.
- Create better relationships between political representatives and the business and educational sectors to effectively link and apply research, development, and technology to production processes, as well as to ensure an appropriately trained workforce.
- Encourage planning to guide community development to maximize the use of existing infrastructure, facilitate the provision of shared resources, minimize costs and environmental impacts, and promote a sense of place and healthy communities.
- Promote the economic benefits of natural resources, parks and recreation.
- Assess options to increase the viability of family farms.

**NorthEast Wisconsin (NEW) Economic Opportunity Study.** Waushara County participated in the NEW Economic Opportunity Study.[9] The NEW Study is a multi-jurisdictional partnership intending to further connect workforce development issues with economic development goals. Even before the economic downturn, the northeast region of Wisconsin experienced declines in its strong manufacturing sector employment levels and these negative changes in many cases have continued. The Fox Valley Workforce Development Board initiated a study to address these negative trends and to present recommendations to change the direction of the northeast Wisconsin economy. In addition to Waushara County, the study area is composed of the following 16 counties: Brown, Calumet, Door, Fond du Lac, Green Lake, Kewaunee, Manitowoc, Marinette, Marquette, Menominee, Oconto, Outagamie, Shawano, Sheboygan, Waupaca, and Winnebago Counties.

The five strategies developed for the NEW Economic Opportunities project are:

- *Strategy I – Move to a New Economy Construct*
  The New Economy building blocks are brain power, risk capital, technological innovation, and entrepreneurship. These New Economy building blocks must be incorporated within the mindset of abundance theory. Business, labor, government, education, and the communities across NEW must all work actively together under a common vision to harness the resources available within the region (and some outside the region) to drive future economic growth.
- *Strategy II – Move to a Collaborative Economic Development Construct*
  NEW must abandon the economic strategy of a cost race to the bottom and embrace the concept of abundance theory – that by collaborating, the pie will increase with everyone getting a larger piece. This is best and most efficiently accomplished through proactive collaboration across all sectors in the region – business, labor, government, education, and the general populace.
- *Strategy III – Change Social and Cultural Mindset to Risk and Collaboration*
  Proactive collaboration will require an opening up of the region's mindset both socially and culturally. Cultural diversity is a key to the melding of fresh ideas, best practices, and collaboration. It is what has worked in the country and the region in the past and it will be what works in the future.

[9] NorthStar Economic, Inc. 2004. *Northeast Wisconsin Economic Opportunity* Study. http://www.neweconomyproject.org/Pages/NEWEconStudy.htm.

- *Strategy IV – Change Regional Image*
  NEW and much of the greater Midwest has an image of being a wholesome but dull place. It is perpetuated by the national press and exists in the mindsets of Hollywood and Wall Street. That image is somewhat internalized, but also generally accepted by businesses and worker talent outside the region, making it difficult to retain and attract talent to the region. NEW must also develop both an internal and external image that promotes the resource and lifestyle benefits in the region. Inventorying and promoting the richness of the region's assets will help to retain and attract businesses and workers to NEW.
- *Strategy V – Promote Industry Cluster Development*
  This strategy addresses clusters, or a concentration of industries, that have potential for the area based on current industries and their expansion. Waushara County is a part of the Fox Valley Rural Sub-Region and for this sub-region the study recommended the possibility of building a biomass refinery that would use wood and other agricultural products to supply power to local foundries and other users be considered. The study suggests collaboration on food production and processing, safety, and packaging cluster. Specialty and organic crops and livestock should be expanded for farmers in this area.

**Lake Winnebago Anglers' Survey.** Researchers from UW-Extension, UW-Green Bay, UW-Madison, and the Wisconsin Department of Natural Resources (WDNR) recently completed the Lake Winnebago Anglers' Survey.[10] This study examined the economic impact of the Lake Winnebago Pool Lakes fisheries. The study area was defined as the entire pool lake system within the five county region surrounding the Winnebago system (Calumet, Fond du Lac, Outagamie, Waushara, and Winnebago counties). Only fishing trips from the mouth of the Wolf River on Lake Poygan southward to the mouth of the Upper Fox River were considered in this study. An extensive 12-page survey was mailed to a stratified sample of tournament anglers, anglers within the five-county region, anglers statewide, and out-of-state anglers randomly selected from the WDNR ALIS license database. The survey asked specific questions on anglers' fishing habits and preferences, fishing equipment replacement costs, fishing excursions on the Winnebago system, expenditures on these excursions, and attitudes towards current fisheries management practices.

Researchers concluded that:

- Over 1.1 million fishing trips were made on the Lake Winnebago system in 2005.
- 41% of these trips were made by local anglers within the five county region.
- The typical angler from out of the region spent $273 per day, while out-of-state and tournament anglers spent $755 and $469, respectively.
- Conservative estimates indicate that anglers from outside of the five county region contributed $147.5 million in direct spending in the region.
- Researchers found that spending generated from fishing created an additional $73.9 million dollars in indirect and induced spending.

Indirect spending is defined as increased sales among businesses in different sectors. For example, increased sales at a local bait and tackle shop may lead to an expansion of the store size; the bait shop will use the increased revenue to buy building materials from a hardware

[10] UW – Extension and UW – Green Bay. 2005. Lake Winnebago Angler Survey. http://www.uwex.edu/ces/cty/winnebago/cnred/documents/finalinitialdatapressrelease063006.doc.

store. Induced effects result from increased buying power of local employees from the pay raises received.

This study emphasized the true importance of the Lake Winnebago system and the economic implications that a quality natural resource base can have on local communities. The direct revenues generated by fishing were greater than several major events or tourist attractions in the area including the annual EAA Fly-in ($80 million), Country USA ($23 million), or the Green Bay Packer Lambeau Field Atrium Complex ($144 million). Unlike week-long festivals, fishing generates revenues for local businesses throughout the year.

Furthermore, this study will have important ramifications on local land use policies throughout the region. Due to the economic importance of the Winnebago fisheries, local policy makers should continue to address land use issues which have the potential to adversely affect water quality and aquatic wildlife habitat within shoreland areas. Development practices that increase shoreland protection and promote erosion control should be implemented. Since only 10 percent of the population lives on the lakeshores, public access will continue to be a major issue. Providing adequate boat ramps, parking areas, shoreline fishing piers, and handicapped accessible facilities will ensure more people have access to this unique fishery. Since these issues must be addressed within the context of current budgetary constraints, it may be necessary to address how user fees can better contribute to the management of the fishery as well as improving public infrastructure. Creative solutions will be needed to incorporate natural resource policies that enhance the Winnebago system fisheries and complement local economic development and revitalization projects.

## Federal, State and Regional Programs

### *Federal Agencies*

Some communities in Waushara County meet the requirements of the US Department of Agriculture-Rural Development and may be eligible for Rural Development Economic Assistance Programs. However, there are typically strict income limits associated with some of the programs so the Wisconsin Division of USDA-Rural Development should be contacted regarding eligibility for certain programs. A complete listing of USDA-Rural Development Programs can be found at http://www.rurdev.usda.gov/wi/programs/index.htm. Grants are also available through the US Department of Labor and can be found at http://www.doleta.gov/sga. A partial list is given below.

**Rural Business Opportunity Grants.** The Rural Business Opportunity grant program promotes sustainable economic development in rural communities with exceptional need. Grants typically fund projects that will become sustainable over the long term without continued need for external support. These projects should have the ability to serve as a local catalyst to improve the quantity and quality of economic development within a rural region. Grant funds can be used for technical assistance to complete business feasibility studies, conducting training for rural managers and entrepreneurs, establishing business support centers, conducting economic development planning, and providing leadership training. Information regarding the Rural Business Opportunity Grant Program can be found at http://www.rurdev.usda.gov/wi/programs/rbs/opportun.htm.

**Rural Economic Development Loans and Grants**

Rural Economic Development Loans and Grants help develop projects that will result in a sustainable increase in economic productivity, job creation, and incomes in rural areas. Projects may include business start-ups and expansion, community development, incubator projects, medical and training projects, and feasibility studies. Information regarding Rural Economic Development Loans and Grants can be found at http://www.rurdev.usda.gov/wi/programs/rbs/economic.htm.

**Susan Harwood Training Grants Program.** These training grants are awarded to nonprofit organizations for training and education. They can also be used to develop training materials for employers and workers on the recognition, avoidance, and prevention of safety and health hazards in their workplaces. Grants fall into two categories; Target Topic Training and Training Materials Development. The Target Topic Training grants are directed towards specific topics chosen by OSHA. Follow-up is required to determine the extent to which changes were made to eliminate hazards associated with the chosen topic. The Training Materials Development grants are specifically aimed at creating classroom quality training aids. Aids which are developed under the grant program must be ready for immediate self-study use in the workplace. Information regarding the Susan Harwood Training Grant Program can be found at http://www.osha.gov/dcsp/ote/sharwood.html.

**Community-Based Job Training Grants.** Community-Based Job Training grants (CBJTG) seek to strengthen the role of community colleges in promoting the US workforce potential. The grants are employer-focused and build on the President's High Growth Job Training Initiative. The primary purpose of the CBJTG grants is to build the capacity of community colleges to train workers to develop the skills required to succeed in high growth/high demand industries. Information regarding the Community Based Job Training Grants can be found at http://www.doleta.gov/business/Community-BasedJobTrainingGrants.cfm.

**H-1B Technical Skills Training Grant Program.** The H-1B Technical Skills Training Grant program provides funds to train current H-1B visa applicants for high skill or specialty occupations. Eligible grant applicants include local Private Industry Councils and Workforce Investment Boards that were established under the Workforce Investment Act. Eighty percent of the grants must be awarded to projects that train workers in high technology, information technology, and biotechnology skills. Specialty occupations usually require a bachelor's degree, and an attainment of this degree is strongly encouraged. The program is designed to assist both employed and unemployed American workers acquire the needed technical skills for high skill occupations that have shortages. Information regarding the H-1B Technical Skills Training Grant program can be found at http://www.doleta.gov/h-1b/html/overv1.htm.

### *State of Wisconsin*

There are many state programs that communities can consider utilizing to meet their stated goals and objectives. While not an all inclusive list, there are several programs that communities should strongly consider and are addressed below. Wisconsin Department of Commerce area development managers assist business expansions, promote business retention, and help local development organizations in their respective territories. Area development managers (ADM) use their knowledge of federal, state, and regional resources to provide a variety of information to expanding or relocating firms. They also mobilize resources to help struggling businesses. Local economic development practitioners can turn to area

development managers for assistance with long-term marketing and planning strategies. Waushara County is in Region 3. The ADM is Deb Clements and she can be reached at 715/344-1381 or via email at dclements@commerce.state.wi.us.

**Wisconsin Main Street Program.** The Main Street Program is a comprehensive revitalization program designed to promote the historic and economic redevelopment of traditional business districts in Wisconsin and is administered by the Wisconsin Department of Commerce – Bureau of Downtown Development. Communities are selected to participate on an annual basis and are judged on a submitted application. These communities receive technical support and training needed to restore their Main Streets to centers of community activity and commerce. Details regarding the Wisconsin Main Street Program can be found at http://commerce.wi.gov/cd/CD-bdd.html.

**Community Based Economic Development (CBED) Program.** The Community-Based Economic Development (CBED) Program provides financing assistance to local governments and community-based organizations that undertake planning or development projects, or that provide technical assistance services that are in support of business (including technology-based businesses) and community development. The program provides grants for planning, development, and assistance projects; Business Incubator/Technology-Based Incubator; a Venture Capital Fair; and Regional Economic Development Grants. Additional information regarding the CBED program can be found at http://www.commerce.wi.gov/cd/CD-bcf-cbed.html.

**Community Development Block Grant for Economic Development (CDBG-ED).** The CDBG-ED program is designed to assist businesses that will invest private funds and create jobs as they expand or relocate to Wisconsin. The Wisconsin Department of Commerce would award the funds to the community, which then loans the funds to a business. When the business repays the loan, the community may retain the funds to capitalize a local revolving loan fund. This fund can then be utilized to finance additional economic development projects within the community. Communities may also utilize the existing Waushara County Economic Revolving Loan Fund to provide loans to community businesses. Additional information regarding the CDBG-ED program can be found at the following website: http://commerce.wi.gov/BD/BD-RLF.html.

**Early Planning Grant Program (EPG).** The EPG program is designed to help individual entrepreneurs and small businesses throughout Wisconsin obtain the professional services necessary to evaluate the feasibility of a proposed start up or expansion. Under the EPG program, the Wisconsin Entrepreneurs' Network (WEN) – with funding from the Wisconsin Department of Commerce – can provide applicants with a grant to help cover a portion of the cost of hiring an independent third party to develop a comprehensive business plan. The maximum funding available for Early Planning Grants is 75% of eligible project costs up to $3,000. Additional information regarding the EPG program can be found at the following website: http://wenportal.org/grant_applications/epg_help.html.

**Milk Volume Production (MVP) Program.** The Milk Volume Production (MVP) program is designed to assist dairy producers that are undertaking capital improvement projects that will result in a significant increase in Wisconsin's milk production. This program was created to aggressively support Wisconsin's $20 billion dairy industry. The goal of the MVP program is to provide qualifying dairy producers with the type of financing necessary to fill the "equity gap"

and to partner with local communities to increase dairy production in Wisconsin. It is important to note that the MVP application process is competitive, and not all applications will be funded. Only those projects that have a comprehensive business plan and can demonstrate that they will have a long-term sustainable impact upon Wisconsin's milk production will be successful. Information regarding the Milk Volume Production (MVP) Program can be found at http://commerce.wi.gov/BD/BD-AG-MilkVolumeProduction.html.

**Dairy 2020 Early Planning Grant Program.** The Dairy 2020 Early Planning Grant Program is specifically designed for small Wisconsin dairy farms. Professional assistance can help keep smaller operations profitable and competitive in the agricultural industry. Information regarding the Dairy 2020 Early Planning Grant Program can be found at http://commerce.wi.gov/BD/BD-AG-Dairy2020EPG.html.

**Customized Labor Training Program (CLT).** The CLT program provides a matching grant to assist companies which are utilizing new technologies or manufacturing processes to train employees on new technologies. Grant recipients must either expand an existing or build a new facility within the state. The grants help Wisconsin's manufacturers remain on the cutting edge of technological innovation. Eligible expenditures must focus on the continuing technological education of employees. Grants can cover employee wages, training materials, and trainer costs. Grants provide up to $2,500 per trainee. Information regarding the CLT Program can be found at http://commerce.wi.gov/BD/BD-CLTprogram.html.

**Entrepreneurial Training Grant Program (ETG).** The ETG program provides potential new small business owners with partial tuition for attending the Small Business Center's (SBDC) Entrepreneurial Training Course. This course helps entrepreneurs prepare a comprehensive business plan that evaluates the feasibility of the proposed start up or expansion; identifies possible financing sources; and provides other information in regard to initial business start-up costs. Grants provide up to 75% of total tuition costs. Information regarding the ETG Program can be found at http://wenportal.org/grant_applications/etp_help.html.

**Business Employees' Skills Training Program (BEST).** The BEST program helps small businesses in industries that are facing severe labor shortages upgrade the skills of their workforce. This program provides applicants with a tuition re-imbursement grant to cover training costs. To be eligible, businesses must have 25 or fewer employees and sales of less than $2.5 million. In addition, businesses must specialize in automation, agricultural/food products, biotechnology, manufacturing, medical devices, paper/forest products, printing, tourism, or child care. All training must be provided by an independent third party. Information regarding the BEST Program can be found at http://commerce.wi.gov/BD/BD-BESTprogram.html.

**Industrial Revenue Bond Program.** The Industrial Revenue Bond program allows all Wisconsin municipalities to support industrial development through the sale of tax-exempt bonds. The proceeds from the bond sale are loaned to businesses to finance capital investment projects. Even though the bonds are issued by the municipality, the interest and principal are paid by the company. Information regarding the Industrial Revenue Program can be found at http://commerce.wi.gov/BD/BD-IRB.html.

**Transportation Economic Assistance (TEA) Program.** The state-funded Transportation Economic Assistance (TEA) program provides fast tract financing to construct rail spurs and port

improvements for new or expanding industries. The program is available through the Wisconsin Department of Transportation. Additional information regarding the TEA program can be found at the following website: http://www.dot.wisconsin.gov/localgov/aid/tea.htm

**Wisconsin Department of Commerce**

Listed below are additional Wisconsin Department of Commerce programs. This quick reference guide identified these programs and selected programs from other agencies. Commerce maintains a network of Area Development Managers to offer customized services to each region of Wisconsin.

**Brownfield's Initiative.** The Brownfields Initiative provides grants to persons, businesses, local development organizations, and municipalities for environmental remediation activities for Brownfield sites where the owner is unknown, cannot be located or cannot meet the cleanup costs. Contact Jason Scott, 608/261-7714.

**CDBG-Blight Elimination and Brownfield Redevelopment Program.** This program can help small communities obtain money for environmental assessments and remediate Brownfields. Contact Joe Leo, 608/267-0751.

**CDBG-Emergency Grant Program.** This program can help small communities repair or replace infrastructure that has suffered damages as a result of catastrophic events. Call 608/266-8934.

**Community Development Zone Program.** This program is a tax-benefit initiative designed to encourage private investment and job creation in economically-distressed areas. The program offers tax credits for creating new, full-time jobs, hiring disadvantaged workers and undertaking environmental remediation. Tax credits can be taken only on income generated by business activity in the zone. Call 608/267-3895.

**Freight Railroad Preservation Program.** The Freight Railroad Preservation Program provides grants to communities to purchase abandoned rail lines in the effort to continue freight rail service, preserve the opportunity for future rail service, and to rehabilitate facilities, such as tracks and bridges, on publicly-owned rail lines. Contact Ron Adams, Department of Transportation, 608/267-9284.

**Health Care Provider Loan Assistance Program.** This program provides repayment of educational loans up to $25,000 over a five-year period to physician assistants, nurse practitioner, and nurse midwives who agree to practice in medical-shortage areas in Wisconsin. The program is designed to help communities that have shortages of primary care providers and have difficulty recruiting providers to their area. Contact M. Jane Thomas, 608/267-3837.

**Minority Business Development Fund – Revolving Loan Fund (RLF) Program.** This program is designed to help capitalize RLFs administered by American Indian tribal governing bodies or local development corporations that target their loans to minority-owned businesses. The corporation must be at least 51-percent controlled and actively managed by minority-group members, and demonstrate the expertise and commitment to promote minority business development in a specific geographic area. Contact Mary Perich, 414/220-5367 or Bureau of Minority Business Development, 608/267-9550.

**Physician Loan Assistance Program.** This program provides repayment of medical school loans up to $50,000 over a five-year period to physicians who are willing to practice in medical-shortage areas in Wisconsin. The program is designed to help communities that have shortages of primary care physicians, and have had difficulty recruiting these physicians to their area. Contact M. Jane Thomas, 608/267-3837.

**State Infrastructure Bank Program.** This program is a revolving loan program that helps communities provide transportation infrastructure improvements to preserve, promote, and encourage economic development and/or to promote transportation efficiency, safety, and mobility. Loans obtained through SIB funding can be used in conjunction with other programs. Contact Dennis Leong, Department of Transportation, 608/266-9910.

**Tax Incremental Financing (TIF).** Tax Incremental Financing (TIF) can help a municipality undertake a public project to stimulate beneficial development or redevelopment that would not otherwise occur. It is a mechanism for financing local economic development projects in underdeveloped and blighted areas. Taxes generated by the increased property values pay for land acquisition or needed public works.

**Wisconsin Transportation Facilities Economic Assistance and Development Program.** This program funds transportation facilities improvements (road, rail, harbor, airport) that are part of an economic development project. Contact Dennis W. Leong, Department of Transportation, 608/266-9910.

**Freight Railroad Infrastructure Improvement Program.** This program awards loans to businesses or communities wishing to rehabilitate rail lines, advance economic development, connect an industry to the national railroad system, or to make improvements to enhance transportation efficiency, safety, and intermodal freight movement. Contact Ron Adams, Department of Transportation, 608/267-9284.

**Recycling Demonstration Grant Program.** This program helps businesses and local governing units fund waste reduction, reuse, and recycling pilot projects. Contact JoAnn Farnsworth, 608/267-7154, DNR.

**Wisconsin Fund.** The Wisconsin Fund provides grants to help small commercial businesses rehabilitate or replace their privately-owned sewage systems. Contact Jean Joyce, 608/267-7113.

### *Regional*

**East Central Wisconsin Regional Planning Commission.** The East Central Wisconsin Regional Planning Commission annually creates a Comprehensive Economic Development Strategy (CEDS) report, which evaluates local and regional population and economic activity. Economic development trends, opportunities, and needs are identified within the CEDS report. All communities, which are served by the Commission, are invited to identify future projects for economic development that the community would like to undertake. Those projects are included within the CEDS and may become eligible for federal funding through the Economic Development Administration (EDA) Public Works grant program. Additional information can be found at http://www.eastcentralrpc.org/planning/economic.htm.

**Northeast Wisconsin Regional Economic Partnership.** The combined Bay-Lake and East Central Wisconsin Regional Planning Commission areas were recently named as a Technology Zone by the Wisconsin Department of Commerce. The Northeast Wisconsin Regional Economic Partnership (NEWREP) Technology Zone provides $5 million in tax credits to businesses certified by commerce, based on a company's ability to create jobs and investment and to attract related businesses. The Technology Zone Program focuses primarily on businesses engaged in research, development, or manufacture of advanced products or those that are part of an economic cluster and knowledge-based businesses that utilize advanced technology production processes in more traditional manufacturing operations. Additional information can be found at http://www.eastcentralrpc.org/planning/economic.htm.

**CAP Services, Inc.** CAP Services Inc. (CAP) is a private non-profit corporation offering programs in Waushara, Marquette, Outagamie, Portage, Waupaca and parts of Marathon and Wood counties. The primary mission of CAP is to help low-income households attain economic and emotional self-sufficiency. Programs include Skills Training to help low-income individuals acquire skills to compete for higher paying jobs by assisting them with tuition, books, transportation and child care costs related to training; Business Development to provide entrepreneurs with the technical assistance, coaching advice and loan packaging they need to successfully start and grow their businesses; and Home Buyers Assistance to provide matching dollars to eligible low-and moderate-income, first-time homebuyers for down payment and closing costs. Funds are also available for repair and rehabilitation on newly purchased units; Weatherization measures including caulking, insulation, window repair and other conservation measures; Special Needs Housing; Asset Development to provide financial wellness training and incentives to low-income households; Preschool Services including head start for ages 3-5 and their families; and Crisis Intervention. Additional information can be found at www.capserv.org.

### *Private*

The Wisconsin Public Service Corporation (WPS) also contributes a number of economic development services that communities should be aware of for their businesses. WPS maintains an online database of available industrial buildings with information provided by the communities. The WPS economic development page can be a useful resource for communities, and can be accessed at http://www.wisconsinpublicservice.com/business/bcd.aspx.

# CHAPTER 7: INTERGOVERNMENTAL COOPERATION

## INTRODUCTION

The relationship a municipality has with school districts, neighboring communities, the county, the Regional Planning Commission, the state, and the federal government can impact residents in terms of taxation, planning, service provision, and siting of public facilities. An examination of these relationships and the identification of existing or potential conflicts can help a municipality address these situations in a productive manner.

## INVENTORY AND ANALYSIS

### Governmental Units and Relationships to Communities

#### *Communities*

***The Town of Mount Morris shares its borders with the towns of Wautoma, Rose, Springwater, Saxeville, Leon, Warren, Marion, and Dakota in Waushara County.***

#### *School Districts*

***The Town is served by both the Wild Rose School District and the Wautoma Area School District.*** While school districts are working with area communities, additional communication and cooperation can be done that will benefit both the school districts and the communities. This may include sharing recreational facilities, utilizing existing school facilities for after school meeting space, and working together to coordinate the siting and utilization of new school facilities. Communities, school districts and local businesses can also establish agreements to work together on other issues. This can include partnerships to construct local buildings (sheds, garages, houses) that not only give students valuable life and work skills but also benefit individuals within the local community. Community service type projects by local students strengthen young people's senses of civic engagement and have life long implications. Local governments and school districts should establish a method of communication and explore ways in which they can work together. Joint cooperation between school districts will allow the goals of the comprehensive plan to be met while providing safe, efficient transportation, community services, and related amenities.

Three school forests and a town forest provide 819 acres of passive open space in Waushara County. ***These facilities are open to the community and include the Tri-County School Forest (230 acres), the Wild Rose School Forest (128 acres), the Coloma School Forest (40 acres) and the Town of Rose Forest (421 acres). However, there are no school or town forests located within the Town of Mount Morris.***

The Town of Mount Morris is part of the Fox Valley District. Fox Valley Technical College has campuses in Appleton, Chilton, Clintonville, Neenah, Oshkosh, Waupaca, and Wautoma.

***Community Facilities***

***Due to the rural nature of Waushara County, many facilities and services are shared jointly between neighboring communities as well as provided through agreement with the county. Police protection for the Town of Mount Morris and the other communities within Waushara County is provided by the Waushara County Sheriff's Department that dispatches officers from the City of Wautoma.*** To provide a more visual presence in the area, the Hancock Fire Department serves as a satellite headquarters for the Sheriff's Department every Saturday afternoon. The Town of Mount Morris is served by four different fire departments/districts. The Wautoma Area Fire District covers the southwest quarter of the Town; the Redgranite Fire Department covers the southeast quarter of the Town; the Wild Rose Area Fire District covers the northwest quarter of the Town; while the Saxeville/Springwater Volunteer Fire Department covers the northeast quarter of the Town. ***In compensation for fire protection services, the Town of Mount Morris has a contract or agreement with the departments and pays a yearly fee or assessment.*** To better serve the three communities, the fire department maintains mutual aid agreements with Marquette, Adams, Portage and Waushara counties. ***Emergency medical services for the majority of the county are provided by the Waushara County EMS.*** An ambulance, shared jointly between the Coloma Fire Department and the Village of Plainfield, resides half time in the Village of Coloma and half time in the Village of Plainfield in alternating months, to improve service for the communities in the western part of the county. Finally, libraries within Waushara County are part of the Winnefox Federated Library System. The federated library system is designed to provide expanded library service to more people without making additional large expenditures. For this reason, libraries do not need to purchase the same collection materials or multiple copies since patrons are able to order materials from any library in the system.

Communication and coordination between communities and utility infrastructure providers (gas, electric, telephone, etc.), the WisDOT and the Waushara County Highway Department ensures that upcoming road construction and utility upgrades will run smoothly and that all work is done before restoration is completed. This lessons the chance that new road surfaces and restored terraces will need to be excavated shortly after construction is completed. Likewise, local governments, school districts and businesses working together on technological upgrades, ensure that these upgrades are made in concert without duplication of efforts so that a common goal can be achieved.

As indicated above, the Town of Mount Morris has various intergovernmental agreements with others in regard to public services and facilities. Communities should continue to look for ways that limited resources can be shared. New intergovernmental agreements which involve senior citizens and other social services; park and recreational facilities; stormwater management; or other topics may be issues that are explored in the future.

The Mount Morris town hall is located on STH 152 in the unincorporated village of Mount Morris. The Town also has a community center and about four acres of land located on the corner of CTH S and STH 152. The community center is a former school, which originally opened in 1957, closed in the late 1970s, and was acquired by the Town in 1991.

Meals along with activities and fellowship are provided to seniors at eight locations throughout Waushara County. The closest site is located at the Wild Rose Community Center, 500 Wisconsin Avenue in the Village of Wild Rose. This is one of eight sites located in Waushara County. All sites are open from Monday through Friday unless indicated otherwise. Participants must be age 60 or older, but a spouse and/or caregiver any age are welcome to participate as well.

### *County*

The Town of Mount Morris is located in Waushara County. ***The Town has adopted county zoning and has therefore given the county jurisdiction over zoning matters.*** However, the Town comments on and approves all proposed development within its jurisdiction before it approves any final action from the county. The Town of Mount Morris has given the County the authority to act as the permitting agent for on-site wastewater systems. ***Communities work with the various county departments to coordinate road construction and maintenance; solid waste and recycling efforts; senior citizen and other social services; and park and recreational facilities and programs.*** The communities and the County continue to maintain open communications with one another that work to foster good working relationships and mutual respect.

### *Region*

***Waushara County is a member of the East Central Wisconsin Regional Planning Commission*** (ECWRPC). ECWRPC provides planning and technical assistance to counties, communities, businesses, interest groups and individuals within its region. These services include environmental management, housing, demographics, economic development, transportation, community facilities, land use, contract planning, and others. ECWRPC has worked with the Town of Mount Morris over the years with the preparation of its community management plan.

### *State of Wisconsin*

**Wisconsin Department of Natural Resources (WDNR).** The WDNR is responsible for the regulation, protection, and sustained management of natural resources within the state. The WDNR operates various programs in water and air quality management, habitat preservation, recreational trail development, and other programs. The WDNR helps local landowners successfully manage their woodlots for wildlife habitat and timber production throughout Waushara County. The WDNR also maintains environmental corridors which enhance surface water quality and stream habitat throughout the planning area. The WDNR maintains a service center in the Wautoma Industrial Park.

**Department of Agriculture, Trade, and Consumer Protection (DATCP).** The overall mission of DATCP is multi-fold. The agency oversees programs which ensure the safety and quality of food, fair business practices for buyers and sellers, consumer protection, efficient use of agricultural resources in a quality environment, healthy animal and plant populations, and the vitality of Wisconsin agriculture and commerce. Since agriculture will continue to be an important economic industry within the area, many of the programs DATCP offers will benefit and help local citizens.

**Wisconsin Department of Transportation (WisDOT).** WisDOT deals with issues related to all transportation uses in the planning area. WisDOT evaluates existing transportation infrastructure for bicycle and pedestrian trails as well as assists in planning efforts for future trails. Additionally, WisDOT provides maintenance services for Interstate 39.

### Intergovernmental Comprehensive Planning Efforts

Periodically, representatives from various agencies, businesses and Waushara County (Wis DOT, WDNR, CAP Services, Waushara Area Chamber of Commerce, Waushara County Economic Development Corporation, Tri-County Regional Economic Development Corporation) should be invited to town board or plan commission meetings to talk and/or provide input into the implementation process.

### Laws, Ordinances and Regulations

**Cooperative Boundary Plans and Agreements.** Cooperative boundary plans and agreements are joint planning efforts in which two or more municipalities establish a mutually agreeable plan to establish boundary lines, provide public services and facilities, share revenues, and establish land use criteria.[1] The majority of municipal boundary agreements are conducted between a town and an incorporated village or city. Cooperative boundary plans, which are subject to a minimum of a ten-year period, must be approved by the Wisconsin Department of Administration.

**Extraterritorial Subdivision Regulation.** Incorporated villages and cities can exercise plat review authority in unincorporated areas adjacent to their communities,[2] however, only the City of Wautoma has effectuated this. This allows incorporated areas the same authority to approve or reject a specific plat or CSM as if it were within its own jurisdiction. This authority extends to a distance of 1.5 miles from the incorporated boundary for villages and small cities and 3.0 miles for cities with population of greater than 10,000. The incorporated area must have a subdivision ordinance in place in order to exercise this authority.

Cities and villages can work to ensure that land use conflicts be minimized near the incorporated boundaries. If the incorporated area has more restrictive guidelines than the adjacent town, the city/village can require that the subdivisions meet the more restrictive regulations. A plat can be rejected if it conflicts with a city/village ordinance, fails to comply with state statutes, or fails to comply with the city/village master plan.

**Extraterritorial Zoning.** Incorporated villages and cities have been given authority to practice extraterritorial zoning authority if they have developed a zoning ordinance for the incorporated areas.[3] Only the City of Berlin has effectuated this. This authority extends to a distance of 1.5 miles from the incorporated boundary for villages and cities with populations less than 10,000 and 3.0 miles for cities if the population exceeds 10,000. Extraterritorial zoning allows for smooth transitions between suburban and rural areas, reduces conflicting land uses, and promotes intergovernmental cooperation in planning for future community needs.

---

1 *Wisconsin State Statutes* s.66.0307.
2 *Wisconsin State Statutes* s.236.10.
3 *Wisconsin State Statutes* s.62.23.

Three major steps are involved in the adoption of an extraterritorial zoning ordinance.[4] First, the incorporated area must adopt and publicize a resolution to establish its intent to exercise its zoning authority within the extraterritorial area. Second, a joint committee with members from both the incorporated municipality and town must develop the specific zoning ordinance. Finally, the final plan must be adopted through the joint committee. The joint committee consists of three members from the city or village and three members from each affected town. This ensures that zoning cannot happen unless everyone agrees.

## Key Findings

### *Communities*

- The Town of Mount Morris shares its borders with the towns of Wautoma, Rose, Springwater, Saxeville, Leon, Warren, Marion, and Dakota in Waushara County.

### *School Districts*

- The Town is served by both the Wild Rose School District and the Wautoma Area School District.
- School and town forests are open to the community and include the Tri-County School Forest (230 acres), the Wild Rose School Forest (128 acres), the Coloma School Forest (40 acres) and the Town of Rose Forest (421 acres). However, there are no school or town forests located within the Town of Mount Morris.

### *Community Facilities*

- Due to the rural nature of Waushara County, many facilities and services are shared jointly between neighboring communities as well as provided through agreement with the county.
- Police protection for the Town of Mount Morris and the other communities within Waushara County is provided by the Waushara County Sheriff's Department that dispatches officers from the City of Wautoma.
- In compensation for fire protection services, the Town of Mount Morris has a contract or agreement with the departments (Wautoma Area, Redgranite, Wild Rose Area, and Saxeville/Springwater Volunteer) and pays a yearly fee or assessment.
- Emergency medical services for the majority of the county are provided by the Waushara County EMS.

### *County*

- The Town has adopted county zoning and has therefore given the county jurisdiction over zoning matters.
- Communities work with the various county departments to coordinate road construction and maintenance; solid waste and recycling efforts; senior citizen and other social services; and park and recreational facilities and programs.

[4] Ohm, B. 1999. *Guide to Community Planning in Wisconsin*.

### *Region*

- Waushara County is a member of the East Central Wisconsin Regional Planning Commission.

## INTERRELATIONSHIPS WITH OTHER COMPREHENSIVE PLAN ELEMENTS

### Economic Development

Communities should partner with community, county, and regional economic development groups; the local chamber of commerce; organizations such as CAP Services; state agencies such as Wisconsin Department of Commerce and UW-Extension; area school districts and technical schools; local businesses and others which promote economic development. Since the economy of the individual communities in western Waushara County is dependent on the economy of all the municipalities in the area, all communities within Waushara County and the Tri-County region must work together.

### Housing

Housing choices that reflect the needs of individual households are an integral part of comprehensive planning. Economic development professionals, housing providers, local government officials, county departments and consumers should work together to promote the development of housing that meets the needs of all income levels within the area. Communities should continue to work with and forge new ties with agencies such as CAP Services, United Migrant Opportunity Services (UMOS), the Federal Department of Housing and Urban Development, and private entities to ensure that an adequate amount of affordable housing is present.

### Transportation

Communities should work with WisDOT, Waushara County and ECWRPC to resolve local, regional and state transportation related issues. Roadway projects must be jointly coordinated with public utilities, local emergency rescue departments, community departments, school districts and others to ensure that repairs are made cost-effectively and on a timely basis.

### Utilities and Community Facilities

Coordination of road construction projects and utility upgrades can save everyone time and money. If a community is aware of a needed utility upgrade on a local street, they may also decide that it would be cost-effective for them to resurface the roadway after construction has occurred. Likewise, if a utility knows that a local road is going to be under construction, they may decide to upgrade their facilities at the same time.

Coordination of new school facilities is also vital. Communities need to plan for increased traffic, reuse of former buildings, and needed public infrastructure (roads, sewer, water, police and fire protection). Multi-use and extended use of buildings can also save the community money. A school facility is an ideal location to hold evening classes for adults, as well as recreational programs and public meetings. In some instances, school districts have worked

with communities to construct joint library projects and recreational facilities (swimming, gym and weight room).

Communities and the County should work together on joint and regional park and recreational programs and facilities. Some of the larger facilities such as a ski or tubing hill, ice rink and swimming pool maybe too costly for one entity to tackle alone. Moreover, the use of these facilities is not limited to the residents of one community but is usually enjoyed by the residents and visitors of the entire area. Countywide recreational leagues may also be something that can be investigated. One community alone may not have enough participation to field a sufficient number of teams to support league play, but with input from a number of communities in the area, this may become feasible. Some things that could be investigated may include soccer (adult and youth), baseball (adult and youth), volleyball, or others.

### Agricultural Resources

The economy and the character of the area are dependent on a viable agricultural community. Preserving productive agricultural land and maintaining a critical mass of farmers in the area to sustain the local agribusiness are tasks that can not be tackled alone. It will take input and support from communities, farmers, economic development groups, local agencies, and citizens alike.

### Natural Resources

Preserving the natural resources of the area is a joint effort. Natural resources do not stop at municipal boundaries. The actions and policies of one community impact the resources of another.

### Cultural Resources

The cultural and historical features of a community help define it. Preserving these resources that residents feel have made meaningful contributions to the community's heritage allows a connection to the past and an opportunity to pass this heritage onto future generations. Communities should work together to seek funding from the Wisconsin Historical Society to identify and evaluate historical, architectural and archeological resources in the area. Joint efforts should be made to ensure consistency between communities on planning related issues that affect cultural and historical resources. Finally, communities and the County should work together to educate citizens and elected officials about the importance of these resources and how they can be protected.

### Land Use

Land use brings the other elements together. The future land use map illustrates existing and future development based on the goals, objectives and strategies that each community has established. Land use decisions of one community have a direct impact on other communities. Communities should work together to jointly develop visions of how land along common borders should be developed or preserved. When new development or land divisions occur in these areas, joint input should be obtained before decisions are made.

## POLICIES

### State, Regional and County Policies

#### *State*

The Wisconsin Department of Natural Resources (WDNR) and the Wisconsin Department of Transportation (WisDOT) routinely engage in master planning for natural resource management and transportation purposes. The University of Wisconsin Extension office located in Wautoma serves as an educational resource for County residents.

Waushara County is located within the Northeast Region of the WDNR. The Northeast Region has a regional office in Green Bay and a service center in Wautoma. A master plan is developed for each property that WDNR owns. This plan establishes goals and objectives for how the property will be managed and developed.[5] In addition, the master plan delineates adjacent lands or related parcels that should be acquired in the future to expand the property. The master plan discusses not only the proposed future of the property, but also the benefits it will provide to local communities. In order for the WDNR master planning process to be effective, local participation from the affected communities is needed. All citizens affected by the WDNR owned land should consider becoming involved in the planning process or attending meetings related to the projects.

Waushara County is located within the North Central Region of the Wisconsin Department of Transportation (WisDOT). The North Central Region has regional offices in Wisconsin Rapids and Rhinelander. WisDOT has prepared several master plans specifically for various modes of transportation as well as a highway improvement plan.[6] Although the plans are adequate to 2020, these plans will be periodically updated. Additionally, the Connections 2030 Plan, currently in draft form, identifies nearby I-39 as an intercity bus network connecting Madison, Stevens Point, and Wausau.[7] The Town of Mount Morris should take a proactive role in all transportation planning processes in the future to ensure that, as existing transportation facilities are expanded to meet the existing and future needs of the individual communities, the planning area, Waushara County, and the State of Wisconsin, other local concerns are addressed.

#### *Regional*

**East Central Wisconsin Regional Planning Commission.** East Central Wisconsin Regional Planning Commission has completed all milestones in their regional comprehensive planning process. Communities should use the information identified in the first two milestone reports and review the goals set in the third milestone report.

[7] Wisconsin DOT. 2009. *Connections 2030 Plan, draft.* http://www.dot.wisconsin.gov/projects/state/connections2030.htm.

### *County*

**Waushara County Comprehensive Plan.** Waushara County is currently in the process of creating and adopting a smart growth comprehensive plan in accordance with s.66.1001. It is the responsibility of the Town of Mount Morris to actively participate in the county-wide plan and to promote the incorporation of their land use planning decisions into the overall Waushara County plan.

**Waushara County Land and Water Management Plan.** Waushara County has adopted a County Land and Water Management Plan. This plan was developed by the County Land Conservation Committee with assistance from a citizen advisory committee that included representatives from the WDNR, USDA Natural Resources Conservation Service, Central Wisconsin Windshed Partners, and Watershed Lakes Council. It is the responsibility of Waushara County communities to review and implement this plan within their respective jurisdictions.

# CHAPTER 8: LAND USE

## INTRODUCTION

Land use directly influences all the various elements presented in the previous chapters. Many aspects of daily life within the planning area are impacted by elements of the previous chapters. The choices for housing type, location, transportation alternatives, decisions on employment locations, recreational opportunities, and the quality of the man-made and natural environments are all intricately woven together into land use. Land use policy decisions can have far-reaching repercussions for factors including housing growth and the protection of natural resources. For example, rural areas in Waushara County are under pressure from scattered rural residential and vacation home development. Large lot development in rural areas has fragmented farmland and forests and place greater stress on the lakes, streams, and other environmentally sensitive areas.

This chapter describes existing land use patterns and current zoning ordinances. Development trends over the past 20 years were analyzed, and future land use needs were extrapolated. Finally, the chapter discusses the land use policy context and the need for additional intergovernmental cooperation. Several potential land use conflicts are identified, and issues that must be addressed are discussed.

## INVENTORY AND ANALYSIS

### Existing Land Use

***The Town of Mount Morris existing land use map was last updated in 2000.*** Land use information was compiled into the general land use categories summarized below and is presented in Table 8-1 and Exhibit 8-1. ***The land use categories are agricultural, residential, commercial, industrial, transportation, utilities/communications, institutional facilities, recreational facilities, water features, woodlands and other open land.***

### Land Use Categories

**Agricultural.** Agricultural land is broadly classified as land that is used for crop production. Agricultural uses include farming, dairying, pastures, apiculture (bees), aquaculture (fish, mussels), cropland, horticulture, floriculture, viticulture (grapes), and animal and poultry husbandry. Agricultural land is divided into two sub-categories: irrigated and non-irrigated cropland. Irrigated cropland is watered by artificial means, while non-irrigated cropland is watered by natural means (precipitation).

**Residential.** Residential land is classified as land that is used primarily for human inhabitation. Residential land uses are divided into single family residential, farmsteads, and multi-family residential and mobile home parks. Single family residential includes single family dwellings, duplexes, and garages for residential use. Within platted subdivisions, residential land use encompasses the entire lot. In rural areas where lots are typically larger, single family includes the primary residence, outbuildings, and the mowed area surrounding the structures. Single family also includes isolated garages and similar structures on otherwise undeveloped rural lots.

Farmsteads include the farm residence, the mowed area between the buildings and the associated outbuildings (barn, sheds, manure storage, abandoned buildings). Multi-family includes apartments of three or more units; condos; room and boarding houses; residence halls; group quarters; retirement homes; nursing care facilities; religious quarters; and the associated parking and yard areas. Mobile home parks are classified as land that is part of a mobile home park. Single standing mobile homes are classified under single family residential.

**Commercial.** Commercial land uses represent the sale of goods and services and other general business practices. Commercial uses include retail and wholesale trade (car and boat dealers; furniture, electronics and appliance stores; building equipment and garden equipment; grocery and liquor stores; health and personal care stores; gasoline stations; clothing and accessories, sporting goods, hobby, book and music stores; general merchandise; miscellaneous store retailers; couriers; and masseuse), services (publishing; motion picture and sound recording; telecommunications; information systems; banks and financial institutions; real estate offices; insurance agencies and carriers; waste management; accommodations; restaurants and drinking places; repair and maintenance; personal and laundry; social assistance, etc.) and other uses (warehousing and automobile salvage and junk yards).

**Industrial.** Industrial land uses represent a broad category of activities which involve the production of goods. Industrial is divided into two separate categories: industrial and quarries. Industrial uses include construction; manufacturing (includes warehousing with factory or mill operation); mining operations and quarries; and other industrial facilities (truck facilities).

**Transportation.** Transportation includes land uses that directly focus on moving people, goods, and services from one location to another. Transportation is divided into two separate categories: transportation and airport. Transportation uses include highway and street rights of way; support activities for transportation (waysides, freight weigh stations, bus stations, taxi, limo services, park and ride lots); rail related facilities; and other related categories. Airports included areas that are dedicated specifically to air traffic.

**Utilities/Communications.** Utilities and communications are classified as any land use which aids in the generation, distribution, and storage of electric power (substations and transformers); natural gas (substations, distribution brokers); and telecommunications (radio, telephone, television stations and cell towers). It also includes facilities associated with water distribution (water towers and tanks); water treatment plants; wastewater processing (plants and lift stations); landfills (active and abandoned); and recycling facilities.

**Institutional Facilities.** Institutional uses are defined as land for public and private facilities dedicated to public services. Institutional land uses include educational facilities (schools, colleges, universities, professional schools); hospitals; assemblies (churches, religious organizations); cemeteries and related facilities; all governmental facilities used for administration (city, village, town halls, community centers, post office, municipal garages, social security and employment offices, etc.); and safety services (police departments, jails, fire stations, armories, military facilities, etc.). Public utilities and areas of outdoor recreation are not considered institutional facilities.

**Recreational Facilities.** Recreational facilities are defined as land uses which provide leisure activity opportunities for citizens. This category encompasses both active and passive activities. Recreational activities include designated hunting and fishing areas; nature areas; general

recreational parks; sports facilities (playgrounds, ball diamonds, soccer fields, tennis courts, etc.); city, county and state parks; fairgrounds; marinas; boat landings; spectator sport venues; hiking trails; mini-golf; bowling; bicycling; skiing; golf courses; country clubs; performing arts centers; museums; historical sites; zoos; amusement parks; gambling venues; and other related activities.

**Water Features.** Water features include all surface water including lakes, streams, rivers, ponds, and other similar features. Intermittent waterways are also incorporated into this category.

**Woodlands.** Woodlands are forested areas which are characterized by a predominance of tree cover. Woodlands are divided into two subcategories: general woodlands and planted woodlands. General woodlands are naturally occurring; this category includes forests, woods, and distinguishable hedgerows. Planted woodlands include forestry and timber track operations where trees are typically planted in rows; this category includes tree plantations, orchards and land dedicated to Christmas tree production (nurseries are not included).

**Other Open Land.** This category includes land which is currently vacant and not developed in a manner similar to the other land use categories described within this section. Open land includes areas that are wet, rocky, or outcrop; open lots in a subdivision; or rural parcels and side or back lots on a residential property that are not developed.

### Current Land Use Inventories

Developed land has been altered from its natural state to accommodate human activities. Although agricultural areas are considered undeveloped by land classification systems, these uses have different impacts on land use decisions than urbanized uses; thus, agricultural uses have been separated to obtain an accurate total of all related activities.

***The Town of Mount Morris encompasses approximately 22,584 acres*** (Table 8-1, Figure 8-1 and Exhibit 8-1). ***Approximately nine percent (9.2%) of the total area is developed.*** The primary developed uses include Single Family Residential (37.8%), Transportation (32.1%), and Recreational Facilities (20.3%). Collectively these uses account for 90 percent (90.2%) of the developed area.

***Overall, woodlands (planted and unplanted) accounts for 63 percent (63.0%) of the total land use, while cropland (irrigated and non-irrigated) makes up another 13 percent (13.1%).*** Other open land (11.6%), and water features (3.0%) comprises the remaining 15 percent (14.6%) of the remaining land uses.

**Table 8-1. Town of Mount Morris Existing Land Use, 2000**

| Land Use | Total Acres | Percent of Developed Land | Percent of Total |
|---|---|---|---|
| Single Family Residential | 787 | 37.8% | 3.5% |
| Farmstead | 124 | 5.9% | 0.5% |
| Multi-Family Residential | 4 | 0.2% | 0.0% |
| Mobile Home Parks | 0 | 0.0% | 0.0% |
| Industrial | 6 | 0.3% | 0.0% |
| Recreational Facilities | 422 | 20.3% | 1.9% |
| Commercial | 19 | 0.9% | 0.1% |
| Institutional Facilities | 53 | 2.6% | 0.2% |
| Utilities/Communications | 0 | 0.0% | 0.0% |
| Transportation | 669 | 32.1% | 3.0% |
| **Total Developed** | **2,083** | **100.0%** | **9.2%** |
| Non-irrigated Cropland | 2,417 | | 10.7% |
| Irrigated Cropland | 547 | | 2.4% |
| Planted Woodlots | 4,135 | | 18.3% |
| Unplanted Woodlots | 10,094 | | 44.7% |
| Active Quarry | 5 | | 0.0% |
| Other Open Land | 2,624 | | 11.6% |
| Water Features | 678 | | 3.0% |
| **Total Acres** | **22,584** | | **100.0%** |

## Zoning

Zoning is a major tool used to regulate land uses. A zoning ordinance regulates the use of property in order to advance public health, safety, and welfare through orderly development. Zoning is performed at several levels in Waushara County. Each incorporated city or village has general zoning powers.[1] Waushara County has general zoning jurisdiction within most unincorporated areas of the county; the ordinances are administered by the Zoning and Land Conservation Department (WCZLC).[2] The Town of Mount Morris has adopted the general Waushara County Zoning ordinances. Towns with "village powers" can adopt their own zoning ordinances as long as they are at least as restrictive as the general county ordinance.[3]

### Waushara County

***The Town of Mount Morris adheres to Waushara County Zoning regulations.***[4] All zoning district information is contained within the Waushara County Zoning Ordinance adopted in 2003. A summary of the usage requirements and restrictions of the districts found within the area is listed below.

- *(A-G) General Agriculture Zone:* This zone is designed primarily for large-scale agricultural uses of land related to growing of crops and the raising of livestock. Permitted uses include airstrips, general farming, single family residential homes, home occupations, and other uses. Residential lot sizes vary. Minimum lot sizes are indicated by the suffix. For example, lots zoned AG-5 must be a minimum of 5 acres.

- *(A-R) Agricultural Residential Zone:* This zone is intended to provide a semi-rural type of environment which allows general agricultural use. Single family residential development on minimum one acre lots, general farming, and home occupations are permitted under this classification.

- (C-G) *General Commercial:* This zone provides for uses found in small commercial areas located throughout the county. Permitted uses include banking; bed and breakfast establishments; professional offices; medical clinics; funeral homes; laundromats; storage garages; restaurants; semi-public uses; warehouses; and retail stores. Single family dwellings are permitted only as accessory to a principal use.

- *(C-C) Community Commercial:* This zone provides for uses found in the central business districts of small communities. Permitted uses include banks, bed and breakfasts, professional offices, medical clinics, funeral homes, laundromats, storage garages, restaurants, semi-public uses, warehouses, and retail stores. Single family dwellings are permitted only as accessory to a principal use.

- *(C-S) Service Commercial:* This zone is designed for small commercial service businesses which are oriented toward the traveler, tourist or vacationer. Lots sizes must be a minimum

[1] *Wisconsin Statues* 62.23 for cities and *Wisconsin Statute*s 61.35 for villages.
[2] *Wisconsin Statues* 69.69.
[3] *Wisconsin Statues* 60.22.
[4] WCZLC. 2003. *Code of Ordinances: Waushara County, Wisconsin.*

of 10,000 square feet. Permitted uses include bed and breakfasts; boat sales and service; clubs or lodges; and public swimming pools.

- *(M-G) General Manufacturing Zone:* This zone is intended for any manufacturing or industrial operation which, on the basis of actual physical and operational characteristics, would not be detrimental to the surrounding area or the county as a whole by reason of noise, dirt, smoke, odor, traffic, physical appearance, or any other similar features. Automotive-heavy repair and upholstery; cleaning, pressing, and dying establishments; commercial bakeries, greenhouses, and recycling operations; distributors; farm machinery sales and/or service; food locker plants; laboratories; machine shops; manufacturing and bottling of nonalcoholic beverages; manufacturing, fabrication, processing, packaging, and assembly of selected products; printing or publishing; storage and sale of machinery and equipment; trade and contractors' offices; warehousing and wholesaling; offices, storage, power supply, and other such uses normally incidental to the principal use are permitted uses that fall under this classification. Lot sizes must be a minimum of 20,000 square feet.

- *(M-I) Intensive Manufacturing Zone:* This zone is intended to provide for uses which by their nature can exhibit characteristics harmful, noxious, or detrimental to surrounding uses. Permitted uses include all those permitted under General Manufacturing Zone, as well as freight yards and depots, breweries, and inside storage. Lot sizes must be a minimum of 20,000 square feet.

- *(O-N) Natural Resource Preservation Zone:* This zone provides for the conservation and protection of natural resources. Generally this zone includes swamps, marshlands, river and lakeshore and other land of natural aesthetic value. Residential development is a conditional use and is only allowed as an accessory to a principal use within these areas on one-acre lots. Permitted uses include agriculture, wildlife preserves, fish hatcheries, and farm ponds. Camping trailers, mobile campers, and houseboats are permitted for temporary living quarters within the district.

- *(GWPOD) Groundwater Protection Overlay District:* The purpose of this district is to institute land use regulations to protect the municipal water supplies and to promote the public heath, safety and general welfare of the residents of the county. The residents of the county depend exclusively on groundwater for a safe drinking water supply. Certain land use practices and activities can seriously threaten or degrade groundwater quality.

- *(O-F) Forest Zone:* This zone provides for the continuation of forestry practices and related uses in those areas best suited to this activity. This zone is further intended to encourage forestry and to recognize the value of the forest as a recreational resource. Permitted uses include all uses within the O-N zone; debarking operations; maple syrup processing plants; and portable sawmills. Single family dwellings are allowed as a conditional use. Residential lot sizes must be a minimum of one acre.

- *(O-P) Park and Recreation Zone:* This zone provides for the orderly and attractive grouping of recreational oriented service establishments and is further intended to encourage the maintenance and protection of natural resources. Permitted uses include all agriculture, wildlife preserves, fish hatcheries, and farm ponds. Camping trailers, mobile campers, and houseboats are permitted for temporary living quarters within the district.

- *(O-SW) Shoreland/Wetland Zone:* This purpose of this zone is to maintain safe and healthful conditions; to prevent water pollution; to protect fishing and spawning grounds and aquatic life; and to preserve shore cover and natural beauty.

- *(RS-10) Residential Single-Family:* This zone provides a suitable environment for single-family residential development on moderate size lots in areas with public sewer systems. Permitted uses include agriculture and single-family dwellings. The minimum lot size is 10,000 square feet.

- *(RS-*20*) Residential Single-Family Zone:* This zone is intended to provide a suitable environment for single-family residential development on large lots in areas without public sewage systems. Permitted uses include single-family residential lots of a minimum of 20,000 square feet and agricultural uses.

- *(R-M) Residential Multiple-Family Zone:* This zone provides for multiple-family dwellings in a residential environment. Permitted uses include single-family dwellings, duplexes, and multiple-family dwellings and duplexes. The regulations for this zone apply to multiple-family dwellings served by public sewer systems. Multi-family dwellings not served by a public sewer must have an approved septic system. Sewered lot sizes must be a minimum of 12,000 square feet.

- *(RS-P) Residential Single-Family Planned Development Zone:* The purpose of this zone is to provide the means whereby land may be planned and developed as a unit for residential uses under standards and conditions which encourage good design and promote a stable living environment.

- *(RM-P) Residential Multifamily Planned Development Zone:* The purpose of this zone is to provide the means whereby land may be planned and developed as a unit for residential uses under standards and conditions which promote a stable living environment. This zone is intended to permit flexibility and variety in development at increased densities, to encourage the preservation of natural features and open space, and to minimize present and future burdens on the community as a whole which result from poor planning.

Several generalizations can be made about zoning in the Town of Mount Morris (Table 8-2 and Exhibit 8-2). ***The predominant zoning district in the Town is General Agriculture. This category comprised 84.7 percent of the area in the Town of Mount Morris.*** Natural Resource Preservation comprises the next largest area in the Town. Natural Resource Preservation accounted for 4.3 percent of the total area in the Town of Mount Morris. Less than three percent (2.7%) of the Town is zoned for park and recreational uses.

**Table 8-2. Town of Mount Morris Zoning**

| Zoning Classification | Acres | Percent |
|---|---|---|
| General Agriculture (A-G) | 19,138 | 84.7% |
| Agricultural Residential (A-R) | 73 | 0.3% |
| General Commercial (C-G) | 12 | 0.1% |
| Community Commercial (C-C) | 0 | 0.0% |
| Service Commercial (C-S) | 1 | 0.0% |
| General Manufacturing (M-G) | 2 | 0.0% |
| Intensive Manufacturing (M-I) | 0 | 0.0% |
| Natural Resource Preservation (O-N) | 963 | 4.3% |
| Forestry (O-F) | 0 | 0.0% |
| Park and Recreation (O_P) | 605 | 2.7% |
| Shoreland / Wetland (O-SW) | 0 | 0.0% |

*Waushara County does not include roads in zoning data

## Development Trends

The growth and development of Waushara County has been influenced by a number of factors. These factors include the topography, the abundance of navigable surface waters, wooded lands and natural resources, the ability of the soils to support crops and the central location of the county in the state, and its proximity to the Fox Cities, Oshkosh, Stevens Point and Madison.

***The earliest inhabitants of Waushara County were Native Americans.*** Considerable evidence of their civilization has been found throughout the county and still exists today. The Whistler Mound group, in the Village of Hancock, is included on the National Register, but many other sites are still present in the county.

On October 18, 1846, the Menominee Tribe ceded their land, including Waushara County to the U.S. Government. ***By the late 1840's and early 1850's, farming communities centered around small villages and hamlets could be found in the county.*** Many of these communities were established along existing logging and old military roads, and at creek and river crossings. A typical early farming community usually included a tavern, sawmill, stage house (a place for overnight accommodations), church, houses and a few commercial establishments.

***In the 1880's, the county experienced a surge of activity with the coming of the railroad and the discovery of red granite.*** Overnight houses and businesses materialized in the Redgranite/Lohrville area as skilled workers, their families and others made Waushara

County their home. The boom ended in the 1920's as concrete replaced stone as the nation's preferred paving material.

***Today, agriculture and tourism has grown to become the county's major industries.*** While the county has seen a decline in the number of farms over the years, in 1997 over half of the county was taxed as farmland. Waushara County's 136 lakes make up about 7,000 acres of surface water. The greatest concentration of lakes is found among the moraines and drumlins in central and western portions of the county. These lakes, along with over 500 miles of rivers and streams and 185,000 acres of woodlots provide for a diversity of boating, fishing, hunting, hiking and other recreational opportunities.

Similar to other rural areas in the state, Waushara County has faced development pressures. ***Large portions of farm and woodlands are being converted to small parcel residential development.*** Easy access to STH 21 and the expansion of USH 10 has shortened the time/distance between Waushara County and the Fox Cities and Oshkosh. As a result, towns along the eastern tier have experienced growth in housing starts by people working outside the county. While communities along the western tier of the county, have closer ties to Stevens Point, Westfield and other areas along the I-39 corridor.

As growth occurs, land use changes in intensity and net density. Analyzing the patterns in land use provides valuable information to local communities in determining how the community has changed and assessing current needs. This information can be used to plan for the appropriate development in the future. To analyze land use changes, East Central Wisconsin Regional Planning Commission (ECWRPC) looked at a number of different data sources, including its own land use inventories of the area, revenue data from the Wisconsin Department of Revenue (DOR), and building permit records from the Wisconsin Department of Administration (DOA).

Several limitations with the information in the data sets necessitate utilizing general summaries for land use trends. A brief discussion of the limitations follows.

ECWRPC conducted land use inventories in 1980 and again in 2000. Two distinct classification systems were used in the 1980 and in 2000 and the subsequent land use updates. This made it difficult to compare specific categories between the two inventories. Secondly, computer technology has changed the degree of specificity in which data is collected. In 1980, computerized parcel data was not available. Current land use utilizes parcel data; therefore if a house is located in a subdivision, the entire parcel may be included as residential. Residential areas in 1980 may have included only a portion of these areas.

A comparison of Wisconsin Department of Revenue (DOR) data was used to analyze land use changes between 1990 and 2005[5] The DOR collects information by real estate class for each minor civil division in the state.[6] Acreage figures from DOR do not include Department of Natural Resource (DNR) lands or other tax-exempt properties.[7] Acreage data for incorporated communities is also incomplete, as their information is frequently provided in number of parcels, as opposed to the total acreage of the parcels. Beginning in 1996, the DOR also changed their classification system. Wisconsin Act 27 mandated that agricultural land was

[5] DOR. 1980. *1980 Statistical Report of Property Values Waushara County, Wisconsin.*
[6] DOR. 1990, 2000, and 2005. *Statement of Equalized Values.*
[7] DOR. 1990, 2000, and 2005. *Statement of Assessments.*

categorized from a standard based on use value instead of a standard based on full market value.[8] Therefore, some land use changes between 1990 and 2005 are a direct result of Act 27 and do not necessarily reflect a change in land use but a change in the way that the land was classified. Following the implementation of the use value standard, agricultural land with improvements was moved to other categories. If these improvements included residential, then the agricultural land with improvements was moved to residential. Additionally, following the use value assessment, less productive land was moved out of agriculture and reclassified as swamp and waste land. Furthermore, the increasing popularity of privately owned recreational land caused a shift of lands from agriculture to both forestland and swamp and wasteland.

The Wisconsin Department of Administration (DOA) collects building permit information for new construction as well as demolition information from communities within the state.[9] This data is annually reported by communities and includes single-family, two-family, multi-family and mobile homes. The data is an inventory of the net change in the number of residential units for each community that were reported to DOA. As stated above, this data set includes information that is reported by individual communities to the DOA. If a community does not accurately report its building permit information, it is infeasible to determine actual land use changes.

While the historical data from ECWRPC, DOR and DOA gives us an incomplete picture of the total amount of land historically devoted to the various land uses, it does give us a picture of land consumption patterns within the communities. According to these data sources, several trends can be seen. The collective summary utilizing all three sources is presented for each individual community, and general trends are discussed.

**Land Use Trends**

As stated above, some of the changes in land use trends utilizing ECWRPC data can be directly attributed to changes in technology and changes in the way land use data was categorized. To determine overall trends in land use between the 1980 and 2000 years the following land use categories were grouped together:

- Residential: Single family, multi-family, farmsteads, mobile homes, mobile home parks, duplex, group quarters, part-time and seasonal;
- Industrial: Industrial and quarries;
- Parks and Recreation: Parks, recreational activities, conservation and preservation areas, resorts and camps;
- Institutional Facilities: Educational, public assembly, government facilities, cemeteries, churches, hospitals, libraries and institutional;
- Cropland: Irrigated cropland, pastureland, and non-irrigated cropland; and
- Residual: Residual, streets, highways, water features, utilities, planted woodlots, unplanted woodlots, other open land and transportation.

After grouping the land use categories, certain trends were evident: ***residential, commercial, institutional facilities and industrial increased, while parks and cropland decreased between 1980 and 2000*** (Table 8-3). It should be noted that the creation of a 52 acre

[8] Wisconsin State Assembly. 1995. *Wisconsin Act 27 (Assembly Bill 150)*.
[9] Wisconsin Demographics Service Center. 1990 to 2004. *Annual Housing Units Surveys.*

church camp accounts for the drastic increase in institutional facilities. While the table below indicates acreage totals as collected by ECWRPC, due to changes in methodology, the reader should be looking at trends only that these numbers represent.

**Table 8-3. Land Use Trends (ECWRPC), 1980 to 2000**

| Existing Land Use | 1980 Acres | 2000 Acres | Change Acres | Percent Change |
|---|---|---|---|---|
| Residential | 541 | 914 | 373 | 69% |
| Commercial | 8 | 19 | 10 | 121% |
| Industrial | 7 | 11 | 5 | 72% |
| Parks and Recreation | 1,234 | 422 | -812 | -66% |
| Institutitional Facilities | 1 | 53 | 52 | 3708% |
| Cropland | 7,419 | 2,964 | -4,455 | -60% |
| Residual | 13,373 | 18,200 | 4,826 | 36% |
| Total | 22,584 | 22,584 | | |

*Source: ECWRPC: 1980 and 2001*

Even though land use trends utilizing Department of Revenue data does not include WDNR data or tax exempt properties, certain broad trends can be noted and correspond to trends apparent in the data from ECWRPC. ***Residential and commercial acreages are increasing, while agricultural acres are decreasing*** (Table 8-4). The difference in total acreage in the Town is related to the property that is tax exempt.

**Table 8-4. Land Use Trends (DOR), 1980 to 2005**

| Land Use | 1980 Acres | 1990 Acres | 2000 Acres | 2005 Acres | Percent Change 1980-1990 | Percent Change 1990-2000 | Percent Change 2000-2005 |
|---|---|---|---|---|---|---|---|
| Residential | 243 | 1,766 | 2,249 | 2,346 | 627% | 27% | 4% |
| Commercial | | 32 | 44 | 41 | - | 38% | -7% |
| Manufacturing | | 2 | 2 | 2 | - | 0% | 0% |
| Agricultural | 11,244 | 8,782 | 4,993 | 4,550 | -22% | -43% | -9% |
| Undeveloped | 602 | 840 | 3,249 | 3,528 | 40% | 287% | 9% |
| Forest Land | 6,607 | 7,017 | 6,582 | 6,018 | 6% | -6% | -9% |
| Other | | | 107 | 67 | 0% | - | -37% |
| Total | 18,696 | 18,439 | 17,226 | 16,552 | | | |

*Source: WI DOR Final Statement of Assessment Report. 1980, 1990, 2000, 2005.*

## Building Permits

As stated above, net building permit data is available from the DOA. This data has been submitted by the jurisdictions that issue building permits. Net building data indicates the net change, not the total number of building permits. Therefore, if a building is demolished within a community, this information is subtracted from the new permit numbers. ***Between 1990 and 2007, 248 net units were added within the Town of Mount Morris. This averages to about 13.8 units per year (units/yr)*** (Table 8-5). The largest growth in single family units occurred during 1993 to 1995. During these three years, an average of 18 units was added per year. It is important to note that the accuracy of the data source is dependent on timely reporting by local officials.

**Table 8-5. Residential Building Permits, 1990 to 2007**

| Year | Additions Number | Deletions Number | Net Number |
|---|---|---|---|
| 1990 | 15 | 0 | 15 |
| 1991 | 9 | 0 | 9 |
| 1992 | 9 | 0 | 9 |
| 1993 | 26 | 0 | 26 |
| 1994 | 19 | 3 | 16 |
| 1995 | 16 | 3 | 13 |
| 1996 | 22 | 6 | 16 |
| 1997 | 19 | 0 | 19 |
| 1998 | 17 | 0 | 17 |
| 1999 | 15 | 5 | 10 |
| 2000 | 16 | 2 | 14 |
| 2001 | 20 | 5 | 15 |
| 2002 | 18 | 3 | 15 |
| 2003 | 17 | 1 | 16 |
| 2004 | 18 | 5 | 13 |
| 2005 | 12 | 6 | 6 |
| 2006 | 15 | 5 | 10 |
| 2007 | 11 | 2 | 9 |

*Source: State of Wisconsin Demographic Services Center Annual Housing Unit Surveys.*

Utilizing ECWRPC, DOR and DOA data, the following trends are apparent between 1980 and 2000: residential land use and commercial land use are increasing while agricultural land uses are decreasing.

## Density and Intensity

### *Density*

Density is broadly defined as "a number of units in a given area".[10] For the purposes of this report, residential densities are defined as the number of housing units per square mile of total land area (units/square mile), excluding water. **Between 1990 and 2000, residential densities increased throughout the county, state, and the Town of Mount Morris.** As the population of the area has grown, so has the overall housing density (Table 8-6). ***Within the Town of Morris, residential densities increased by about 15 percent from 25.34 units per square mile to 29.05 units per square mile during this time period.*** Similarly, residential densities in Waushara County increased by about 12 percent from 19.56 units per square mile to 21.83 units per square mile. While residential densities in Wisconsin increased by about 13 percent from 37.85 units per square mile to 42.74 units per square mile.

[10] Measuring Density: Working Definitions for Residential Density and Building Intensity, November 2003. Design Center for American Urban Landscape, University of Minnesota.

**Table 8-6. Residential Density, 1990 to 2000**

| Jurisdiction | Land Area Sq. Miles | 1990 | | 2000 | |
|---|---|---|---|---|---|
| | | Total Units | Units/Sq. Mi. | Total Units | Units/Sq. Mi. |
| Wisconsin | 54,313.7 | 2,055,774 | 37.85 | 2,321,144 | 42.74 |
| Waushara County | 626.1 | 12,246 | 19.56 | 13,667 | 21.83 |
| Town of Mt. Morris | 34.2 | 867 | 25.34 | 994 | 29.05 |

Source: U.S. Census, 1990, 2000.

### *Intensity*

Intensity is the degree of activity associated with a particular land use. Generally, higher intensity land uses also have higher environmental impacts. Due to limited information available, this report will compare the intensities of single-family versus multi-family developments in the various communities. To calculate land intensities, the ECWRPC categorizes single and two-family residential, farmsteads, and mobile homes as "single family."

Incorporated communities or areas served by public sewer often have more intense development patterns than rural towns. Single-family residential development is typically a less intense land use than multi-family (3 or more units) which is typically restricted to areas on public sewer. According to the 2000 U.S. Census, there are two structures within the Town of Mount Morris that have 3 or more units. Second, incorporated areas in Waushara County are smaller in overall land area than the surrounding towns, resulting in a more intensive land use. Finally, incorporated municipalities, in the county, have areas of older development that were constructed during a period when society was less dependent on cars for transportation. This necessitated the need for smaller lot development that allowed for closer proximity to neighbors and services.

Utilizing 2000 U.S. Census data, in 2001 there were 992 single family units in the Town of Mount Morris on a total of 910.52 acres. ***This resulted in a single family intensity of just over 1 unit per acre in the Town in 2000.*** There were two multi-family units in the Town of Mount Morris in 2000 on a total of 3.82 acres. ***Therefore, the multi-family intensity was 0.52 units per acre in 2000.***

**Table 8-7. Intensity, 2000**

| Municipality | Single Family | | | Multi-Family | | |
|---|---|---|---|---|---|---|
| | Units | Acres | Units/Ac. | Units | Acres | Units/Ac. |
| Town of Mt. Morris | 992 | 910.52 | 1.09 | 2 | 3.82 | 0.52 |

## DEVELOPMENT CONSIDERATIONS

### Recommended State, Regional, and County Goals

State, regional, and county goals were developed to provide communities with a framework on which land use decisions could be based. These goals make the planning process and decision

defensible to the general public when formulating alternate scenarios for developing parcels within a community.

### *State of Wisconsin*

The State of Wisconsin requires that communities address 14 specific goals in their comprehensive plans.[11] These goals encourage development to occur in an orderly well-planned manner. The goals are:

- Promoting the redevelopment of lands with existing infrastructure and public services and the maintenance and rehabilitation of existing residential, commercial, and industrial structures.
- Encouraging neighborhood designs that support a range of transportation choices.
- Protection of natural areas, including wetlands, wildlife habitats, lakes, woodlands, open spaces, and groundwater resources.
- Protecting economically productive areas, including farmlands and forests.
- Encouraging land uses and development patterns that promote cost-efficient government services and utility costs.
- Preserving cultural, historic, and archaeological sites.
- Encouraging coordination and cooperation with neighboring communities.
- Building community identity by improving overall appearance and attractiveness to visitors.
- Providing an adequate supply of affordable housing for all income levels.
- Providing adequate infrastructure, public services, and a supply of affordable land to meet existing needs and accommodate future growth.
- Promoting the expansion or stabilization of the current economic base and the creation of additional and better employment opportunities.
- Balancing individual property rights with community interests and goals.
- Planning and developing a pattern of land use that preserves and creates a pleasing and unique setting.
- Providing all citizens, including those that are transportation dependent, a variety of economical, convenient, and safe transportation options adequate to meet their needs.

### *East Central Wisconsin Regional Planning Commission*

East Central Wisconsin Regional Planning Commission has developed a regional comprehensive plan.[12] As a part of this planning process, East Central has identified several key land use goals:

- Educate the public on potential conflicts and trade-offs associated with alternative development patterns.
- Encourage efficient development in order to reduce land use conflicts and contain community costs.
- Encourage actions and incentives which preserve and protect natural and cultural resources.

[11] *Wisconsin State Statutes 66.1001.*
[12] ECWRPC, 2008. *Milestone Report #3: Goals, Strategies and a Plan for Action.*

- Educate all decision makers regarding what their property rights are and how they can influence the public arena.
- Educate the public on potential cultural, economic and land use conflicts.
- Encourage intergovernmental cooperation and coordination.
- Encourage building code standards which preserve historical and cultural character.
- To protect and improve the aesthetic qualities and high-value scenic resources of the region and its communities while balancing the needs of private industry, government, and the general public.
- Identify techniques, which can be used to preserve local community character.
- Encourage a balance between individual property rights and community interest and goals.
- Encourage public participation in comprehensive planning.
- To ensure the region and its communities develop in a manner which is sustainable in nature.
- Comprehensive plan updates have considered the voluntary incorporation of sustainable concepts.
- Communities are informed and educated on the benefits of developing sustainable plans and regulations.

### *Waushara County*

The Waushara County Zoning Ordinance has identified the following criteria for all unincorporated areas within the county:

- Promote and protect public health, safety, comfort, convenience, prosperity, aesthetics, and other aspects of general welfare.
- Establish reasonable standards to which buildings and structures shall conform.
- Regulate and restrict lot coverage and population density.
- Conserve the value of land and buildings.
- Guide the proper distribution and location of land use patterns.
- Promote safety and efficiency of transportation networks.
- Provide adequate light, air, sanitation, and drainage.
- Prevent the uncontrolled use of shorelands and pollution of the navigable waters of the county.
- Encourage the preservation, conservation, and development of land areas for a wide range of natural resources.
- Minimize expenditures of public funds for flood control projects; rescue and relief efforts undertaken at the expense of the taxpayers; business interruptions and other economic disruptions; damage to public facilities in the floodplain; and minimize the occurrence of future flood blight areas.
- Discourage the victimization of unwary land and homebuyers.

## Local Land Use Issues

### Environmental Impacts and Public Utilities

***Development costs vary based on density, design, social, economical, political and environmental constraints.*** Public opposition can increase costs through project delays. Development often necessitates the expansion of public infrastructure such as sewer, water,

streets, schools, parks and services such as fire and police protection. Increased development can infringe on wetland and floodplain areas, destroy wildlife habitat, and increase runoff to streams and lakes.

To protect and enhance the natural resource base, communities should identify and protect environmental corridors found within the planning area. Environmental corridors are areas in the community that contain and connect natural areas, open space, and other resources. They often lie along streams, rivers, and other natural features. Environmental corridors provide a beneficial buffer between sensitive natural resources and human development. These areas can provide flood control and valuable wildlife habitat and can significantly benefit the aesthetic appeal of the community.

### Land Supply

***The amount of land available for development within the Town of Mount Morris is finite.*** Factors that limit the amount of developable land include environmental restrictions (floodplains, high groundwater, wetlands, steep slopes, and water quality), zoning (setbacks, conservancy and development easements, permitted uses), and conflicts between uses.

### Market Trends

The price of developable land varies depending on the surrounding land uses, location, access, services, and other subjective factors. Natural amenities such as water frontage, forests, and open space may increase the overall value. Land prices are subject to market demand and fluctuations. As such, land values show periodic variations. Housing affordability is dependant on land prices.

The Wisconsin Department of Revenue (DOR) annually reports equalized value as set by the department by real estate class per municipality in Wisconsin. Table 8-8 shows the equalized value of all classes of land in the Town of Mount Morris and Waushara County. Overall, both the Town and County experienced increases in land value between 1998 and 2008. ***During this time period, the value of land in the Town of Mount Morris increased by 265 percent, while land values in the County went up by 103 percent.*** Years of largest increases for Waushara County occurred in 2001 and 2008, while years of largest increases occurred in 2003, 2006 and 2008 for the Town of Mount Morris. In 2001 and 2008, land values in the Waushara County increased by 22 percent and 13 percent respectively, while land values increased by 10 percent and 30 percent in the Town of Mount Morris. In 2003 and 2006, land values increased by 20 percent and 22 percent respectively in the Town, at the same time that land values increased by only 8 percent for the County. ***As a result, from 2006 to 2008, the town's land value (43.7%) increased at a noticeably greater rate than the County (19.8%), indicating that land in Mount Morris is appreciating more rapidly and in greater demand.***

**Table 8-8. Equalized Values, 1998 to 2008**

| Year | Town of Mt. Morris Land Value | Percent Increase | Waushara County Land Value | Percent Increase |
|---|---|---|---|---|
| 1998 | 38,498,600 | - | 494,927,000 | - |
| 1999 | 44,756,800 | 16% | 531,492,800 | 7% |
| 2000 | 49,470,000 | 11% | 532,430,300 | 0% |
| 2001 | 54,375,900 | 10% | 649,433,500 | 22% |
| 2002 | 60,413,100 | 11% | 684,983,500 | 5% |
| 2003 | 72,379,100 | 20% | 737,864,100 | 8% |
| 2004 | 77,867,900 | 8% | 758,648,000 | 3% |
| 2005 | 80,009,700 | 3% | 774,526,900 | 2% |
| 2006 | 97,851,200 | 22% | 838,017,300 | 8% |
| 2007 | 108,112,500 | 10% | 890,245,700 | 6% |
| 2008 | 140,580,100 | 30% | 1,003,757,200 | 13% |

*Source: WDOR: Statement of Equalized Values; 1998 - 2008.*

State of Wisconsin housing statistics supplied by the Wisconsin Realtors Association's provides information on the number of home sales and median price over a period of time. ***Between 1998 and 2008 there were 2,666 home sales in Waushara County, with an average of 242 home sales per year*** (Table 8-9). ***During this time period the median sale price increased from $81,800 in 1998 to $105,000.*** This represents a 28 percent increase.

**Table 8-9. Waushara County Home Sales, 1998 to 2008**

| Year | Number of Home Sales | Median Sale Price |
|---|---|---|
| 1998 | 176 | $81,800 |
| 1999 | 226 | $82,100 |
| 2000 | 235 | $86,600 |
| 2001 | 198 | $98,600 |
| 2002 | 234 | $95,700 |
| 2003 | 250 | $107,700 |
| 2004 | 314 | $97,100 |
| 2005 | 261 | $131,100 |
| 2006 | 296 | $121,800 |
| 2007 | 278 | $109,100 |
| 2008 | 198 | $105,000 |

*Http://www.wra.org/Consumer_Resources/about/housingstats.asp*
Note: Fourth quarter information note available for 1998
and is not included in total.

## Energy Demands

***Development is dependant on the availability of a cost-effective, abundant, efficient energy supply.*** Industry needs to know that reliable energy will be available to run equipment and people rely on affordable energy to heat and power their homes. Not only is energy important for heating and power, but the cost and availability of gasoline may also impact development in Mount Morris. Tourism is a major revenue generator for the county, and many people within the county also regularly commute to work. Over half the people in

the county regularly travel further than 27.1 minutes to work. In 2000, there were about 502 seasonal units in Mount Morris. ***An increase in gas prices may cause some residents to move closer to their place of employment and out of Waushara County or cause others to consider closer locations from home for their vacation destinations.*** Therefore, energy availability can have an impact on new and sustained development in the Town.

## FUTURE LAND USE PROJECTIONS

Wisconsin statutes require comprehensive plans to include five year projections for residential, commercial, industrial, and agricultural uses over the length of the plan.[13] A summary of future land use projections and criteria follows.

While projections can provide extremely valuable information for community planning, by nature, projections have limitations which must be recognized. First and foremost, projections are not predictions. Projections are typically based on historical growth patterns and the composition of the current base. Their reliability depends to a large extent on the continuation of those past growth trends. Second, projections for small communities are especially difficult and subject to more error, as even minor changes can significantly impact growth rates. Third, growth is also difficult to predict in areas which are heavily dependent on migration, as migration rates may vary considerably based on economic factors both within and outside of the area.

The actual rate of growth and amount of future growth communities experience can be influenced by local policies which can slow or increase the rate of growth. Regardless of whether communities prefer a no growth, low growth or high growth option, it is recommended they adequately prepare for future growth and changes to provide the most cost-effective services possible. Furthermore, individual communities can maximize the net benefits of their public infrastructure by encouraging denser growth patterns which maximize the use of land resources while minimizing the impact on the natural resource base.

Expected increases in residential and commercial acreage and resulting decreases in agricultural acreage can be estimated by analyzing and projecting historical data into the future. An anticipated range of population and housing growth and the amount of land that would be required to accommodate that increase in growth were made using past housing and population trends and future population and household projections.

***In 2000, 1,092 permanent residents resided in the Town of Mount Morris. A total of 994 dwelling units (992 single family and 2 multi-family) existed in the Town.***[14] ***Of these units, 481 dwelling units were occupied year round and 513 were vacant.*** Vacant units are comprised of seasonal units and other (for rent, for sale, other). 468 units or 91.2 percent of the vacant units were considered seasonal in 2000. The 481 occupied dwelling units (households) had an average household size of 2.27 people. Based on ECWRPC projections, ***the population is expected to increase by 278 to 1,370 people by 2030; these people are expected to live in a total of 666 households.*** Due to a number of

[13] *Wisconsin State Statutes 66.1001.*
[14] U.S. Census 2000.

reasons including the aging population base and a decrease in the number of children that people are having, the average household size is expected to decrease to 2.06 people per housing unit. It is important to remember that the number of total dwelling units does not equal the total number of households. The total number of dwelling units in the Town is a combination of occupied units and vacant units (for sale, rent, seasonal and other), while the total households is equal to the number of occupied dwelling units. ***Assuming a constant vacancy rate of 51.6 percent (vacancy rate from 2000 Census held constant), it is anticipated that there will be a total of 1,376 dwelling units in the Town of Mount Morris by 2030 or 382 new units (1,376-994).*** Maintaining the current split between single family and multi-family, it is assumed that ***there will be a total of 1,373 single family units or 381 additional (1,373-992) in 2030. The remaining 3 units will be multi-family (1,376-1,373). Since there are currently two multi-family units in the Town of Mount Morris, an additional one unit of multi-family will be added in the Town by 2030. Over a 30 year period this assumes that an average of 12.7 dwelling units will be added in the Town per year.***

Historical building permit data from the DOA indicates that between 1990 and 2007, a net total of 248 units (Table 8-5) were added in the Town of Mount Morris (13.8 dwelling units per year). According to U.S. Census data, a total of 127 additional dwelling units were built in the Town between 1990 and 2000 (12.7 dwelling units per year). While historical building permit data from DOA and the U.S. Census indicates that Town averaged 12.7 to 13.8 dwelling units per year between 1990 and 2000/2007, these trends may not continue.

Based on existing information, there are approximately 992 single/two-family residential units in the Town[15] that occupied approximately 911 acres.[16] As a result, the average size of a single/two-family residential parcel in the Town of Mount Morris is approximately 1.0 acres. According to the 2000 U.S. Census and ECWRPC existing land use, there are two multi-family units in the Town that occupied about 3.8 acres. Per the Town of Mount Morris Land Management Plan[17], future residential land use is to occur within platted areas and within areas of rural open space character on a minimum parcel size of 5 acres or greater. ***Therefore future single family residential land use was calculated utilizing one dwelling unit per acre (Table 8-10; existing density and minimum lot size for general agricultural zone), two units acre (Table 8-11; minimum lot size for a RS-20 zone is 20,000 sf) and 0.2 units per acre (Table 8-12; 5 acre lots). This means that the Town of Mount Morris would likely experience an increase of about 257 to 2,573 acres of new single family residential growth depending on the density selected. This assumes a 15 percent infrastructure and 20 percent market factor.***

***Multi-family land use was calculated assuming that the one additional unit of multi-family would be added at the same density as the existing (0.5 units per acres). Assuming a 15 percent infrastructure and 20 percent market factor 0.7 acres of multi-family development will be added over the life of the plan.*** Future commercial and industrial growth was estimated using a ratio of existing population to existing commercial and industrial land use and projecting it forward based on future population estimates. ***It is assumed that about 6.4 acres of commercial and 3.8 acres of industrial development***

[15] U.S. Census 2000.
[16] ECWRPC existing land use 2000.
[17] Town of Mount Morris Land Management Plan, ECWRPC. 2002

***will be added over the life of the plan.*** Future agricultural land use was calculated based on the assumption that the majority of future development would occur in areas that are currently wooded or farmed. The 2000 land use indicates that if these two land use categories are compared, about 85 percent would be wooded and 15 percent would be agricultural. ***Based on these assumptions approximately 40 to 388 acres of agricultural land use will be lost over the life of the plan.***

## Land Use Issues and Conflicts

In order to avoid future land use conflicts, neighboring towns should establish a communication process to determine the potential effects of new developments within 300 feet of their common border. By doing so, the impacts of the development will be more likely to be minimized.

Waushara County communities, sanitary districts, school districts, planning commissions and others should monitor and provide comments to communities and the County during the ongoing comprehensive planning process which is currently underway. Potential land use

conflicts may arise as new development occurs. Local officials and county employees will need to collaborate to ensure that the overall density of development within the towns is consistent with the overall land use visions.

Natural resource preservation and development may be in conflict with each other. High quality wetlands, floodplains, and other features comprise the natural resource base. Increased development near these resources could lead to displacement of wildlife; degradation of surface and groundwater; and loss of forest, farmland and other open lands and resources.

Incompatibilities may arise between adjacent land uses as development continues. Future land use maps designate specific areas for various uses. To minimize these conflicts, other land use controls such as setbacks, screening, and buffering should be utilized to limit potential conflicts. Many of these controls are detailed within the respective zoning ordinances. Any subdivision that is approved should be designed in a manner that preserves the rural character of the area while enhancing the natural resource base.

## Key Findings

### Existing Land Use

- The Town of Mount Morris existing land use map was last updated in 2000.
- The land use categories are agricultural, residential, commercial, industrial, transportation, utilities/communications, institutional facilities, recreational facilities, water features, woodlands and other open land.
- The Town of Mount Morris encompasses approximately 22,584 acres. Approximately nine percent (9.2%) of the total area is developed.
- Overall, woodlands (planted and unplanted) accounts for 63 percent (63.0%) of the total land use, while cropland (irrigated and non-irrigated) makes up another 13 percent (13.1%).

### Zoning

- The Town of Mount Morris adheres to Waushara County Zoning regulations.
- The predominant zoning district in the Town is General Agriculture. This category comprised 84.7 percent of the area in the Town of Mount Morris in 2008.

### Development Trends

- The earliest inhabitants of Waushara County were Native Americans.
- By the late 1840's and early 1850's, farming communities centered around small villages and hamlets could be found in the county.
- In the 1880's, the county experienced a surge of activity with the coming of the railroad and the discovery of red granite.
- Today, agriculture and tourism has grown to become the county's major industries.
- Large portions of farm and woodlands are being converted to small parcel residential development.

### Land Use Trends

- According to data collected by ECWRPC, residential, commercial, institutional facilities, and industrial increased, while parks and cropland decreased between 1980 and 2001.
- According to data collected by the DOR, residential and commercial acreages are increasing, while agricultural acres are decreasing.

### Building Permits

- According to the DOA, between 1990 and 2007, 248 net units were added within the Town of Mount Morris. This averages to about 13.8 units per year (units/yr).

## *Density and Intensity*

- Between 1990 and 2000, residential densities increased throughout the county, state, and the Town of Mount Morris. Within the Town of Morris, residential densities increased by about 15 percent from 25.34 units per square mile to 29.05 units per square mile during this time period.
- This resulted in a single family intensity of just over 1 unit per acre in the Town in 2001.
- The multi-family intensity was 0.52 units per acre in 2000.

### Local Land Use Issues

- Development costs vary based on density, design, social, economical, political and environmental constraints.
- The amount of land available for development within the Town of Mount Morris is finite.
- Between 1998 and 2008, the value of land in the Town of Mount Morris increased by 265 percent, while land values in the County went up by 103 percent.
- From 2006 to 2008, the town's land value (43.7%) increased at a noticeably greater rate than the County (19.8%), indicating that land in Mount Morris is appreciating more rapidly and in greater demand.
- Between 1998 and 2008 there were 2,666 home sales in Waushara County, with an average of 242 home sales per year. During this time period the median sale price increased from $81,800 in 1998 to $105,000 in 2008.
- Development is dependant on the availability of a cost-effective, abundant, efficient energy supply.
- An increase in gas prices may cause some residents to move closer to their place of employment and out of Waushara County or cause others to consider closer locations from home for their vacation destinations.

### Future Land Use Projections

- In 2000, 1,092 permanent residents resided in the Town of Mount Morris. A total of 994 dwelling units (992 single family and 2 multi-family) existed in the Town. Of these units, 481 dwelling units were occupied year round and 513 were vacant.
- The population is expected to increase by 278 to 1,370 people by 2030; these people are expected to live in a total of 666 households.

- Assuming a constant vacancy rate of 51.6 percent (vacancy rate from 2000 Census held constant), it is anticipated that there will be a total of 1,376 dwelling units in the Town of Mount Morris by 2030 or 382 new units (1,376-994).
- There will be a total of 1,373 single family units or 381 additional (1,373-992) in 2030.
- The remaining 3 units will be multi-family (1,376-1,373). Since there are currently two multi-family units in the Town of Mount Morris, an additional one unit of multi-family will be added in the Town by 2030.
- Over a 30 year period this assumes that an average of 12.7 dwelling units will be added in the Town per year.
- Future single family residential land use was calculated utilizing one dwelling unit per acre (Table 8-10; existing density and minimum lot size for general agricultural zone), two units acre (Table 8-11; minimum lot size for a RS-20 zone is 20,000 sf) and 0.2 units per acre (Table 8-12; 5 acre lots). This means that the Town of Mount Morris would likely experience an increase of about 257 to 2,573 acres of new single family residential growth depending on the density selected. This assumes a 15 percent infrastructure and 20 percent market factor.
- Multi-family land use was calculated assuming that the one additional unit of multi-family would be added at the same density as the existing (0.5 units per acres). Assuming a 15 percent infrastructure and 20 percent market factor 0.7 acres of multi-family development will be added over the life of the plan.
- It is assumed that about 6.4 acres of commercial and 3.8 acres of industrial development will be added over the life of the plan.
- Approximately 40 to 388 acres of agricultural land use will be lost over the life of the plan.

## INTERRELATIONSHIPS WITH OTHER PLAN ELEMENTS

Land use cannot be considered in isolation from other elements. Economic development; housing; transportation; community and public facilities; and agricultural, natural and cultural resources all interact with one another. A vibrant economy brings people to the area in search of jobs and housing. Additional jobs may require the construction of more businesses, while additional people may demand other housing and services. Infrastructure such as roads and sewer and water extensions may be needed to serve these areas and people. This development may impact existing farm lands, forest areas, and other natural features.

### Economic Development

Commercial and industrial land uses should be located in areas that are compatible with adjacent land uses, minimize environmental impacts, and utilize existing infrastructure. Additionally, industrial and concentrated commercial land uses should be situated in areas, if possible, where public sanitary sewer and water are available. While public sewer is not available in the Town of Mount Morris, commercial and light industrial uses should be concentrated near similar land uses.

### Housing

It is critical that an adequate supply of reasonably priced land be available for residential development. The amount of land that is required depends on the density, design, and

placement of development. Residential development should be placed to minimize environmental impacts and utilize existing infrastructure. Scattered residential development increases the cost to provide public services such as fire, police and emergency protection; consumes and fractures large tracts of agricultural and forested areas; and increases conflicts between agricultural and residential uses.

Demand for property with access to natural resources has driven up land values and the cost of housing in the area. New residential development may not be affordable to residents who depend on the area for jobs. The provision of a mix of residential units must be available for all income ranges. Affordable housing including smaller homes on smaller lots and reasonably priced rental properties must be provided for individuals on low or fixed incomes. These areas should be located within walking distance of schools, stores, and other services.

### Transportation

A well planned transportation system provides access to housing, schools, work and through traffic. As part of this transportation system, bike and pedestrian facilities should be expanded in existing areas to provide safe access to schools and business. When new subdivisions or roads are built or existing roads are reconstructed, pedestrian and bike access should be incorporated into these new designs.

Communities should carefully consider the creation of a system of recreational trails for both non-motorized and motorized traffic. Bicycling and pedestrian trails provide alternative transportation methods for local residents and potential tourist attractions. A year-round trail system for ATVs will also increase recreational opportunities for local residents and tourists alike.

### Utilities and Community Facilities

New development should occur in proximity to existing infrastructure. Unsewered development should not be allowed to occur in areas that can be cost effectively and readily served by public sewer. In rural areas, scattered residential development increases the cost or makes costs prohibitive for services such as fire, police and emergency protection and public transportation (school bus and elderly/disabled). The road network should provide easy access to all areas as valuable time is lost when emergency vehicles must travel on winding local roads.

### Agricultural Resources

Agriculture not only supports the economy of the county, but also defines the rural character that residents of the area value. The county is experiencing a decrease in the number of farming operations as farmland is converted to other uses. Farmland areas are being fragmented by scattered residential development which often results in agriculture operational conflicts and limits farm expansion for farmers who wish to remain in farming.

### Natural Resources

An abundance of natural resources including Lake Poygan, Willow Creek, the Fox River, streams, woodlands, wetlands, wildlife habitat, agricultural land and other open spaces can be found in the area. People who visit and live in the area value these resources. Increased

development can adversely affect these very resources that drew people to the area and caused them to remain. New development should be directed away from sensitive environmental areas including floodplains and wetlands. Care should be taken to minimize the effects of new construction on the existing environment by strictly enforcing erosion control practices. Older septic systems should be inspected regularly to minimize the consequences of failing systems on water quality.

### Cultural Resources

The historical past of the area helps to define the present. Care should be taken to preserve, protect, and enhance the cultural resources, historic areas, and buildings that remain. New development should be incorporated into existing development so that it enhances the historic components that remain. The downtown areas of Tustin, West Bloomfield and Auroraville could be developed to enhance the historical significance of the area.

### Intergovernmental Cooperation

Land use decisions that are made within one municipality often affect the decisions and land use of another. For example, the development of a heavy industrial activity near the border of one community has the potential to affect the land use, natural resources and economy of an adjacent community. In this example, a residential use may not be compatible with the heavy industrial use, the industry may pollute a stream that flows through another community, or the business may purchase raw products or supplies from a business in an adjacent community. To minimize conflicts, communities should solicit input and find an effective form of communication with neighboring communities and residents.

## POLICIES AND PROGRAMS

### Regional, County and Local Policies

#### *Zoning Ordinances*

The Wisconsin enabling legislation requires that zoning ordinances must be reviewed and modified if necessary to be consistent with a community's comprehensive plan.

Local municipalities and counties can enact wind energy zoning ordinances to proactively plan for siting future wind energy projects.[18] Wind energy zoning ordinances can establish setbacks from property lines, roads, communication and electricity transmission systems, and residential structures. Additionally, setbacks can be established for undeveloped residential properties. Although noise level effects may be difficult to determine due to differences between individuals, it is possible to establish maximum allowable decibel levels at residential dwellings and specific public facility sites. Height restrictions can be placed on individual turbines. Height restrictions must be used cautiously since a restriction could lead to an increased number of turbines and decreased land use efficiencies. Several safety features can be incorporated into a zoning ordinance. For example, restrictions can be placed controlling the accessibility (lockable, non-climbable towers), electrical connection systems, and appropriate warning signage

[18] *Wisconsin State Statutes 66.0401.*

installation to cite a few examples. Ordinances can also include specific plans for site reclamation if a turbine is abandoned or its use is discontinued.
Other zoning tools can also be utilized to limit the number of potential sites for wind energy facilities. Extra-territorial airport zoning can restrict the maximum height of structures to a distance of three miles from a public airport facility. In addition, overlay zoning can be utilized to further protect significant natural or cultural resources by limiting the conditional uses within a specific area.

### *County Policies*

**County Zoning.** The Waushara County Code of Ordinances regulates private on-site wastewater treatment systems, land divisions and land uses. A few of the chapters that relate to land use are summarized below.

**Waushara County Utilities Ordinance** is contained within Chapter 54 of the Waushara County Code of Ordinances. This ordinance regulates all private on-site wastewater treatment systems within the county. Although this ordinance does not directly determine land uses, it influences the location of future development according to soil suitability.

**Waushara County's Subdivision Ordinance** is contained in Chapter 42 of the Waushara County Code of Ordinances. The ordinance facilitates division of larger parcels of land into smaller parcels of land. Land divisions create less than three lots of 15 acres or less. Land divisions can be classified as either major or minor subdivisions. A major subdivision creates five or more lots which are each 5 acres or less in area by successive divisions within a 10-year period. A minor subdivision contains three or more lots that are 15 acres or less in area by successive divisions within a 10-year period. The ordinance also contains design standards for streets, setbacks, utility easements, stormwater management techniques, and erosion control.

The **Floodplain Zoning Ordinance** is contained within Chapter 18 of the Waushara County Code of Ordinances. The purpose of the floodplain ordinance is to protect life, health, and property; to minimize the costs associated with flood control projects; and to minimize the costs associated with relief and reconstruction efforts. The ordinance regulates residential uses, storage of hazardous materials, sewage disposal, wells for drinking water, and uses mentioned in NR 116.

The **Shoreland Zoning Ordinance** is contained within Chapter 58 of the Waushara County Code of Ordinances. Shorelands are defined as unincorporated areas which are: 1,000 feet from the ordinary high water elevation mark of navigable lakes, ponds, or flowages; or 300 feet from the ordinary high water elevation mark of navigable rivers or streams. If the landward side of the floodplain exceeds either of these two measurements, this is used as the zoning standard. This ordinance controls the lot size, building setbacks, landfills, agricultural uses, alteration of surface vegetation, sewage disposal, filling, grading, lagooning, and other uses which may be detrimental to this area.

Chapter 58 also addresses **wind energy generation facilities**.[19] The existing ordinance permits wind energy facilities for on-premise consumption in areas that have been zoned for either general agricultural (A-G) or forestry (O-F) uses. Off-premise consumption requires a

[19] WCZLC. 2006. *Code of Ordinances: Waushara County, Wisconsin 58.236 (20).*

conditional use. As such, the landscape within these areas must be dominated by agricultural practices or woodlots. Several setbacks, safety restrictions, and ground clearance requirements have been established. The County and local municipalities may wish to collaborate to designate specific sites appropriate for future wind energy facilities.

**Farmland Preservation Plan.** Waushara County adopted the county Farmland Preservation Plan on June 9, 1981.[20] The goal of the plan is to preserve productive and potentially productive agricultural land, forest land, and environmentally sensitive areas while providing other areas for well planned growth in other appropriate areas of the county. Agriculturally productive areas are defined as existing farms consisting of a minimum of 35 contiguous acres of productive farmland. This plan allows farmers in preservation areas to sign agreements on a voluntary basis under the state's Farmland Preservation Act for tax credits.

**Pine River/Willow Creek/Poygan South Priority Watershed Plan.** The Pine River/Willow Creek/Poygan South Priority Watershed was selected as a priority watershed in 1995.[21] The watershed drains 308 square miles in Waushara and Winnebago Counties. Both waterways are clear, hard water streams that drain the southern two-thirds of Waushara County. The local soils, geology, and other physical resources present in the watershed are highly susceptible to groundwater and surface water contamination from poor land use practices. The high occurrence of agricultural uses exacerbates this vulnerability. The overall goal of the High Priority Watershed program is to reduce sedimentation and nutrient loading to local water resources. The project will end in 2009. In 1997, the Pine River/Willow Creek/Poygan South Priority Watershed Plan was adopted to protect these watersheds.

**Land and Water Resource Management (LWRM) Plan.** The Waushara County LWRM plan was written in 1999.[22] In 2005, it was revised in response to a legislative call to redesign Wisconsin's programs to reduce pollution from unknown sources. The revised plan was adopted in February 2006. The plan identifies long term goals and implementation strategies to reduce non-point source pollution into rivers, streams, and lakes in Waushara County. The four goals that were identified include: 1.) Reduce soil erosion and continue to protect natural resources; 2.) protect and enhance in-stream, riparian, wetland and upland habitat; 3.) protect surface waters from construction site erosion control & non-metallic mining; and 4.) implement the animal waste prohibition.

### *Local Policies*

**Official Map.** An official map is intended to implement a master plan for a city, village, or town. The master plan helps direct development by designating areas for streets, highways, parkways, floodplains, and other pertinent land uses. Official maps direct development away from sensitive areas which are designated for future public use. The Waushara County parcel map may serve as a basis for Mount Morris's official map.

[22] WCZLC. 2005. *Waushara County Land and Water Resource Management Plan.* http://www.co.waushara.wi.us/more_lcd.htm.

**Existing Comprehensive/Land Management Plans.** A Community Management Plan for the Town of Mount Morris was completed in 2003. Waushara County is in the process of developing a Comprehensive Plan that will be completed in 2009.

## Federal, State and Regional Programs

### *State of Wisconsin*

**Land and Water Resource Management Planning Program (LWRM).** The land and water resource management planning program (LWRM) was established in 1997 by Wisconsin Act 27 and further developed by Wisconsin Act 9 in 1999.[23] Although both Acts are designed to reduce non-point pollution, Wisconsin Act 27 regulates rural and agricultural sources while Wisconsin Act 9 regulates urban sources.[24] Counties are required to develop and periodically revise LWRM plans. Citizens and professionals in each county identify local needs and priorities in regards to conservation needs through watershed based planning. All LWRM plans must be approved by the Wisconsin Department of Agriculture, Trade, and Consumer Protection.

**Wisconsin Act 204.** Recent blackouts and other incidents throughout the United States have raised concerns regarding both the supply of energy and the adequacy of the transmission grid. Wisconsin Act 204 mandates that a portion of electricity generation facilities be from renewable resources. To ensure that the renewable energy goals set forth in Wisconsin Act 204 are not unduly hindered, the State passed additional legislation restricting the ability of local governments to prohibit or curtail the development of wind and solar energy systems.[25] Municipalities can only impose restrictions on the construction and operation of wind turbines to protect public health and safety. Furthermore, communities cannot impose regulations which increase construction/operation costs, decrease the efficiency of wind generation systems, or specifically prohibit installation of alternate energy systems.

Although traditional approaches such as coal and natural gas are still utilized, other options are being explored that include renewable resources. Under this mandate, other sources of energy such as wind are currently being proposed at several locations throughout Wisconsin. While there is an extensive review process for the placement of large electrical generation facilities, smaller facilities, such as wind turbines, often fall below the size limitation and bypass this review process. Thus, many communities find themselves unprepared to handle future wind turbine proposals.
